

**Table S1.** List of chemicals and antibodies used for experimental work related to this manuscript.

Reagent	Commercial vendor, Cat#
Ethanol	Ajax Finechem, cat. no. AJA214
Optima water	Thermo Fisher Scientific, cat. no. FSBW6-4
Methanol	Merck Millipore, cat. no. 1.06018.4000
Acetonitrile	Thermo Fisher Scientific, cat. no. FSBA955-4
Formic acid	Sigma-Aldrich, cat. no. 14265-1ML
Acetic acid	Sigma-Aldrich, cat. no. 33209-1L-GL
Igepal CA-630	Sigma-Aldrich, cat. no. I8896
Tris	Astral Scientific, cat. no. BIO3094T
Antibodies	
Anti-rabbit NLRP1	Cell signaling, cat. no. 4990S, dilution = 1:2,000
Anti-rat GRP94	ThermoFisher Scientific, cat. no. MA3-016, dilution = 1:10,000
Anti-mouse proinsulin	Cell Signaling, cat. no. 8138S, dilution = 1:5000
Anti-mouse tubulin	Sigma, cat. no. T6074, dilution = 1:10,000
Anti-mouse I κ B- α	Thermo Fisher scientific, cat. no. 40903, dilution = 1:1,000
Recombinant Anti-IL-1 β	Abcam, cat. no. ab283818, dilution = 1:2,000
Anti-rat	Abcam, cat. no. ab6734, dilution = 1:10,000
Anti-rabbit	Cell signaling, cat. no. 7074S, dilution = 1:10,000
Anti-mouse	Cell signaling, cat. no. 7076S, dilution = 1:10,000

Table S2. List of peptides from heavy chain fraction digestion of INS-1E cells. The peptides map to RT1.A (class Ia) region of RT1 system in *Rattus norvegicus*.

Peptides obtained from tryptic digest of RT1.A heavy chain	Uniprot Accession for detected peptides	Protein description
YSDAENPR WASVVPLGK WEPSPSTDSNLLLLFLELWQFL GYEQHAYDGR DYIALNEDLK VEHEGLPEPLSQR TWAVADFAAWITR	P15978 HA11_RAT P15978 HA11_RAT:P16391 HA12_RAT P15978 HA11_RAT P15978 HA11_RAT P15978 HA11_RAT:P16391 HA12_RAT P15978 HA11_RAT P15978 HA11_RAT	Class I histocompatibility antigen Non-RT1.A alpha-1 chain OS= <i>Rattus norvegicus</i> OX=10116 GN=RT1-Aw2 PE=1 SV=1 RT1 class I histocompatibility antigen AA alpha chain OS= <i>Rattus norvegicus</i> OX=10116 PE=1 SV=2

Table S3. List of RT1.A-bound peptides from individual replicates of INS-1E cells under tested conditions.**Table S4.** List of peptides combined per condition for all groups.**Table S5.** List of source proteins for RT1.A bound peptides for all tested groups.**Table S6.** List of peptides with NNAlign predicted score and percentile rank for INS-1E cells under tested conditions.**Figure S1.** General genomic organization of RT1 system in rats. Localized on chromosome 20, the RT1 system has 4 main regions. The RT1.A is the class Ia region. The second region RT1.B/D includes class II genes. Class III contains non-MHC genes. Finally, the class Ib is represented by RT1.C/E/M.

