Data are presented as median and minimum to maximum. Differences between AHF patients who were alive and those who deceased within 1 year after hospitalization for AHF were tested with the Mann-Whitney U test.

P-values of < 0.05 are considered significant and are depicted in bold.

apoA-I, apolipoprotein A-I; apoA-II, apolipoprotein A-II; C, cholesterol; HDL-p, high-density lipoprotein particle concentration; L, large; p, particle; S, small.
