

1. SUPPLEMENTARY FIGURES

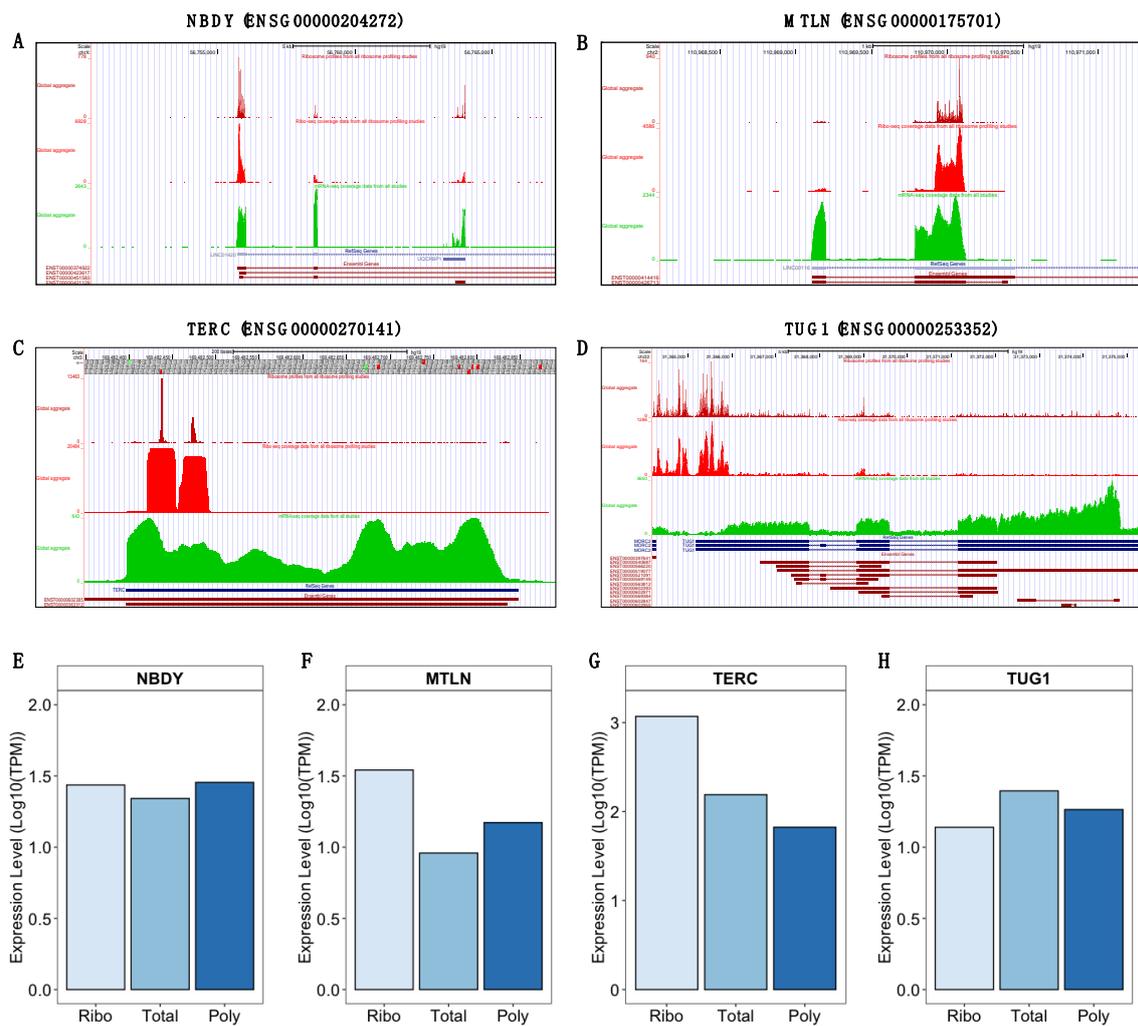

**Figure S1. Ribosome profiling characterization.** (A) Bioanalyzer analysis showed 30 nucleotides ribosome-protected RNA fragments in hASC replicates (samples from DONOR1, DONOR2 and DONOR3, respectively). Dashed lines represents 30 nucleotides fragment size. (B) Bioinformatics workflow to identify smORFs within lncRNAs. (C) Overview of Ribo-seq reads and passed unique reads using in the analysis. (D) Alignment reads distribution of Ribo-seq in hASC.

