

Supplementary Materials

# A New Method for the Assessment of the Oxidative Potential of Both Water-Soluble and Insoluble PM

Maria Agostina Frezzini, Gianluca Di Iulio, Caterina Tiraboschi, Silvia Canepari and Lorenzo Massimi \*

**Figure S1.** Biplot of PC1/PC2 from the PCA performed on the WSOP, TOP and IOP values for OP<sup>AA</sup>, OP<sup>DTT</sup> and OP<sup>DCFH</sup>, and element concentrations in the water-soluble (\_ws) and insoluble (\_i) fraction of the 20 PM<sub>10</sub> samples.

**Table S1.** Scores and loadings of the five significant components obtained by performing the PCA on the matrix of the data (580 data points) composed of 20 PM<sub>10</sub> samples and 29 variables.

**Table S2.** Results of this study compared with other findings available in the literature.

<b>References</b>	<b>Performed OP assays</b>	<b>PM aerodynamic diameter</b>	<b>Main findings</b>
This study	OP <sup>DCFH</sup> OP <sup>AA</sup> OP <sup>DTT</sup>	PM <sub>10</sub>	Water-soluble PM is mainly responsible for the generation of the TOP. Insoluble PM from mineral dust contribute to the IOP <sup>DCFH</sup> and IOP <sup>DTT</sup>
Frezzini et al., 2022 [42]	OP <sup>DCFH</sup> OP <sup>AA</sup> OP <sup>DTT</sup>	PM <sub>10</sub>	The redox activity of the insoluble fraction of PM provided a significant contribution to the OP <sup>AA</sup>
Gao et al., 2020 [15]	OP <sup>DTT</sup>	PM <sub>2.5</sub>	Water-insoluble PM contributed $\approx$ 20% to the OP of particles
Wang et al., 2013 [43]	Macrophage ROS assay (DCFH)	Coarse PM <sub>2.5</sub> Ultrafine	Insoluble fraction played a key role in potential toxicity of PM
Verma et al., 2012 [45]	OP <sup>DTT</sup>	PM <sub>2.5</sub>	Hydrophobic fraction of insoluble organic aerosols contributed to the oxidative properties of ambient PM
Daher et al., 2011 [40]	OP <sup>DTT</sup> Dihydroxybenzoate (DHBA)	PM <sub>2.5</sub>	Insoluble PM species emerged as potentially redox active
