Table S1. Characteristics of ZZ AATD-COPD patients

COPD, chronic obstructive pulmonary disease; FEV1, forced expiratory volume in 1 second; FVC, forced vital capacity; mMRC, modified Medical Research Council dyspnoea scale.

	COPD (n=124)		No COPD (n=76)	
	Median	IQR	Median	IQR
CC16 (ng/ml)	23.97	18	27.41	17.36
CCL18 (ng/ml)	172.55	107.17	124.32	80.48
SP-D (ng/ml)	8.05	7.92	6.86	5.43
CRP (mg/l)	2.54	5.22	1.07	4.48
IL-6 (pg/ml)	0.53	0.53	0.52	0.45
IL-8 (pg/ml)	0.43	2.31	0.74	2.64
TNF-alpha (pg/ml)	0.93	1.8	0.93	2.54

Table S2. Raw biomarker values for AATD patients, with and without COPD.
CC16, club cell protein 16; CCL18, chemokine ligand 18; SP-D, surfactant protein D;
CRP, C-reactive protein; IL-6, interleukin-6; IL-8, interleukin-8; TNF-alpha, tumour
necrosis factor alpha.

**Table S3. Multivariable model to predict absolute FEV1 or TL$_{CO}$ at baseline in
patients with ZZ AATD-COPD (without biomarkers)**
FEV1 or TL$_{CO}$ absolute values were modelled using the equation: FEV1 or TL$_{CO}$ ~ Age
+ Sex + Smoking. The beta coefficients (Beta1 and Beta2), standard error (SE1 and
SE2), p-values (P1 and P2), adjusted R^2 (R^2) and number included in each model (n)
are presented in the table.

	FEV1 (n=110) R²=0.20		TLCO (n=98) R²=0.07	
	Beta1 (SE1)	P1	Beta2 (SE2)	P2
Age	0.278 (0.198)	0.164	-0.587 (0.210)	0.006

Table S4. Multivariable model to predict FEV1 or TL$_{CO}$ percentage predicted at baseline in patients with ZZ AATD-COPD

FEV1 or TL$_{CO}$ percentage predicted values were modelled using the equation:

FEV1 or TL$_{CO}$ ~ Age + Sex + Smoking + Biomarkers (CC16 + CCL18 + CRP + IL6 + IL6 + TNF-alpha + SP-D). The beta coefficients (Beta1 and Beta2), standard error (SE1 and SE2), p-values (P1 and P2), adjusted R^2 (R^2) and number included in each model (n) are presented in the table.

	FEV1 (n=110) R^2=0.20		TLCO (n=98) R^2=0.04	
	Beta1 (SE1)	**P1**	**Beta2 (SE2)**	**P2**
Age	0.315 (0.173)	0.072	-0.503 (0.191)	0.010
Male	-7.226 (3.678)	0.052	-2.770 (4.083)	0.499
Ex-smoker	-17.050 (4.586)	<0.001	-0.428 (5.035)	0.932
Current smoker	-19.552 (14.078)	0.168	-4.319 (14.830)	0.772

Table S5. Multivariable model to predict FEV1 or TL$_{CO}$ percentage predicted at baseline in patients with ZZ AATD-COPD (without biomarkers)

FEV1 or TL$_{CO}$ percentage predicted values were modelled using the equation:

FEV1 or TL$_{CO}$ ~ Age + Sex + Smoking. The beta coefficients (Beta1 and Beta2), standard error (SE1 and SE2), p-values (P1 and P2), adjusted R^2 (R^2) and number included in each model (n) are presented in the table.

	FEV1 (n=94) R^2=0.15		TLCO (n=84) R^2=0.08	
	Beta1 (SE1)	P1	Beta2 (SE2)	P2
Age	3.167 (0.707)	<0.001	0.007 (0.002)	0.004
Male	-4.638 (13.858)	0.739	-0.079 (0.045)	0.082
Ex-smoker	43.879 (18.178)	0.018	0.051 (0.058)	0.382
Current smoker	18.699 (67.935)	0.784	-0.005 (0.210)	0.981

Table S6. Multivariable model to predict FEV1 and TL$_{CO}$ absolute change in patients with ZZ AATD-COPD (without biomarkers)

FEV1 (mLs/year) or TL$_{CO}$ (mmol/min/kPa/year) absolute change values were modelled using the equation:

FEV1 or TL$_{CO}$ ~ Age + Sex + Smoking. The beta coefficients (Beta1 and Beta2), standard error (SE1 and SE2), p-values (P1 and P2), adjusted R^2 (R^2) and number included in each model (n) are presented in the table.

	FEV1 (n=94) $R^2=0.14$		TLCO (n=84) $R^2=0.13$	
	Beta1 (SE1)	P1	Beta2 (SE2)	P2
Age	0.108 (0.024)	<0.001	0.085 (0.033)	0.011
Male	0.541 (0.466)	0.249	-0.007 (0.641)	0.991
Ex-smoker	1.205 (0.567)	0.036	0.186 (0.748)	0.804
Current smoker	0.343 (2.151)	0.874	-0.477 (2.778)	0.864
CC16	-0.021 (0.017)	0.227	-0.053 (0.023)	0.023
CCL18	0.001 (0.003)	0.565	-0.005 (0.004)	0.236
CRP	-0.017 (0.066)	0.797	-0.086 (0.088)	0.332
IL6	0.040 (0.203)	0.843	-0.059 (0.266)	0.826
IL8	-0.120 (0.075)	0.114	0.123 (0.099)	0.219
TNF-alpha	0.356 (0.228)	0.123	-0.013 (0.304)	0.966
SP-D	<0.001 (<0.001)	0.552	<0.001 (<0.001)	0.442

Table S7. Multivariable model to predict FEV1 and TL$_{CO}$ percentage predicted change in patients with ZZ AATD-COPD

FEV1 or TL$_{CO}$ percentage predicted change values were modelled using the equation: FEV1 or TL$_{CO}$ ~ Age + Sex + Smoking + Biomarkers (CC16 + CCL18 + CRP + IL6 + IL6 + TNF-alpha + SP-D). The beta coefficients (Beta1 and Beta2), standard error (SE1 and SE2), p-values (P1 and P2), adjusted R^2 (R^2) and number included in each model (n) are presented in the table.