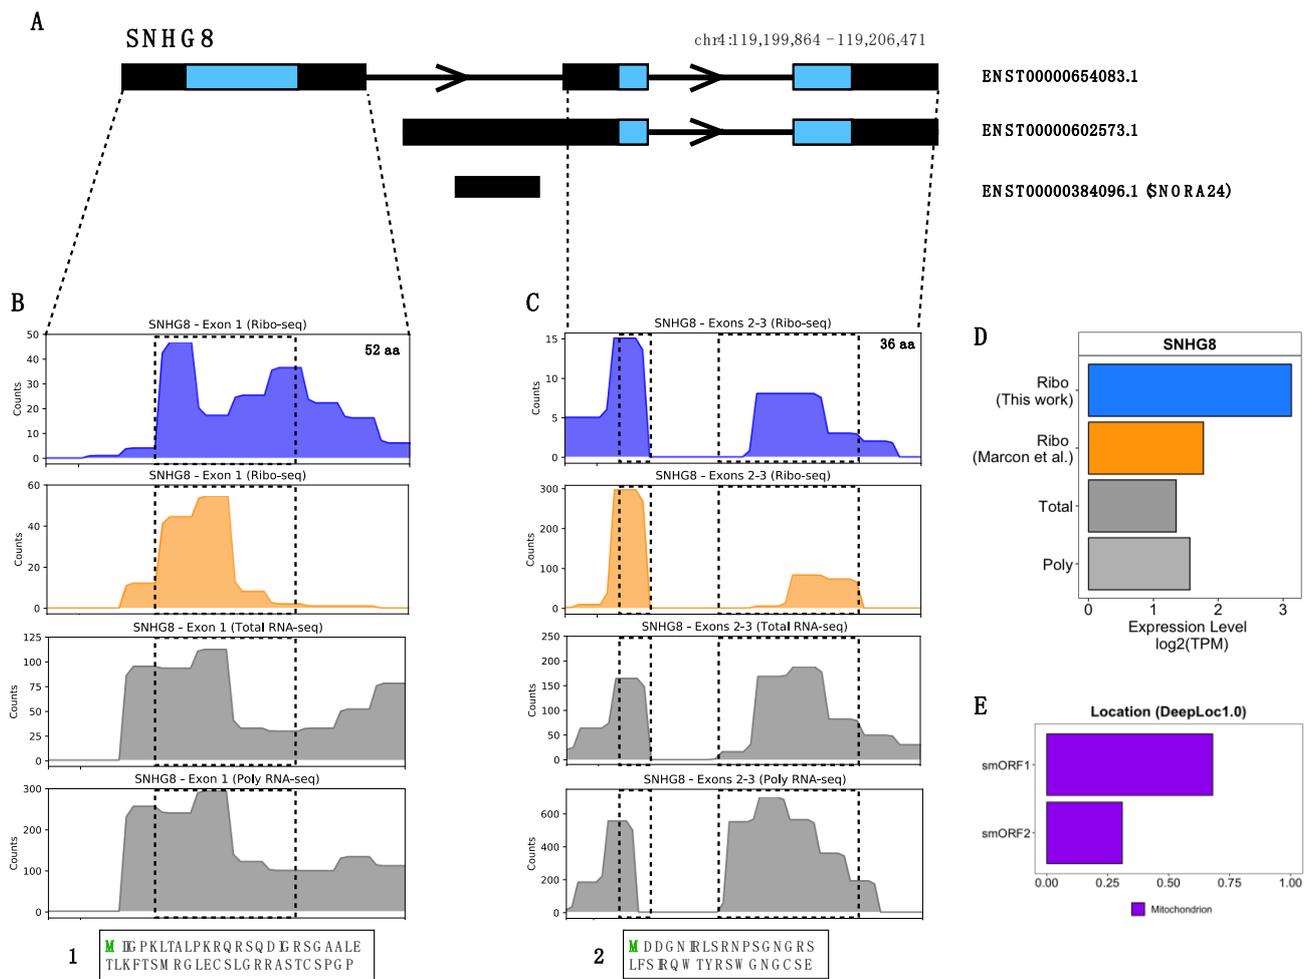

**Figure S2. Expression profile of protein-coding genes in sequenced hASC.** (A) Expression levels of Ribo-seq protein-coding genes and, the Gene Ontology analysis of the highest expressed genes. (B) Expression levels of Total RNA-seq protein-coding genes and, Gene Ontology of the highest expressed genes. (C) Expression levels of Poly RNA-seq protein-coding genes and, Gene Ontology of the highest expressed genes. On the right of vertical dashed line are represented the five hundred high-expressed genes.

