**Figure S1.** The SEM image shows a monolayer of the PS spheres with glancing angle deposition of silica conducted at 75° and rotation. The scale bar is 400 nm.

**Figure S2.** High-resolution C 1s spectra with peak fitting of the non-carboxylated PS sphere monolayers on gold electrodes exposed to UV ozone for A) 0 min, B) 1 min, and C) 5 min. Component C5 assigned to O-C=O groups is highlighted in red.

**Figure S3.** Survey spectra of non-carboxylated PS spheres monolayers on gold electrodes exposed to UV ozone for A) 0 min, B) 1 min, and C) 5 min.

**Table S1.** Elemental quantification derived from survey spectra (atomic % and atomic ratios O/C) and the amount of carbon associated with O-C=O from high-resolution C 1s spectra (atomic %, fit component C5) for the non-carboxylated PS spheres monolayers on gold electrodes from Figure S2 and S3, respectively. Results are an average of three analysis locations on a single sample.

Sample ID	C	O	O/C	C5 (O-C=O)
No UV ozone	89.1	6.1	0.07	0.5
1 min	64.1	28.2	0.44	6.3
5 min	66.0	27.5	0.42	6.9

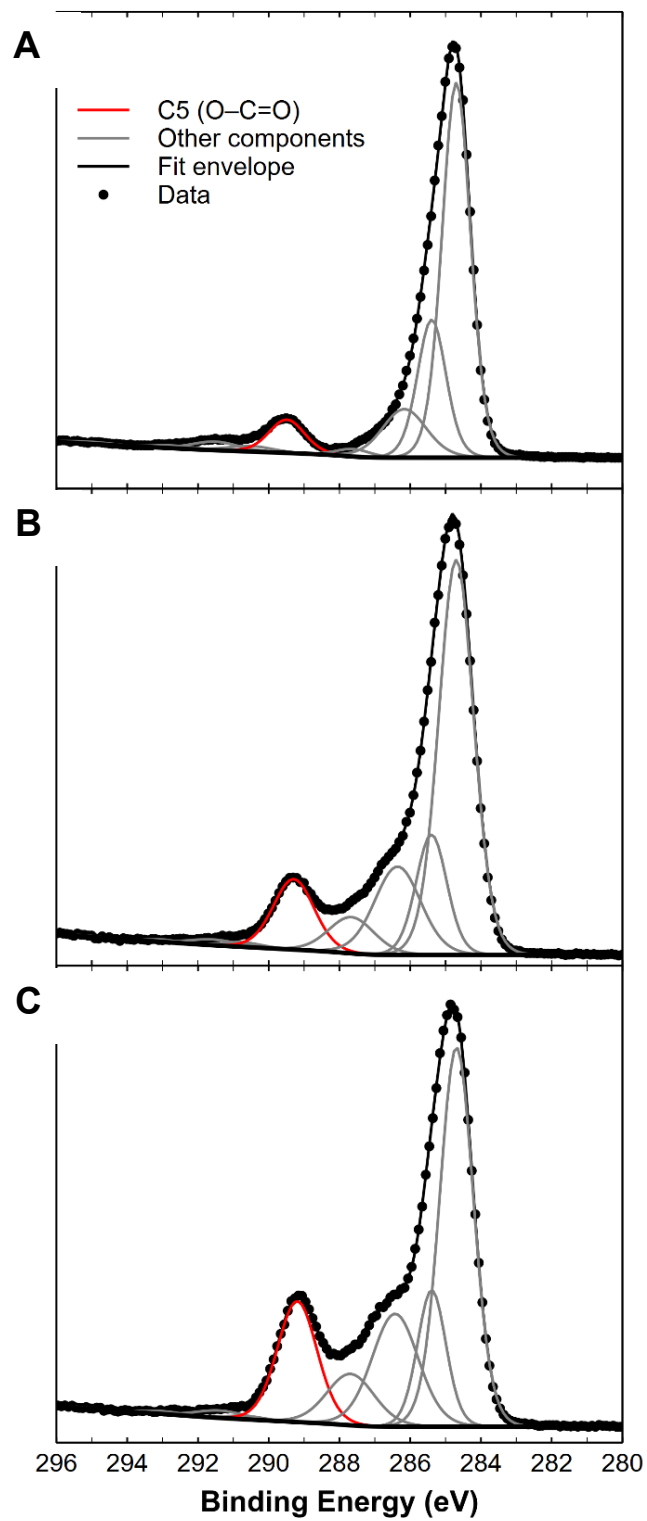

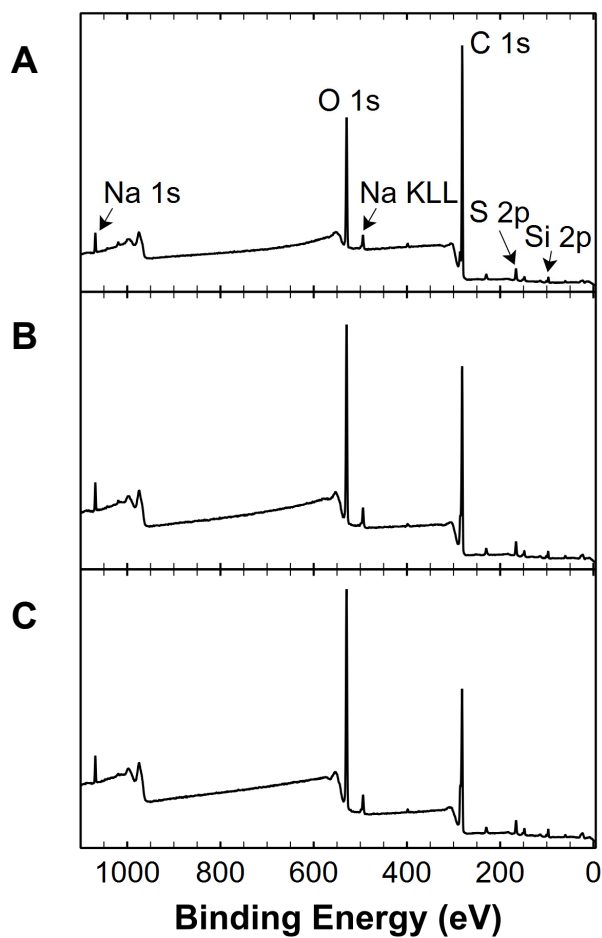

Figure S4. High-resolution C 1s spectra with peak fitting of the carboxylated PS sphere monolayers on gold electrodes exposed to UV ozone for A) 0 min, B) 1 min, and C) 5 min. Component C5 assigned to O-C=O groups is highlighted in red.

**Figure S5.** Survey spectra of carboxylated PS spheres monolayers on gold electrodes exposed to UV ozone for A) 0 min, B) 1 min, and C) 5 min.

**Table S2.** Elemental quantification derived from survey spectra (atomic % and atomic ratios O/C), and the amount of carbon associated with O-C=O from high-resolution C 1s spectra (atomic %, fit component C5) for the carboxylated PS spheres monolayers on gold electrodes from Figure S4 and S5, respectively. Results are an average of three analysis locations on a single sample.

Sample ID	C	O	O/C	C5 (O-C=O)
No UV ozone	76.1	18.6	0.24	4.7
1 min	68.1	25.8	0.38	7.4
5 min	62.6	30.9	0.49	10.0