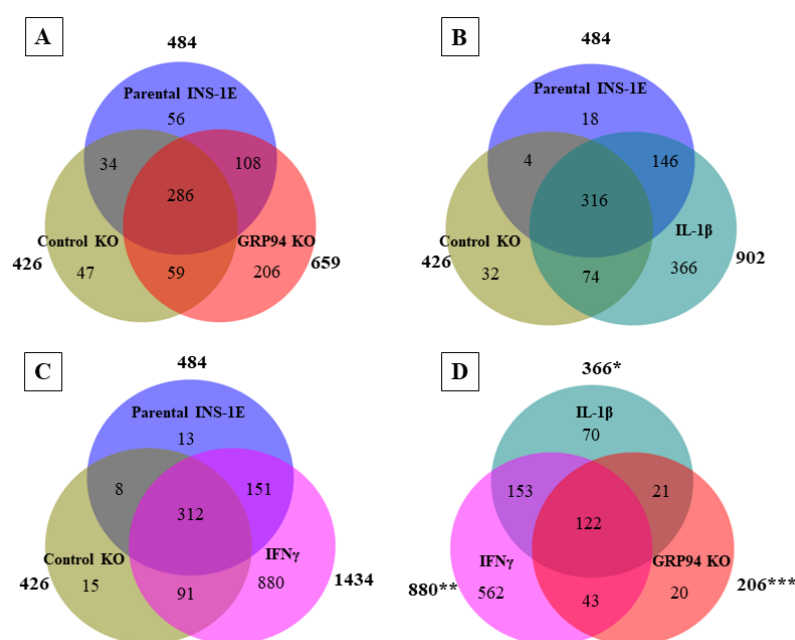

Figure S2. Venn diagrams showing number of source proteins for RT1.A. A eluted peptides distinct or overlapping between (A) Parental INS-1E, control KO & GRP94 KO and (B) Parental INS-1E, control KO & IL-1β exposure (15 pg/ml for 24 hours) (C) Parental INS-1E, control KO & IFNγ exposure (10 ng/ml for 24 hours) and (D) RT1.A contributing proteins exclusive for IL-1β, IFNγ exposed and GRP94 KO INS-1E groups. $n = 2$ for all except GRP94 KO where $n = 4$. * = IL-1β group proteins excluding parental INS-1E and control KO clone; ** = IFNγ group proteins excluding parental INS-1E and control KO clone; *** = GRP94 KO group proteins excluding parental INS-1E and control KO clone.

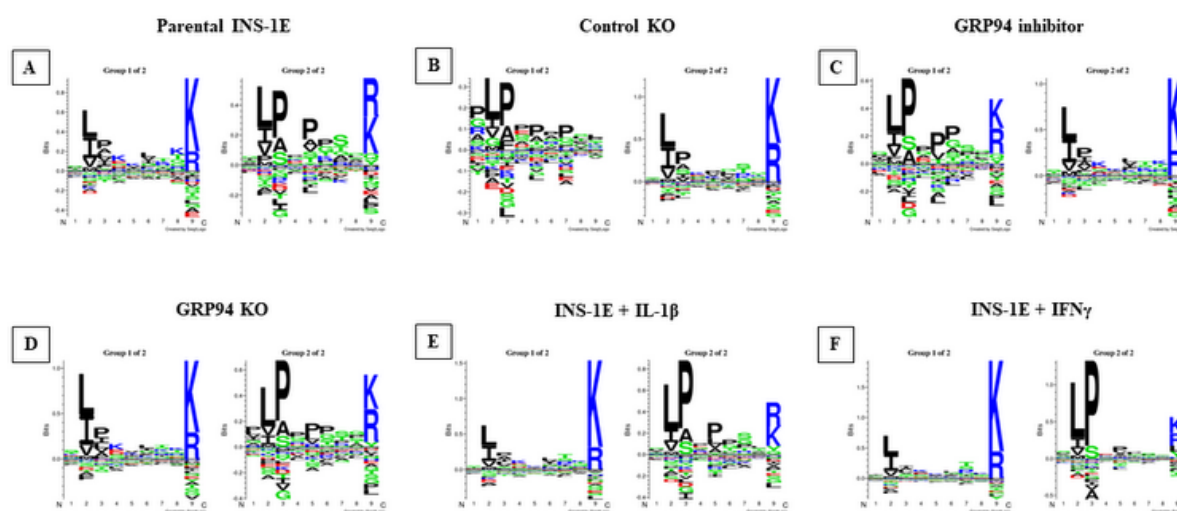

Figure S3. Gibbscluster analysis for RT1.A-bound peptides in INS-1E cells under tested conditions. (A) parental INS-1E (B) control GRP94 KO clone (C) INS-1E treated with GRP94 inhibitor (20 μM for 24 hours) (D) GRP94 KO INS-1E clone (E) IL-1β exposure (15 pg/ml for 24 hours) and (F) IFNγ exposure (10 ng/ml for 24 hours). $n = 2$ for all except GRP94 KO where $n = 4$.

Figure S4. NNAlign binding motif for trained model against INS-1E peptides. The model was trained against RT1.A-bound and random natural peptides.
