

Figure S1. The photomicrograph of intestinal morphology in piglets dietary supplementation of mulberry leaf powder with varying levels. Ctrl, basal diet with 0% MP; MP_2, MP_4, MP_6, the basal diet supplemented with 2%, 4% and 6% MP, respectively. The images were visualized at 100x magnification and four pairs of villi and crypt were highlighted with blue color. $N = 3$.

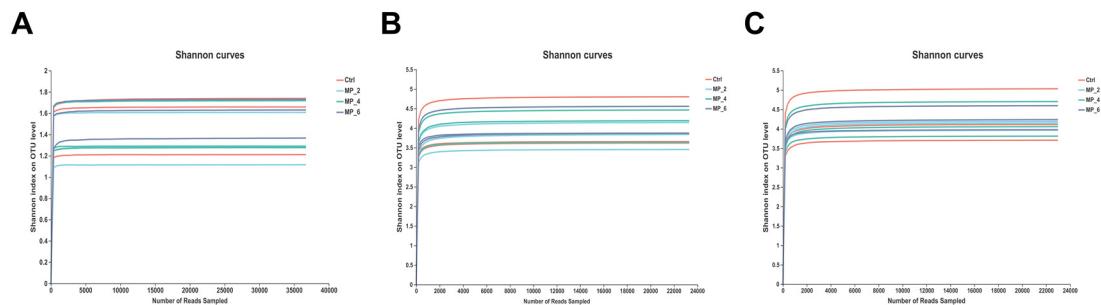

Figure S2. The rarefaction curves of ileum (A), cecum (B) and colon (C) at OTU level in piglets dietary supplementation of mulberry leaf powder with varying levels. All samples of ileum, cecum and colon indicated that the diversity indices increased sharply and eventually flatten, suggesting that the sequencing data were substantial enough for reflecting the majority of microbial diversity information in the samples.

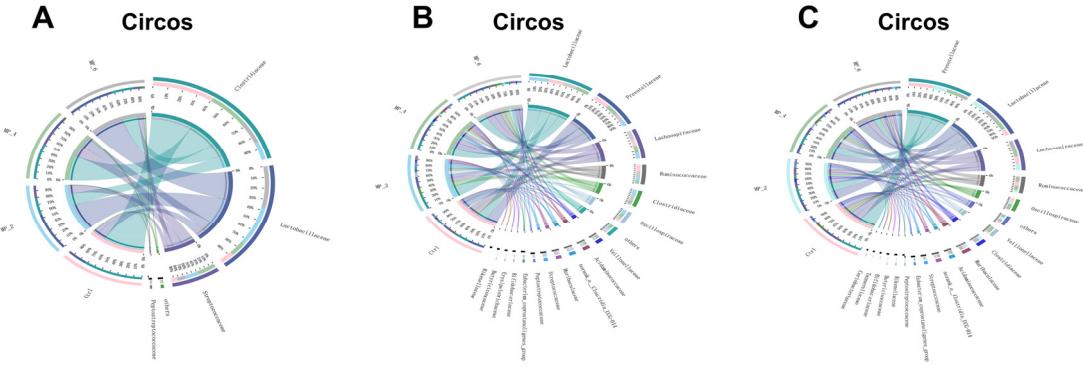

Figure S3: The Circos diagram at family level in ileum(A), cecum (B) and colon (C) of piglets. Ctrl, MP_2, MP_4 and MP_6, basal diets containing 0%, 2%, 4% and 6% of MP, respectively. N=3.

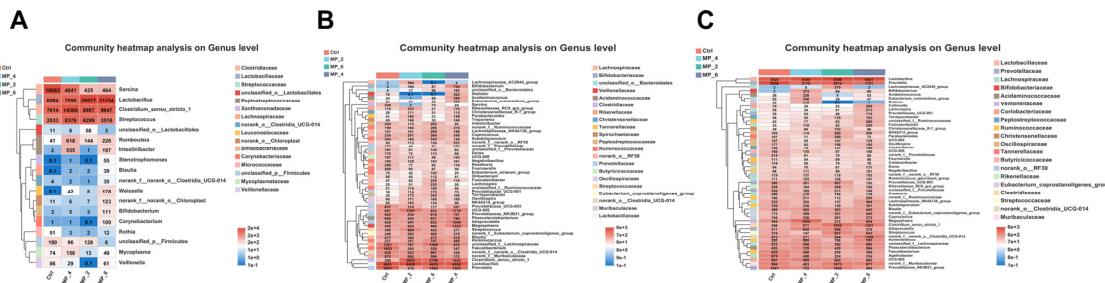

Figure S4: The heatmap analysis at genus level in ileum (A), cecum (B) and colon (C) of piglets. Ctrl, MP_2, MP_4 and MP_6, basal diets containing 0%, 2%, 4% and 6% of MP, respectively. N=3.
