

Figure S1. Sequence of enzymatic and chemical processes leading from the main secoiridoids (i.e, oleuropein and ligstroside) contained in olive drupes to the different isomers, named Open/Closed Forms I and II, of major secoiridoids found in EVOO: oleuropein (OA) and ligstroside (LA) aglycones, oleocanthal and oleacin.

1, hydrolysis catalyzed by β -glucosidase; 2, hemiacetal hydrolysis; 3, C-C rotation; 4, 1,4-Michael addition; 5, acid hydrolysis at pH 3-5; 6, keto-enolic tautomerism; 7, demethylation catalyzed by methylesterase; 8, decarboxylation.

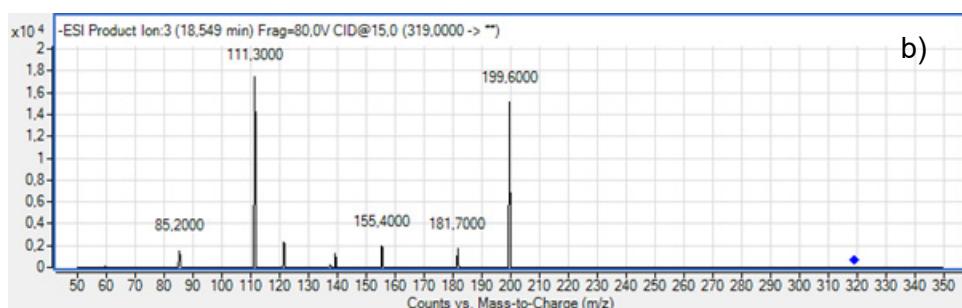

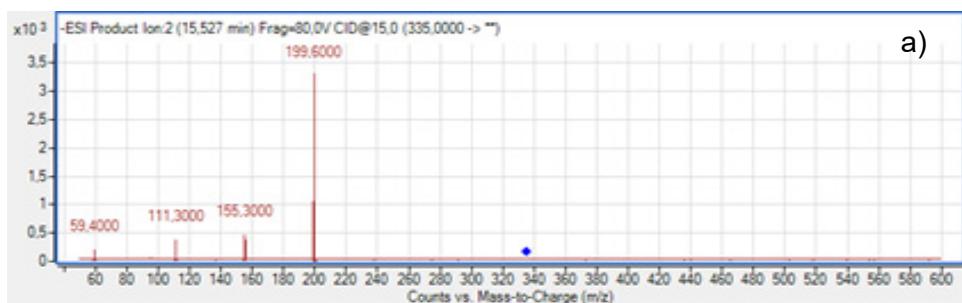

Figure S2. MS/MS spectra of oleacinic acid (a) and oleocanthalic acid (b).

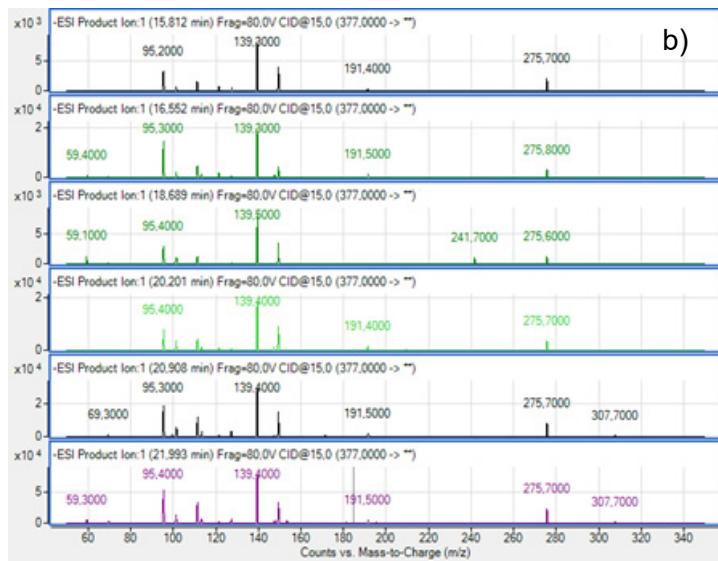

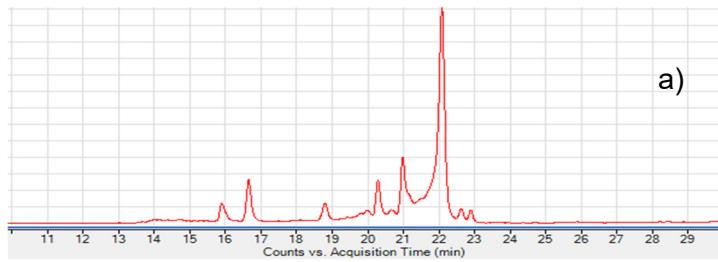

Figure S3. Extracted ion chromatogram (EIC) (a) and MS/MS spectra of oleuropein aglycone (b) at $[\text{M}-\text{H}]^-$ 377.

