**Supplementary Figure S2.** MD simulation resulted B-factors for top5, middle 4, and bottom 3 peptide candidates and EK1. Residues 1-30 are from the peptides and 31-259 are from the HR1 domain.

**Supplementary Figure S3.** RMSD result of the MD simulation.

**Supplementary Figure S4.** Example Ramachandran plot of the 132B peptide, indicating these residues are all in the helical form.
