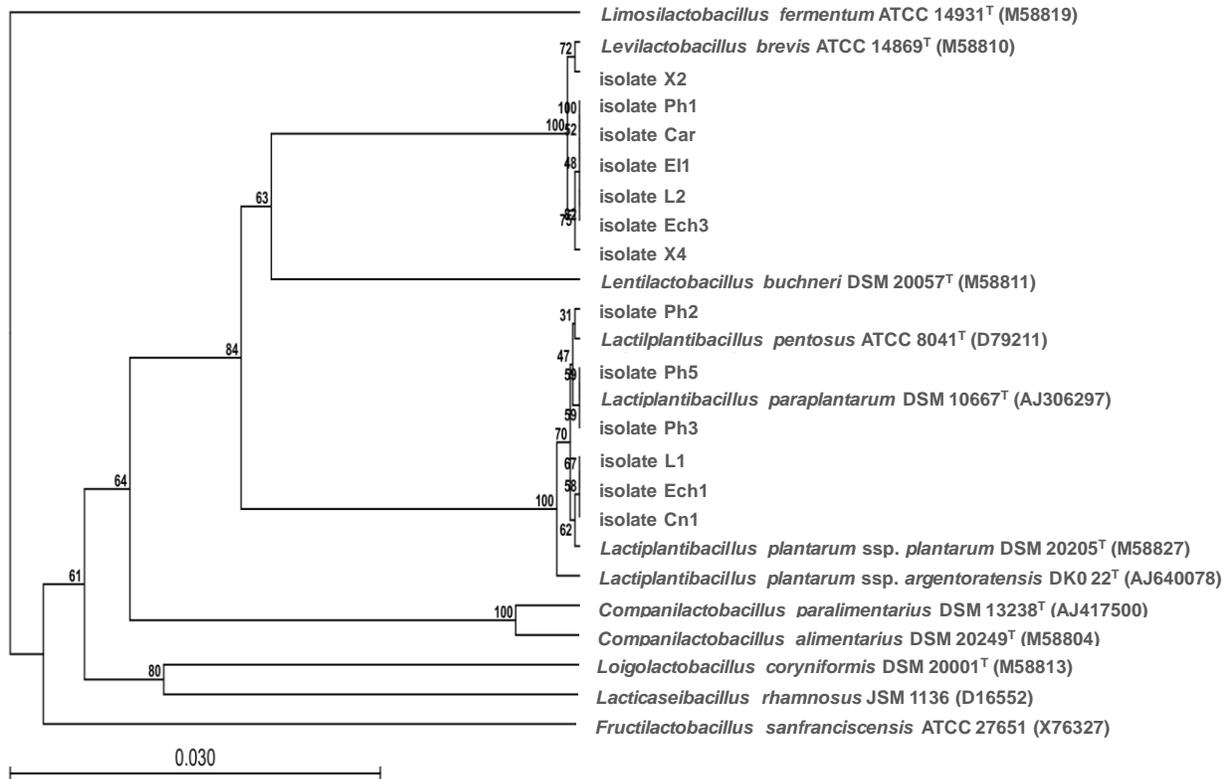

Figure S2. Phylogenetic tree of the most common *Lactobacillus* species found in sourdough and the isolates obtained in this study based on ca. 1356 bp partial sequence of the 16S rRNA gene. The tree was generated by the CLC Sequence Viewer software ver. 6.6.1 (www.clcbio.com, CLC bio A/S) by the UPGMA algorithm. Bootstrap values displayed at nodes were obtained based on 100 replicates. Sequences were derived from GenBank (NCBI). Type strains are labeled with superscript “T”.
