

Supplementary Material

Overall Unadjusted Outcome Responses

This supplementary material presents graphs of the responses to the outcome variables for the total sample used (both Central Park Apartments and Daniell Street combined with Whakahoa Village/Gowerton Place). On the whole, responses are generally positive across the board, except for sense of belonging in the neighbourhood (Figure S4), which are dispersed and mostly clustering around the middle of the 11-point scale with peaks at either extreme (0 and 10), belonging to a neighbourhood group (Figure S5), with almost all respondents not belonging to such a group, and feelings of safety walking at night (Figure S7), which is distributed around the middle option of neither safe nor unsafe.

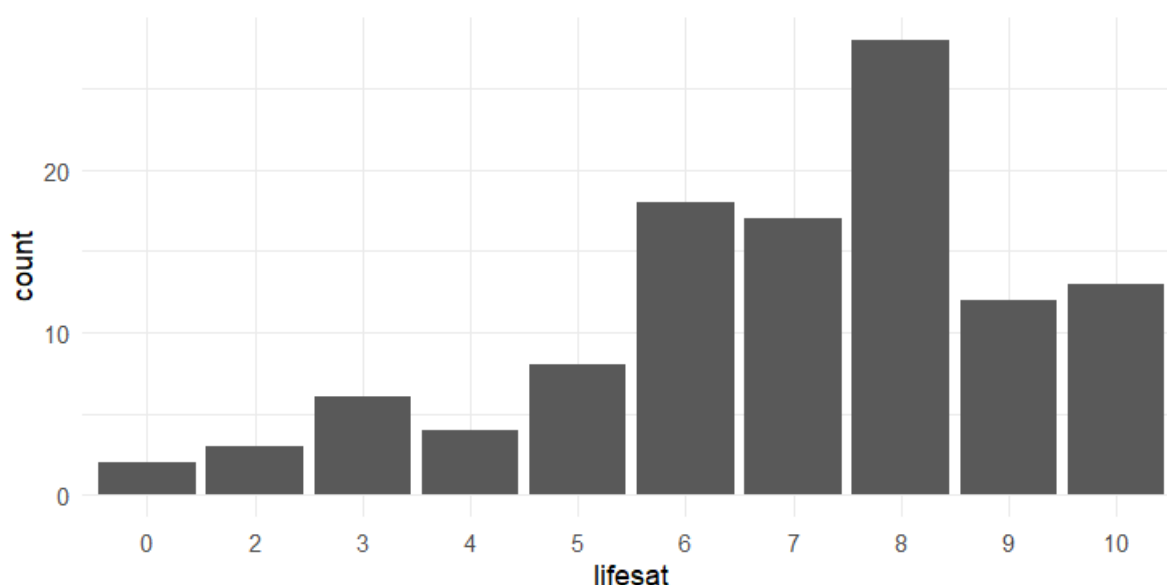

Figure S1. Life satisfaction scores for all respondents in Daniell Street, Gowerton Place/Whakahoa Village and Central Park Apartments. 0 = completely dissatisfied, 10 = completely satisfied.

