

Supplementary Figure S2

FGFR1c, FGFR3c and FGFR4 expression in #1-derived and #2-derived primary cultures of HFs.

Real time RT-PCR, performed in primary cultures of HFs from dermal portion of KIN I #1 and KIN I #2 samples using specific RNA primers, shows that all analyzed cells express comparable levels of FGFR1c, FGFR3c and FGFR4 mRNAs. Results are expressed as mean values \pm SD. The student's t test was performed, and significance levels are defined as $p < 0.05$. ns not significant.