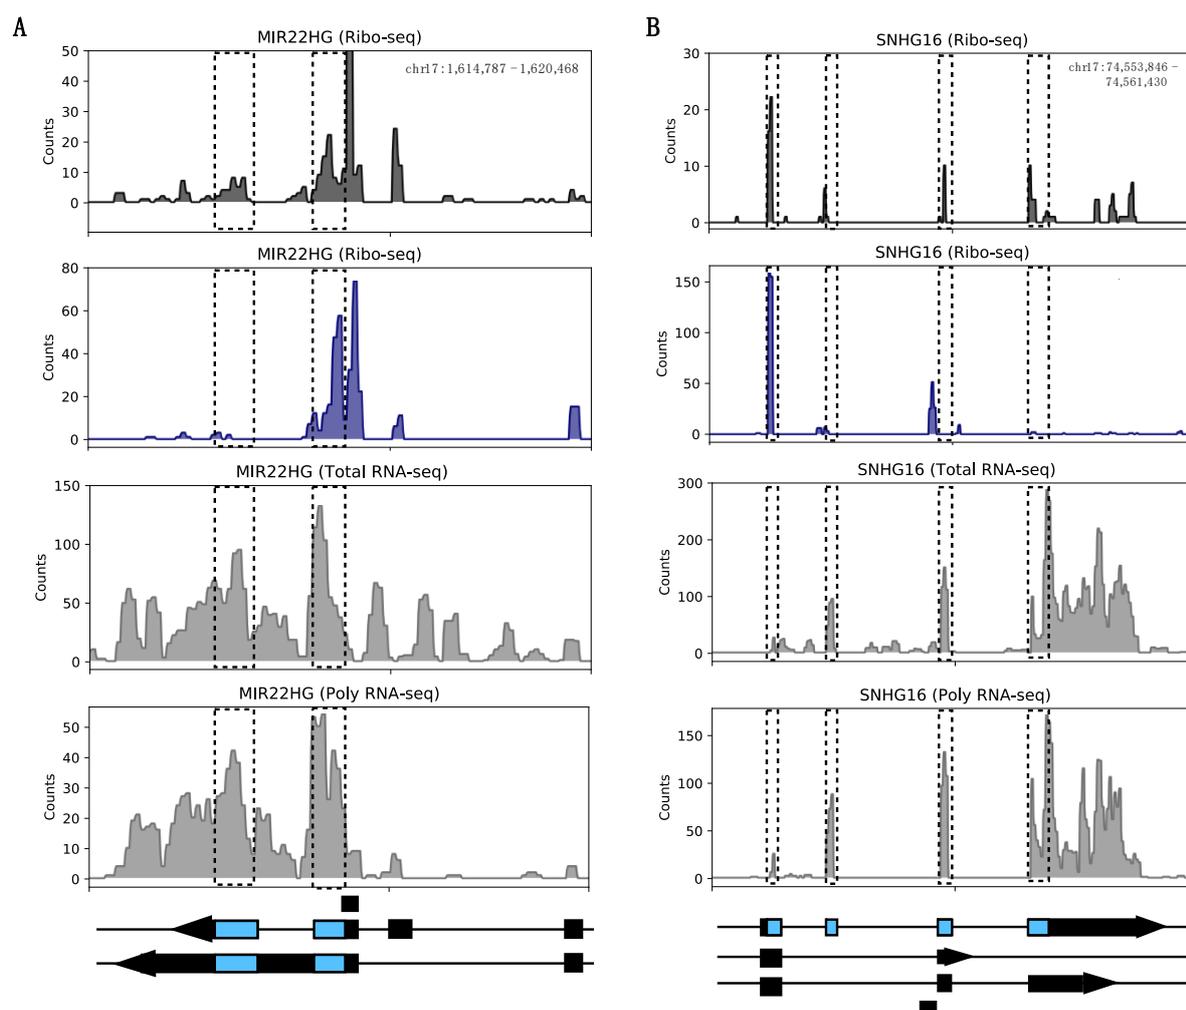

**Figure S3. Expression profile of lncRNAs in transcriptome, translome and ribosome-protected fragments.** (A–C) Histograms showing the expression level profile of lncRNAs in the Ribo-seq, Total RNA-seq and Poly RNA-seq, respectively. (D) Venn diagram showing the comparison of differential lncRNAs in the Ribo-seq, Total RNA-seq and Poly RNA-seq. (E) Expression levels of lncRNAs H19 (left panel), MALAT1 (middle panel) and NEAT1 (right panel). (F) Cover plots representing mapped profile of the H19, MALAT1 and NEAT1 lncRNAs, respectively. Upper panel represents Ribo-seq data, middle panel represents Total RNA-seq data and, lower panel represents Poly RNA-seq data. Y-axis represents raw reads count.

**Figure S4. smORF-derived microproteins.** GWIPS-viz expression profiles of Ribo-seq (A-site)\* coverage (Upper panel), Ribo-seq coverage (Middle panel) and RNA-seq coverage (Lower panel). Plots represent global aggregate from all samples of (A) NBDY, (B) MTLN, (C) TERC and (D) TUG1. Expression levels in different sequenced cell fractions of (E) NBDY, (F) MTLN, (G) TERC and (H) TUG1, respectively. \*Footprint reads align only to the A-site position (elongating ribosomes).

**Figure S5. Ribosome occupancy of lncRNA SNHG8.** (A) Examples of transcripts isoforms of SNHG8 and SNORA24. (B) Ribosome footprint of smORF in exon 1 of SNHG8. (C) Ribosome footprint of smORF in exon 2 of SNHG8. (D) Normalized expression levels (TPM) of SNHG8 in different Ribo-seq datasets and in Total and Polysomal RNA-seq. (E) Localization prediction of two microproteins showed. Light blue boxes indicate the smORF location in transcripts, and the dashed boxes represent the smORF location in the read coverage plot.

**Figure S6. Ribosome occupancy of lncRNAs MIR22HG and SNHG16.** First and second panel shows Ribosome occupancy (Ribo-seq from this study and from Marcon et al., respectively), third and last panel shows Total and Polysomal RNA-seq coverage in lncRNA (A) MIR22HG and (B) SNHG16. Light blue boxes indicate the smORF location in transcripts, and the dashed boxes represent the smORF location in the read coverage plot.

## 2. Supplementary Tables

**Table S1.** Ribo-seq identified 222 lncRNAs associated with ribosomes in human adipose-derived stem cells (hASC).