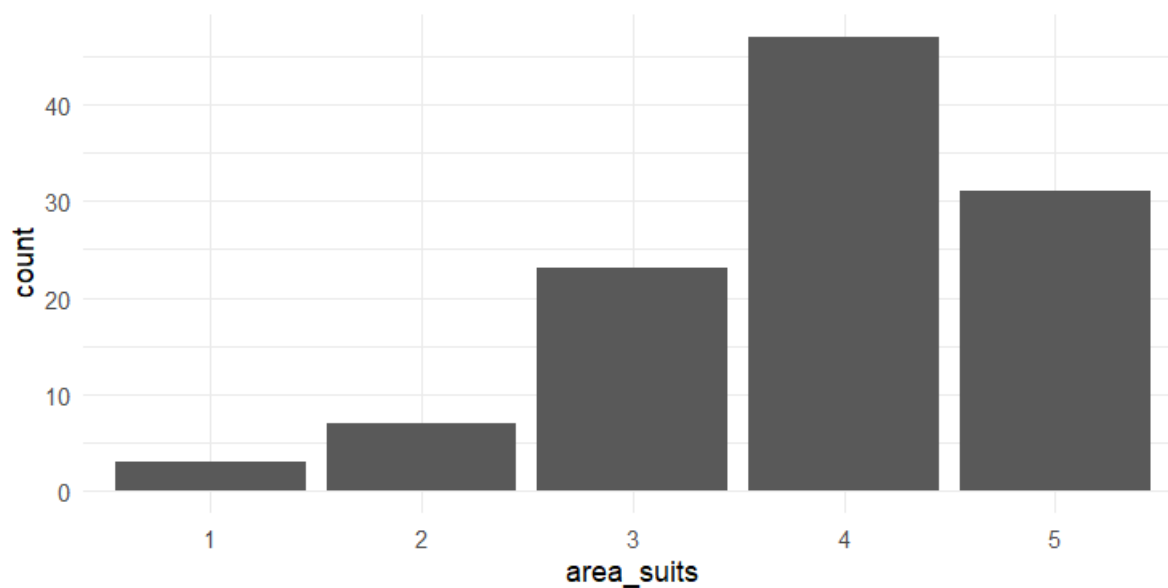

Figure S2. Area suits needs for whole sample. 1 = strongly disagree, 5 = strongly agree.

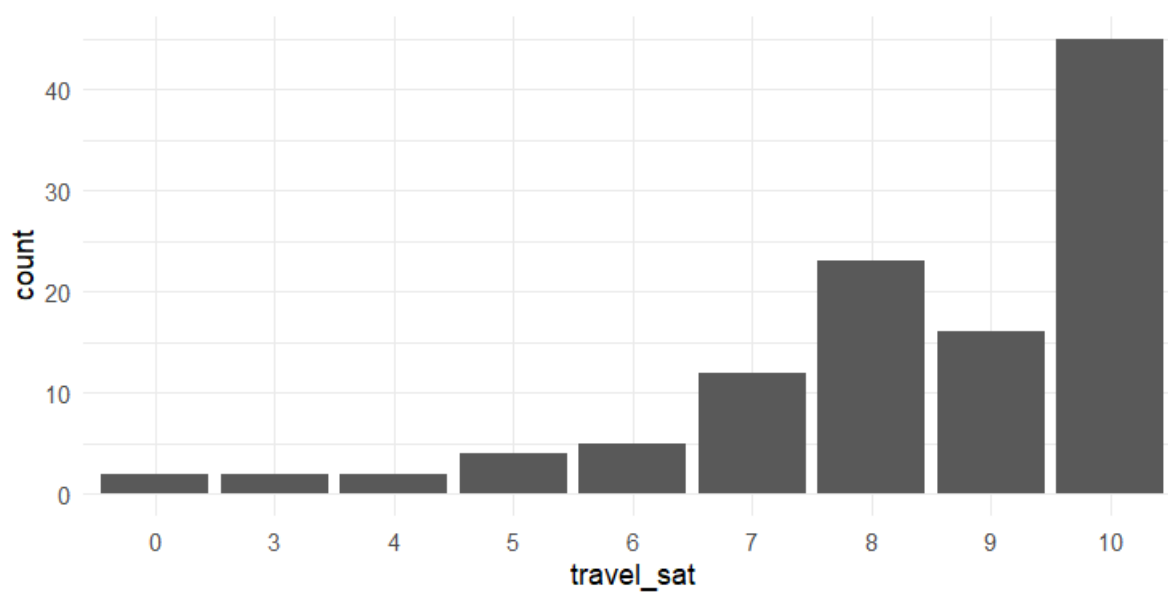

Figure S3. Overall satisfaction with area in terms of ability to travel. 0 = completely dissatisfied, 10 = completely satisfied.