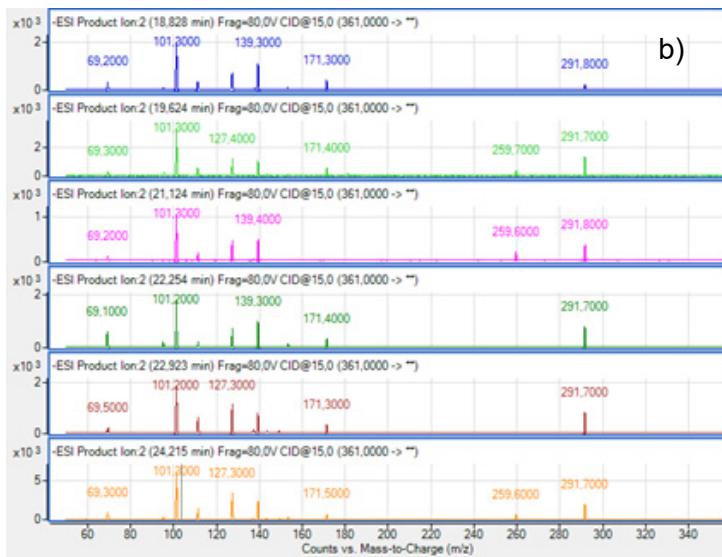

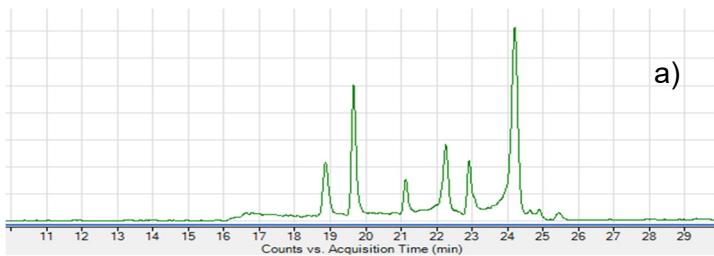

Figure S4. Extracted ion chromatogram (EIC) (a) and MS/MS spectra of ligstroside aglycone (b) at $[M-H]^-$ 361.

Table S1: Acquisition parameters for MRM UHPLC-MS/MS analyses.

compound	Q ₁ (m/z)	Q ₃ (m/z)	Frag (V)	CE (V)	Polarity
Hydroxy-tyrosol	153	123	100	15	negative
Decarboxymethyl-elenolic acid derivative	185	111	100	15	negative
Hydroxylated product of dialdehydic form of decarboxymethyl elenolic acid	199	111	100	15	negative
Tyrosol	137	119	80	15	negative
Decarboxymethyl 10-hydroxy oleuropein aglycone	335	199	80	15	negative
Hydroxy-oleuropein aglycone isomer 1	393	169	80	15	negative
Oleuropein isomer 1	539	113	80	15	negative
Pinoresinol	357	221	80	15	negative
Oleuropein aglycone isomer 1	377	139	80	15	negative
Oleuropein aglycone isomer 2	377	139	80	15	negative
Hydroxy-oleuropein aglycone isomer 2	393	169	80	15	negative
Oleuropein isomer 2	539	113	80	15	negative
Oleacein	319	111	80	15	negative
Oleuropein aglycone isomer 3	377	139	80	15	negative
Ligstroside aglycone isomer 1	361	101	80	15	negative
Luteolin	285	133	100	30	negative
Hydroxy-oleuropein aglycone isomer 3	393	169	80	15	negative
Acetoxy pinoresinol	415	136	100	30	negative
Hydroxy-methyl decarboxymethyl ligstroside aglycone isomer 1	333	111	80	15	negative
Ligstroside aglycone isomer 2	361	101	80	15	negative
Hydroxy-oleuropein aglycone isomer 4	393	169	80	15	negative
Hydroxy-methyl decarboxymethyl ligstroside aglycone isomer 2	333	111	80	15	negative
Oleuropein aglycone isomer 4	377	139	80	15	negative
Hydroxy-methyl decarboxymethyl ligstroside aglycone isomer 3	333	111	80	15	negative

Oleuropein aglycone isomer 5	377	139	80	15	negative
Monoaldehydic ligstroside aglycone isomer 1	361	101	80	15	negative
Apigenin	269	117	100	30	negative
Methoxyluteolin	299	227	100	30	negative
Monoaldehydic oleuropein aglycone	377	139	80	15	negative
Ligstroside aglycone isomer 3	361	101	80	15	negative
Ligstroside aglycone isomer 4	361	101	80	15	negative
Monoaldehydic ligstroside aglycone isomer 2	361	101	80	15	negative

Q₁, parent ion mass; Q₃, daughter ion mass; Frag, fragmentor voltage; CE, collision energy.
