

Supplemental Material - Video study

Figure S1 – Possible orders of presentations of the stimuli

ORDER OF PRESENTATION	1st stimulus	2nd stimulus	3rd stimulus	4th stimulus
1	Dog1Threatening (D1T)	Dog1Neutral (D1N)	Dog2Threatening (D2T)	Dog2Neutral (D2N)
2	Dog1Neutral (D1N)	Dog1Threatning (D1T)	Dog2Neutral (D2N)	Dog2Threatening (D2T)
3	Dog2Threatning (D2T)	Dog2Neutral (D2N)	Dog1Neutral (D1N)	Dog1Threatening (D1T)
4	Dog2Neutral (D2N)	Dog2Threatening (D2T)	Dog1Neutral (D1N)	Dog1Threatening (D1T)

Table S1 – List of the subjects who participated in the study, sex, age and order of exposure of the stimuli (N= audio natural, A= audio artificial).

subject	age	breed	sex	neutered	order
Sunny	1	Viszla	F	no	3N-3A-2A-2N
Pan	7	Cocker spaniel	F	yes	4A-4N-1N-1A
Kobe	1.5	Flat coated retriever	M	no	1N-1A-4A-4N
Amelia	5	Weimaraner	F	no	2N-2A-3A-3N
Aki	5	Pit bull mix	M	yes	1A-1N-4N-4A
Aron	3	Rhodeyesan ridgeback	M	no	3N-3A-2A-2N
Sibilla	1	Weimaraner	F	no	4N-4A-1A-1N

Quickly	3	Border collie	M	no	2A-2N-3N-3A
Fiamma	3	Vizsla	F	yes	3N-3A-1A-1N
Biagio	2	Weimaraner	M	no	3N-3A-2A-2N
Mabelle	1	Rhodesian Ridgeback	F	no	4A-4N-1N-1A
Penny	4	German Shepherd	F	yes	1N-1A-4A-4N
Milo	4	German Shepherd	M	no	2N-2A-3A-3N
Marek	5.5	German Shepherd	M	no	1A-1N-4N-4A
Sally	7	German Shepherd	F	yes	3N-3A-2A-2N

Table S2 – DogFACS ethogram for the coding of facial related movements.

Category (mutually excludesve behaviours)	Code	Definition	Description	Type of measure
ACTION UNITS (AU)	AU145 (R-L)	Blink	Upper and lower eyelids move towards together until they completely touch each other when the eyes close completely. In the AU145 eyes open again within half a second . The left and right eye can be closed independently (lateralized movement) (AU145-R, AU145-L) or together (AU145).	Event
	AD126	Panting	Tongue's shown, the lower jaw is dropped and there is no sign of tension. The dog breathes quickly and noisily through its mouth, while its chest moves rapidly.	Duration
ACTION DESCRIPTORS (AD)	AD137	Nose lick	The jaw is lowered and the tongue licks the nose. It can be followed by a AD37 but they should be coded separately.	Event
	AD126	Panting	Tongue's shown, the lower jaw is dropped and there is no sign of tension. The dog breathes quickly and noisily through its mouth, while its chest moves rapidly.	Duration

	AD37 (L or R)	Lip wipe (Lips licking) (lateralized movement)	The tongue wipes the lips from the mouth midpoint till the mouth corner. This movement is usually lateralized (AD37-R or AD37-L). If the tongue is licking the lips just at the midpoint code as AD37 .	Event
EAR ACTION DESCRIPTORS (EADs)	EAD101	Ears Forward	The ears are turned or pushed forward (rostrally). In dogs with pricked ears the pinna becomes rigid and tense. In dogs with floppy ears the base of the pinna is raised and pulled forward. Wrinkles may be formed along the midline frontal region.	Duration
	EAD102	Ears Adductor	The ears are adducted, the base of the pinnas become closer together, by being pulled towards the head midline. The distance between the ears decreases. A vertical wrinkle may appear on the frontal region.	Duration
	EAD103	Ears Flattener	Ears are pulled caudally, being flattened against the head. The pinna is pulled caudally, in the direction of the back of the head. In a frontal profile, the ears may disappear from the view.	Duration
	EAD104 (R-L)	Ears Rotator (lateralized movement)	The ears are rotated laterally and externally. Dog can rotate both ears (EAD104) or just one of them (EAD104 L or R). The internal part of the pinna is twisted out and outward-looking.	Duration

	EAD105	Ears Downward	The ears are pulled ventrally, laterally. The base of the pinna in both ears moves away from each other. The distance between the ears increases. The frontal region skin is stretched and the head takes a rounder shape.	Duration
--	--------	------------------	--	----------

Table S3 – General behaviours ethogram for the coding of other general movements.

General Category	Behavior	Description	Type of measure
Position	Stand	The dog stand with all four paws on the ground and does not move.	Duration
	Sit	Stationary position, with only the backside in contact with the ground.	Duration
	Lay	Dog's belly touches the ground as it lays completely down on the floor.	Duration
Looking	Video	The dog keeps its head oriented towards the video screen.	Duration
	Owner	The head of the dog is directed towards the owner.	Duration
	Room	The head of the dog is directed somewhere in the room that is not the owner or the video projector (es. Door, floor)	Duration
Displacement behaviours	Autogrooming	The dog starts licking and wiping its own body in order to clean it.	Duration
	Drinking	Whenever the dog starts drinking water from the bowl.	Duration
	Head_turn	The dog is looking at the stimuli window or at the experimenter (in FH) and averts its gaze moving the head towards the right or the left.	Event
	Paw lifting	The dog lifts one of the front paws, even slightly.	Duration
	Scratching	The dog scratches repeatedly its neck or face with the hind legs.	Duration
	Shaking	Dog's whole body and head starts moving rapidly, from side to side.	Event
	Sniffing Environment	Dog's muzzle gets closer to the floor, the exit room, or other items inside the experimental room, while its nose snuffles it and nostrils moves quickly.	Duration
	Stretching	The whole body is stretched in various ways: forelegs may be leant down while the dog's back is arched; hind legs may be straightened while the head is held up high.	Event

Vocalizations	Whine	The dog starts vocalizing, making persistently whines.	duration
	Growl	Snarling sound directed at something or as a reaction to something in the living environment. Mouth may be open; nose can be wrinkled.	duration
	Bark	Loud and short typical vocalization, which may be repetitive.	duration