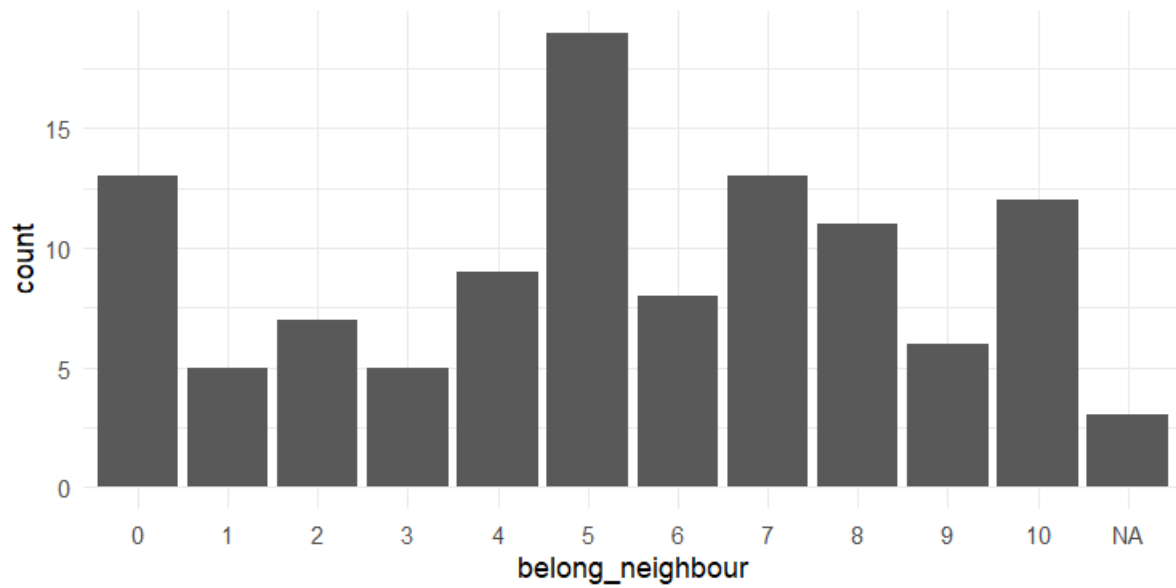

Figure S4. Overall sense of belonging to neighbourhood. 0 = no sense of belonging, 10 = very strong sense of belonging.

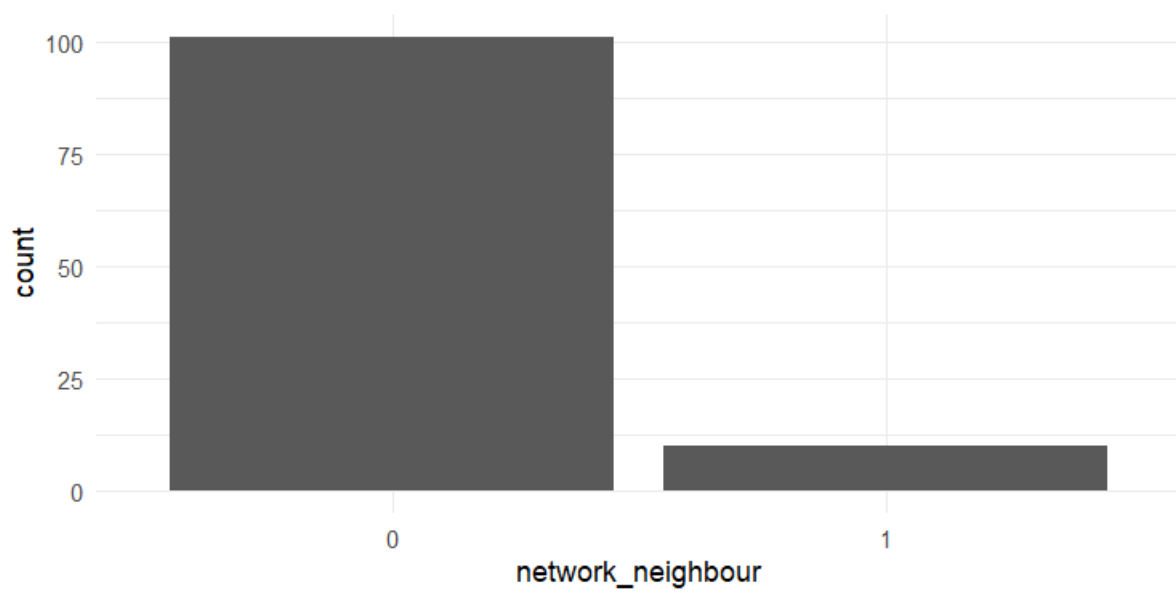

Figure S5. Respondents who belong to neighbourhood group. 0 = no, 1 = yes.

