

Supplemental Figures

Figure S1. Schematic representation of the most abundant *T. gondii* peptide 6027-binding proteins. Three main clusters are identified that account for 47% relative abundance, assigned to mitochondrion, ER and GRA proteins.

Figure S2. Schematic representation of the most abundant peptide 6027-binding proteins in murine spleen cell extracts. Three main clusters are identified that account for 29% relative abundance, and are assigned to mitochondrion, ER and GRA proteins.
