Data indicate the number of RAT-positive samples / rRT-PCR-positive samples. HCoV, human coronavirus; RSV, respiratory syncytial virus; PIV, parainfluenza virus.

Supplementary Figure S1. SARS-CoV-2-positivity rate according to the RAT kits (based on the Ct values). Dot plots showing the positive and negative samples detected using the (A) Panbio™, (B) Standard™, (C) Humasis, and (D) Acrosis kits. The colored circles represent the RAT results of individual samples. The dotted lines represent the cut-off values for each RAT kit.