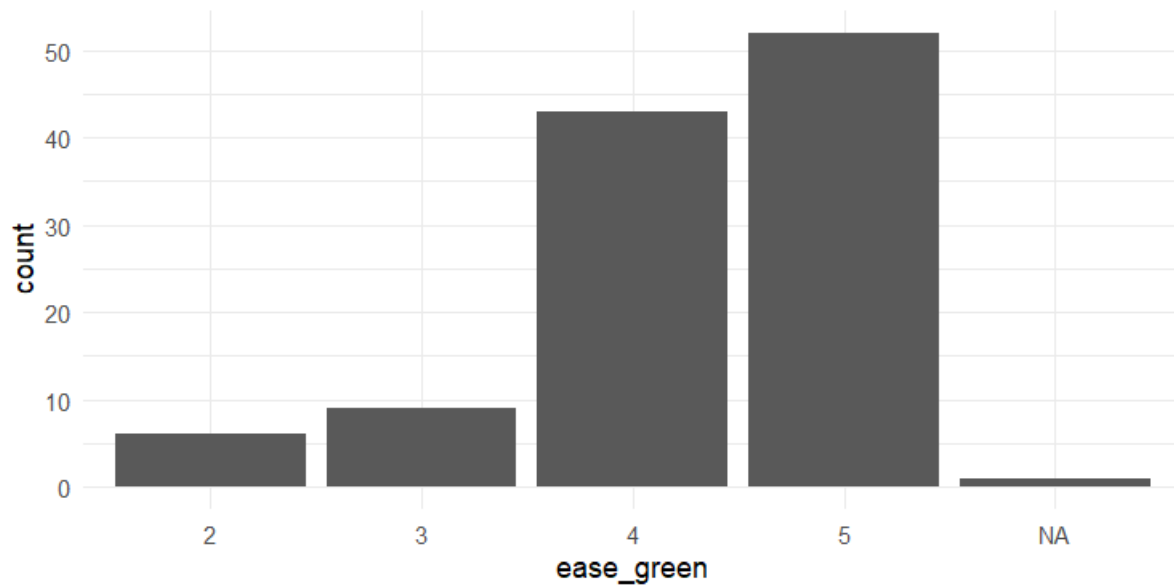

Figure S6. Overall ease of access to green space. 1 = very difficult, 5 = very easy.

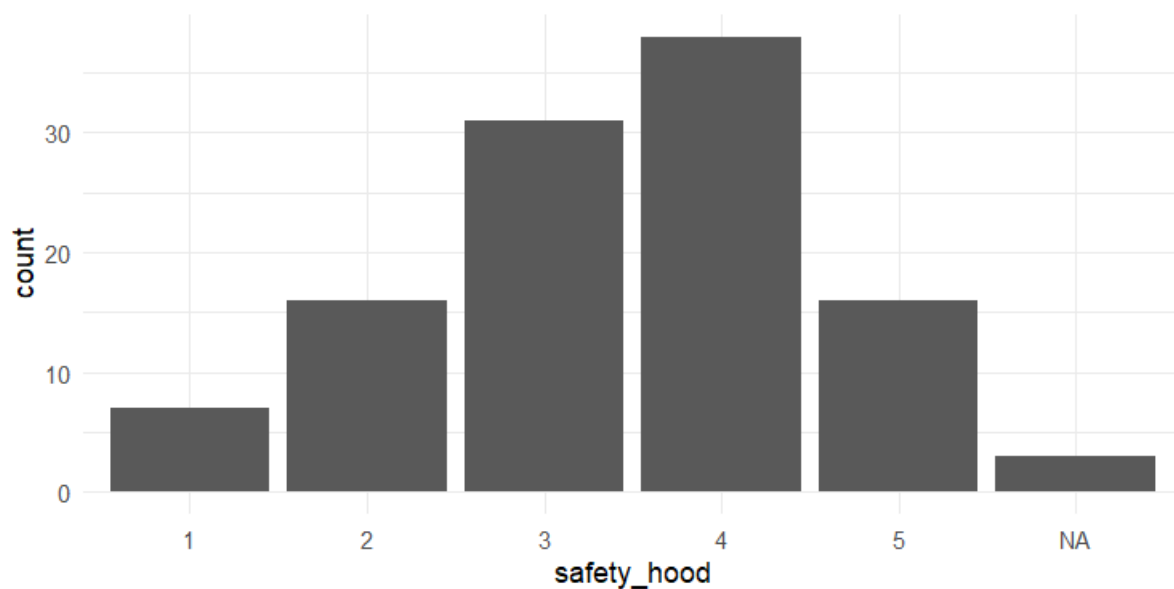

Figure S7. Overall feelings of safety walking alone after dark in neighbourhood. 1 = very unsafe, 5 = very safe.

