GSE130376	Next-generation sequencing of cholinergic interneurons in the nucleus accumbens of cocaine-addicted and non-addicted mice	Nucleus accumbens (mouse)	<a href="https://www.ncbi.nlm.nih.gov/geo/query/acc.cgi?acc=GSE130376">https://www.ncbi.nlm.nih.gov/geo/query/acc.cgi?acc=GSE130376</a>

**Figure S1.** Full-length agarose gel: reverse transcription-polymerase chain reaction (RT-PCR) with mouse TAAR6 and GAPDH (housekeeping gene) specific primers using RNA isolated from the prefrontal cortex (lanes 1-6 for TAAR6, 7-12 for GAPDH) and olfactory bulb (lanes 15-20 for TAAR6, and 21-26 for GAPDH) of 6 male animals confirmed TAAR6 mRNA expression. Amplicons from olfactory epithelium cDNA (lane 13) and plasmid containing mouse Taar6 gene sequence (lane 14) were included as primer specificity controls. Negative control is K-, DNA ladder is M (Evrogen, #NL003). Red is a source of cropped image. Gel Doc XR+ Documentation System (Bio-Rad) was used for agarose EtBr-stained gel analysis. Time of imaging exposure was 0.936 sec.