	FEV1 (n=94) R^2=0.14		TLCO (n=84) R^2=0.02	
	Beta1 (SE1)	P1	Beta2 (SE2)	P2
Age	0.090 (0.021)	<0.001	0.068 (0.031)	0.029
Male	0.270 (0.411)	0.513	-0.482 (0.591)	0.417
Ex-smoker	1.115 (0.540)	0.042	0.457 (0.761)	0.550
Current smoker	0.200 (2.017)	0.921	-0.412 (2.753)	0.881

Table S8. Multivariable model to predict FEV1 and TL$_{CO}$ percentage predicted change in patients with ZZ AATD-COPD (without biomarkers)

FEV1 or TL$_{CO}$ percentage predicted change values were modelled using the equation: FEV1 or TL$_{CO}$ ~ Age + Sex + Smoking. The beta coefficients (Beta1 and Beta2), standard error (SE1 and SE2), p-values (P1 and P2), adjusted R^2 (R^2) and number included in each model (n) are presented in the table.
Figures
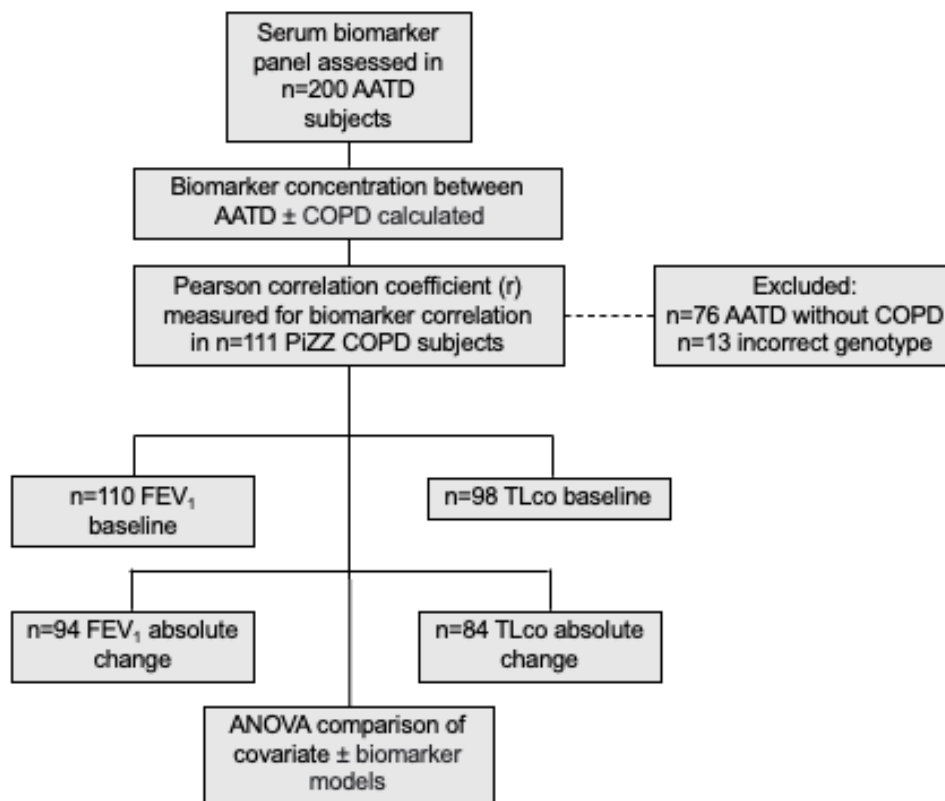

Figure S1: Study flow chart of biomarker measurement and subsequent statistical analyses.

The concentrations of a biomarker panel were measured in n=200 subjects with alpha-1 antitrypsin deficiency. Mann-Whitney U test was performed to calculate significance between the concentrations of biomarkers between AATD subjects with and without COPD. Pearson correlation coefficient (r) was measured only for AATD subjects with COPD and the PiZZ genotype (a total of n=111), of which n=110 subjects had a baseline FEV1 available and n=98 baseline TLco. R was also measured for biomarker correlation with FEV1 absolute change in n=94 subjects and TLco absolute change in n=84 subjects. The difference in model (covariates alone or covariates plus biomarker panel) was assessed using analysis of variance (ANOVA). AATD – alpha-1 antitrypsin deficiency; COPD – chronic obstructive pulmonary disease; FEV1 – forced expiratory volume in 1 second; TLco – transfer capacity of the lung for carbon monoxide.

Figure S2. Biomarker correlation plot

Biomarker correlation calculated using Pearson correlation coefficient with the coloured scale showing -1 (perfect negative relationship) to 1 (perfect positive relationship)
Figure S3. Histogram of number of FEV1 tests per individual

Histogram of the number of FEV1 tests available per individual for ZZ AATD-COPD patients.
Figure S4. Histogram of number of TLCO tests per individual

Histogram of the number of TLCO tests available per individual for ZZ AATD-COPD patients.

Figure S5. Histogram of FEV1 absolute change.

Histogram of the absolute change in FEV1 (mLs / year) for ZZ AATD-COPD patients.

Figure S6. Histogram of TLCO absolute change.

Histogram of the absolute change in TLCO (mmol/min/kPa/year) for ZZ AATD-COPD patients.