Unadjusted Outcomes by Study Group

This section presents graphs comparing the outcome variable responses for each study group. Responses are largely similar across Central Park Apartments and Daniell Street with Whakahoa Village/Gowerton Place. The most marked difference is in feelings of safety walking alone after dark (Figure 22). However, these differences are substantially reduced once differences in gender composition of the sample from Central Park Apartments and Daniell Street with Whakahoa Village/Gowerton Place are accounted for (see Table 4 in the Results section of the related paper).

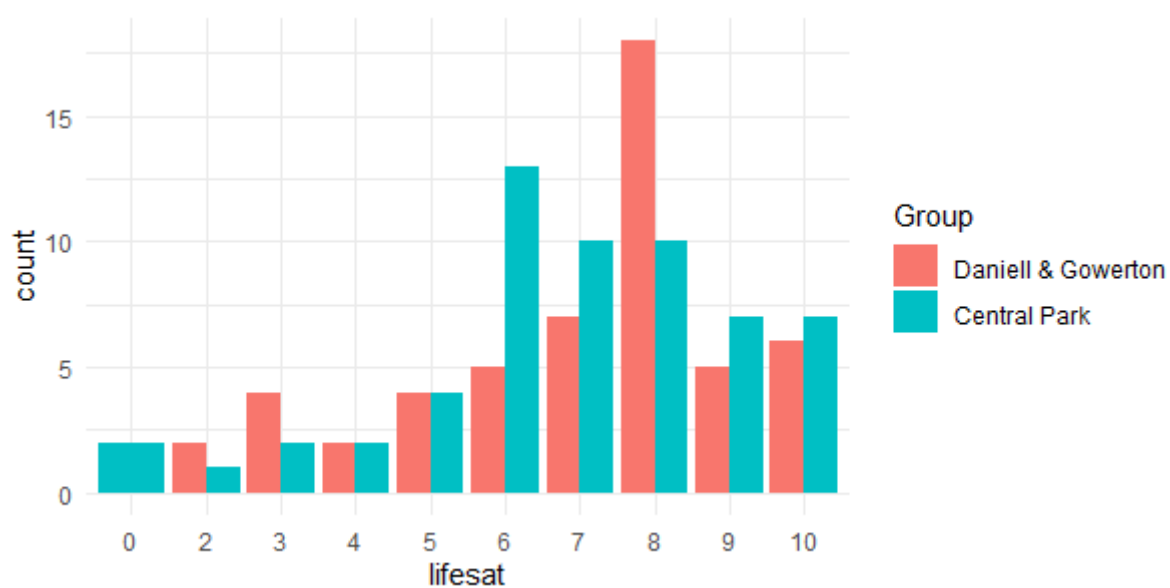

Figure S8. Life satisfaction scores by housing group. 0 = completely dissatisfied, 10 = completely satisfied.

