**Figure S1:** Properties of accessory proteins and development of the rMsraB assay **A:** Activity of recombinant Thioredoxin reductase (rTrxR) with NADH or NADPH (substrate: DTNB). **B:** Insulin reduction by isolated rTrx and rTrxe. Activity is determined as an increase over time in the absorbance at 600 nm. **C:** rMsraB assay with rTrxR and rTrx – effect of varying concentrations of rTrx on rMsraB activity. Assay contained 10 mM R/S MPTS, 2  $\mu$ M rMsraB, varying amounts of purified rTrx, 5  $\mu$ M rTrxR and 0.2 mM NADPH in 50 mM sodium phosphate buffer, pH 7.5 **D:** rMsraB calmodulin repair assay including the MsraP control reactions.

**Figure S2:** Changes of rMsrAB activity in thioredoxin-containing assays using R/S-MPTS
