Values represent hazard ratios (95% confidence intervals). In the case of statistical significance (p<0.05), the values are expressed in bold. CV – cardiovascular; TIA – transient ischemic attack; MI – myocardial infarction; COPD – chronic obstructive pulmonary disease; ACEI – angiotensin-converting enzyme inhibitor; ARB – angiotensin receptor blocker. ^a The time period covered by “history” – 5 years before the index date of this study. ^b New user of ACEIs/ARBs – patient in whom ACEI/ARB treatment was initiated in association with the diagnosis of peripheral arterial disease. ^c Co-payment – calculated as the cost of ACEI/ARB treatment paid by the patient per month. ^d Lipid lowering agents other than statins – ezetimibe and fibrates.