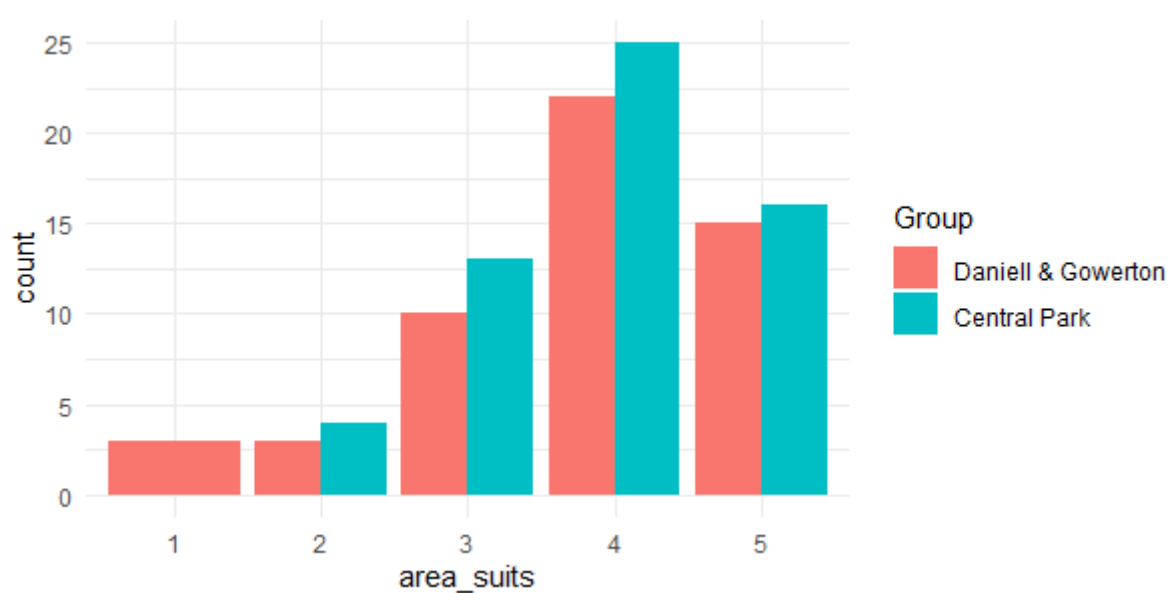

Figure S9. Area suits needs by housing group. 1 = strongly disagree, 5 = strongly agree.

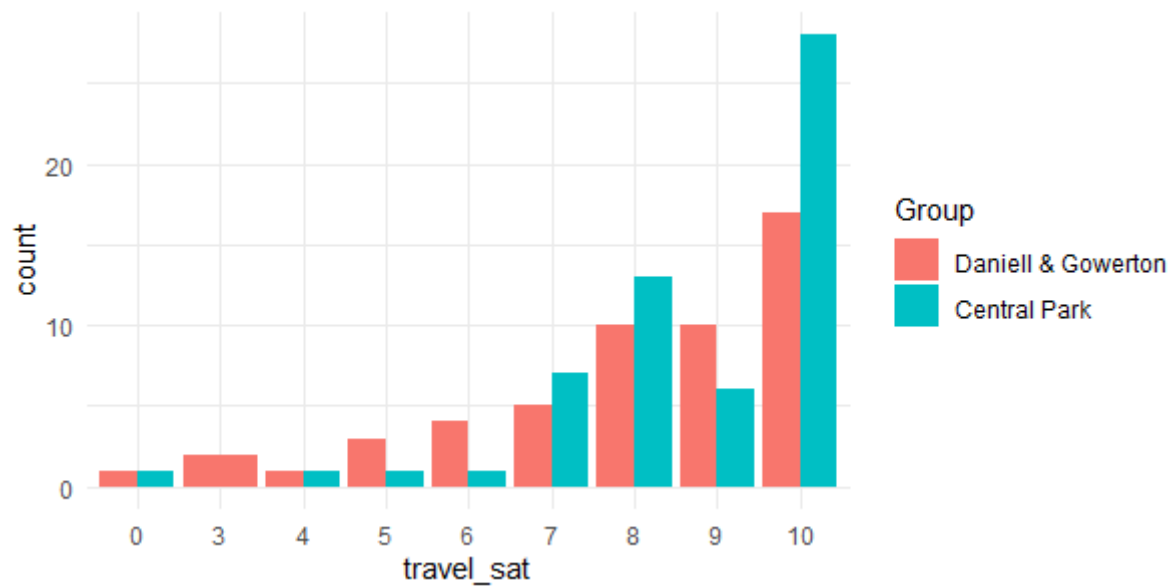

Figure S10. Satisfaction with area in terms of ability to travel, by housing group. 0 = completely dissatisfied, 10 = completely satisfied.

