

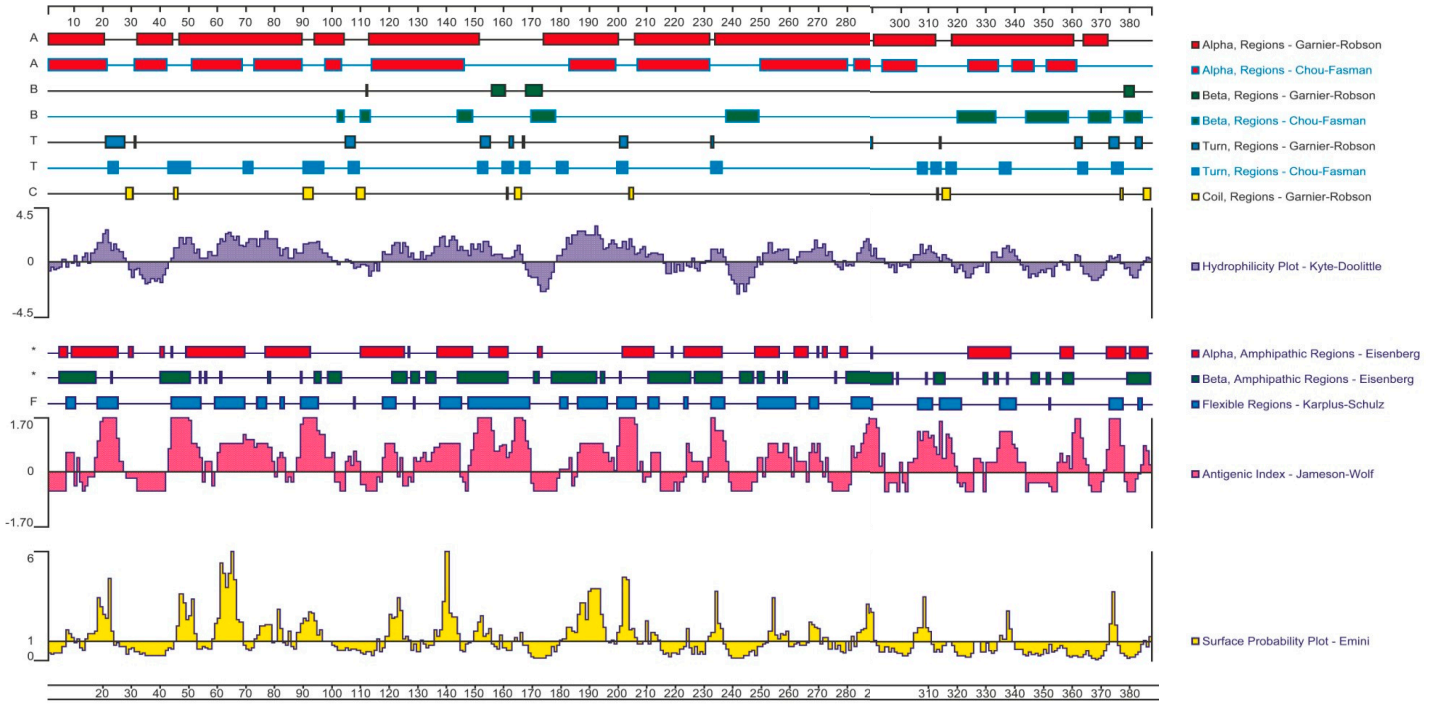

Figure S1. Characteristics of murine Serpinb3a sequence (Uniprot: Q8BG86).

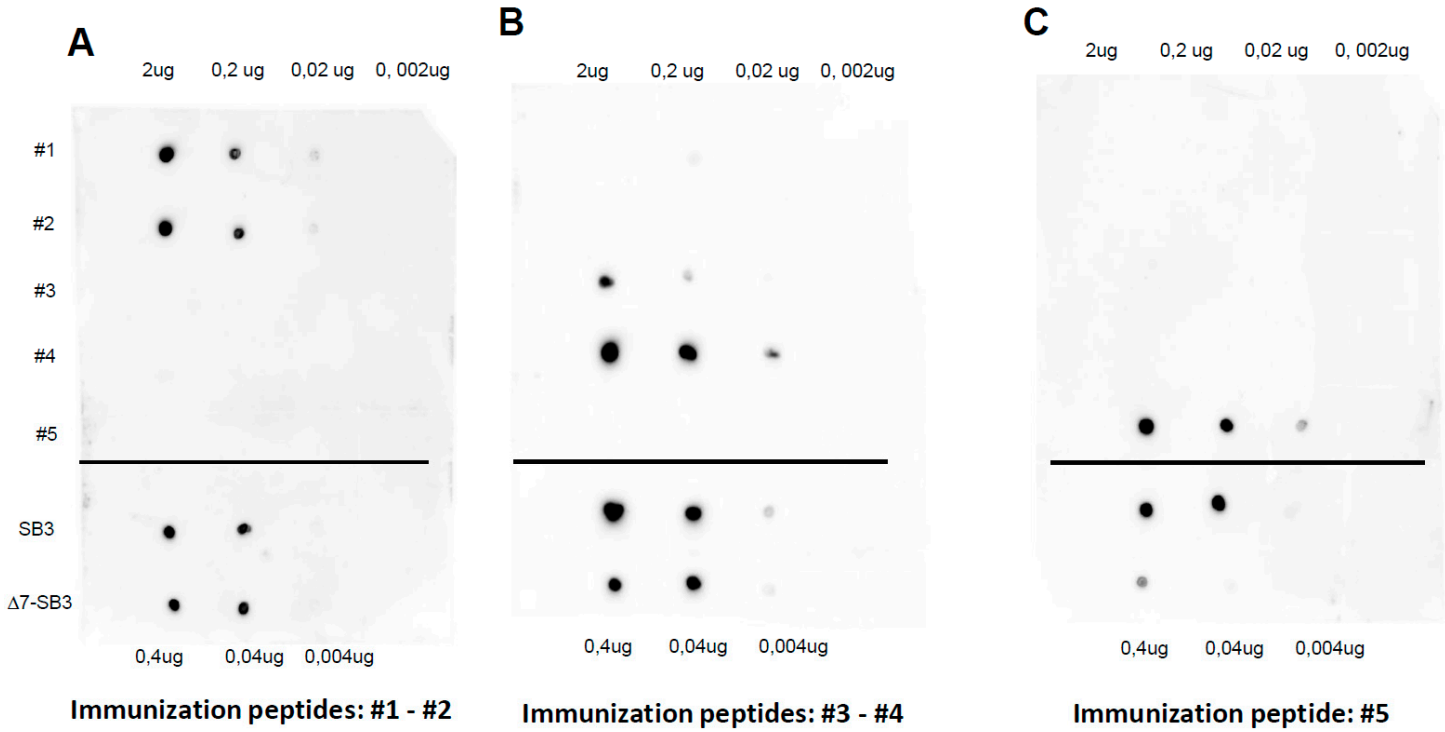

Figure S2. Dot blot results using different concentrations of peptides #1 – #5, recombinant SerpinB3(SB3) and SerpinB3 deleted in the reactive site loop (Δ7-SB3) in the solid phase. The three different blots were incubated with anti-P#1 and anti-P#2 (**A**), with anti-P#3 and anti-P#4 (**B**) or with anti-P#5 (**C**).
