

Title: Complex wavefront shaping through a multi-core fiber

Authors: Jiawei Sun, Nektarios Koukourakis, Juergen W. Czarske

Supporting Video S1:

Rotation control of dual-spot light field through a multi-core fiber with a spatial light modulator. Left: phase modulation frames displayed on the spatial light modulator. Middle: the simulated intensity distribution through a multi-core fiber. Right: experimental intensity distribution through a 50-cm long multi-core fiber with on-the-fly manipulation.