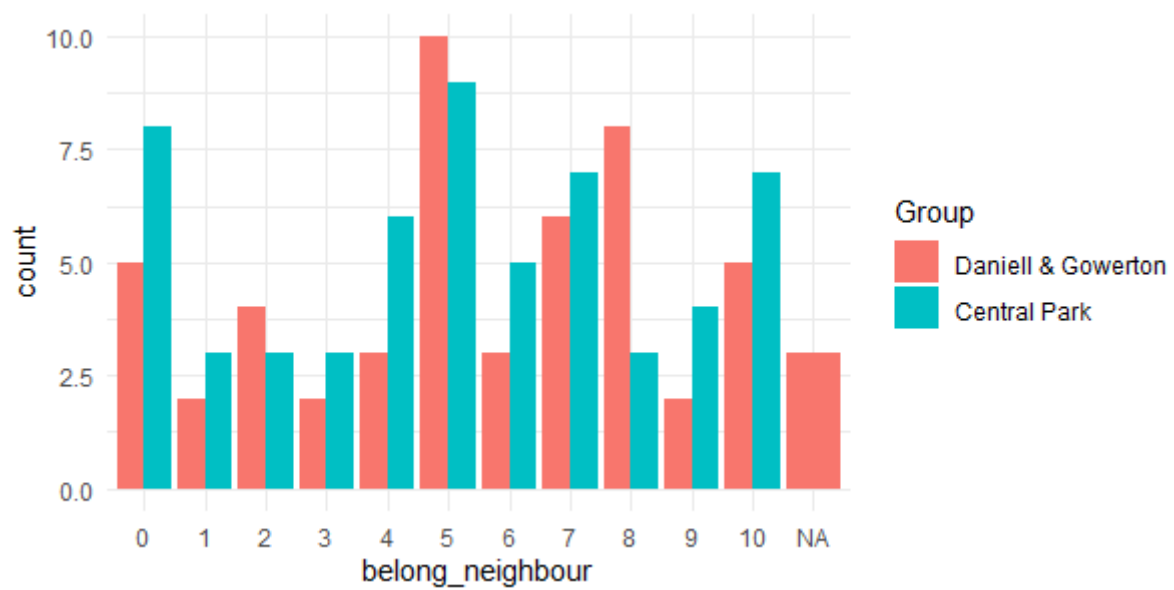

Figure S11. Sense of belonging to neighbourhood. 0 = no sense of belonging, 10 = very strong sense of belonging.

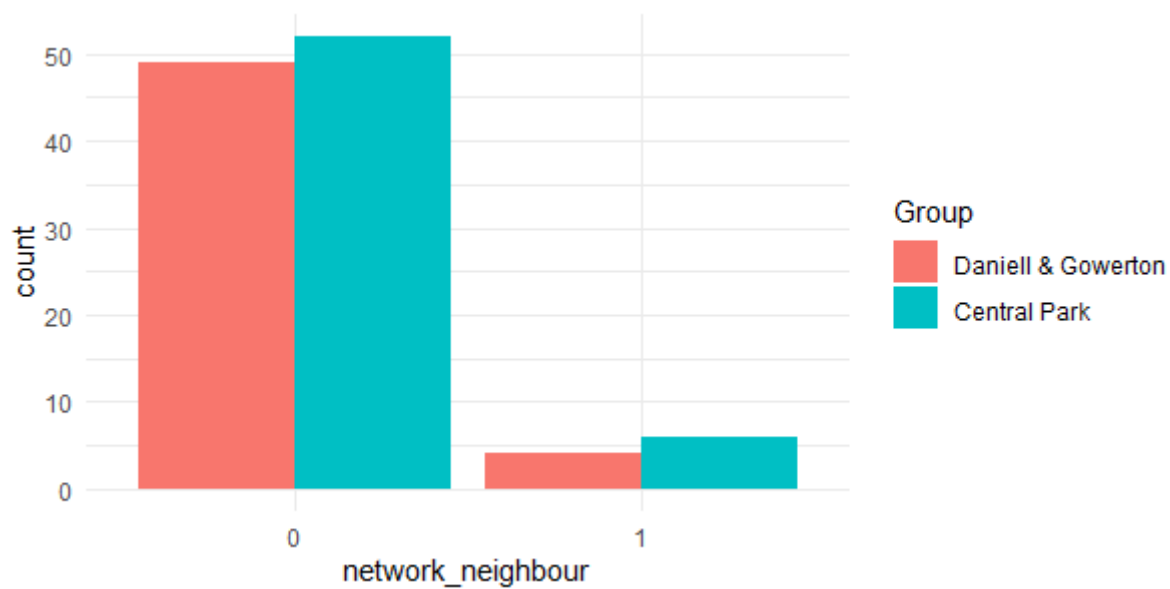

Figure S12. Belonging to neighbourhood group. 0 = no, 1 = yes.

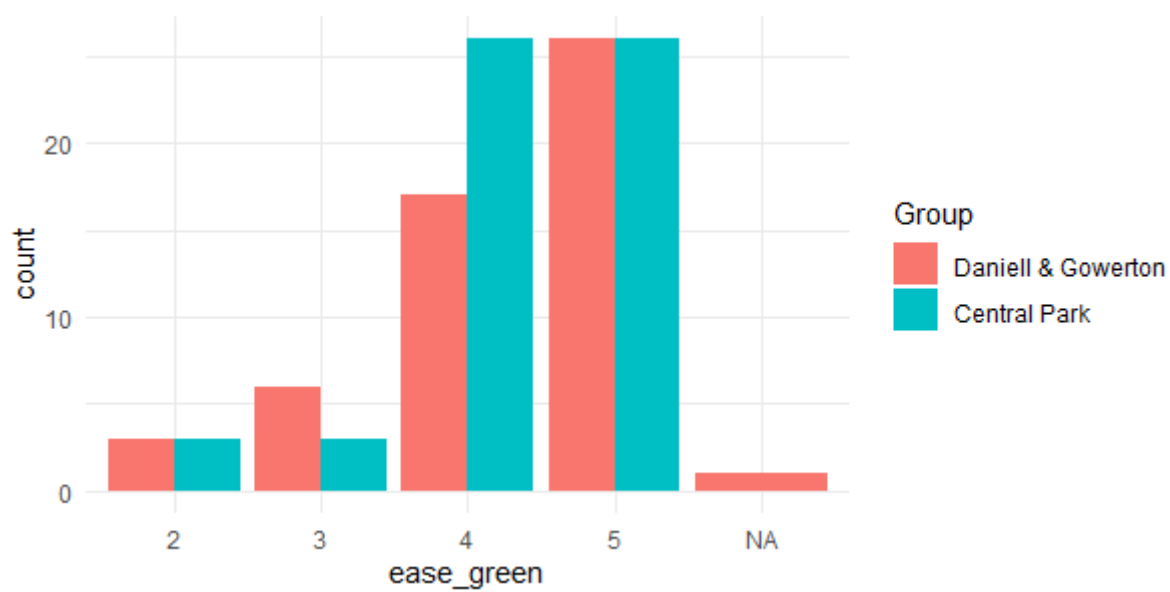

Figure S13. Ease of access to green space. 1 = very difficult, 5 = very easy.

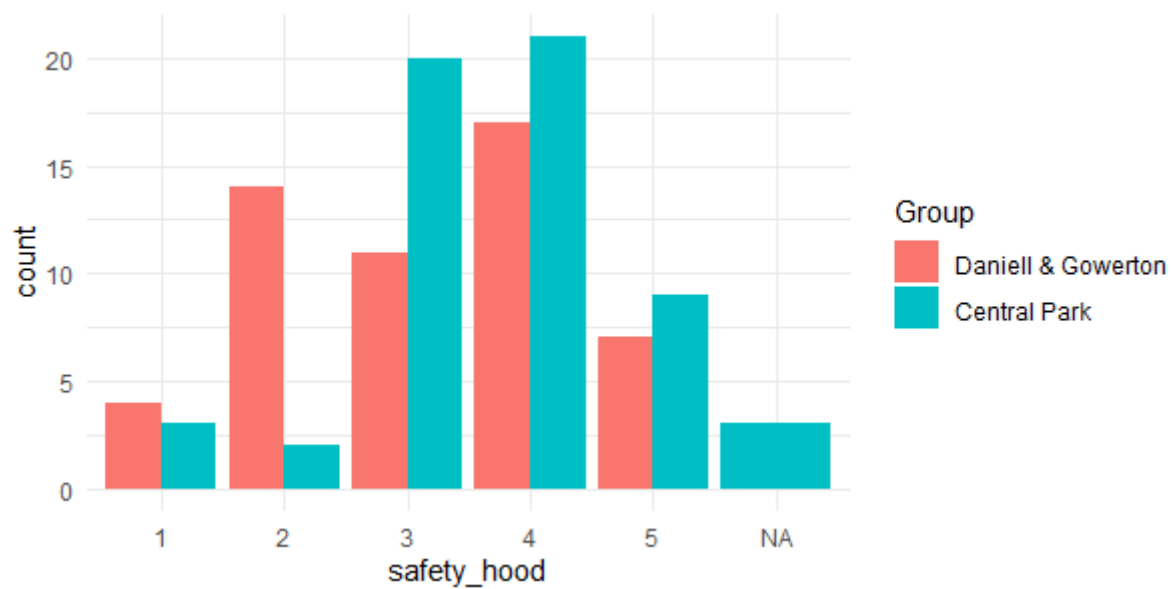

Figure S14. Feelings of safety walking alone after dark in neighbourhood. 1 = very unsafe, 5 = very safe.