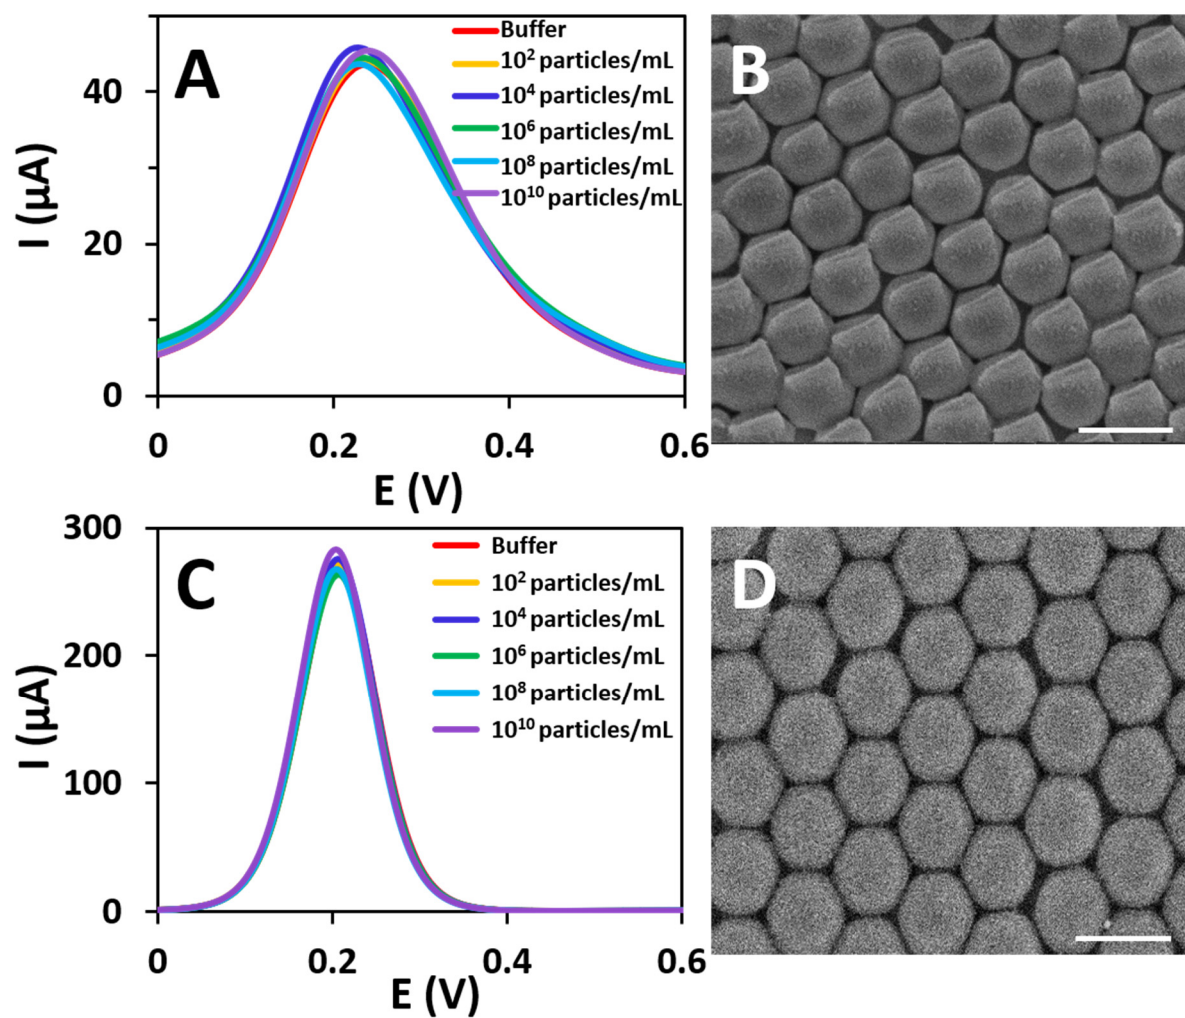

**Figure S6.** The SEM images of the monolayer of carboxylated PS spheres after being treated with UV-ozone for 1 min A), and 5 min B). The scale bar is 500 nm.

**Figure S7.** Survey spectra of carboxylated PS spheres monolayers on gold electrodes after A) no UV-ozone treatment, B) 1 min and C) 2 min UV-ozone treatment, all followed by EDC/NHS activation and streptavidin incubation.

**Table S3.** Elemental quantification derived from survey spectra (atomic and atomic ratios O/C), and the amount of carbon associated with O-C=O from high-resolution C 1s spectra (atomic %, fit component C5) for the COOH functionalised for the EDC/NHS activated PS spheres monolayers on gold electrodes from Fig S7. Results are an average of three analysis locations on a single sample.

Sample ID	C	O	N	O/C	N/C	C4 (C=O, O-C-O, N-C=O)
<b>No UV ozone treatment:</b>						
+ EDC/NHS	96.1	3.2	0.5	0.03	0.005	0.3
+ streptavidin	85.7	9.8	0.1	0.12	0.001	1.0
+ EDC/NHS + streptavidin	87.2	9.4	0.6	0.11	0.01	1.0
<b>1 min UV ozone treatment:</b>						
+ EDC/NHS	76.3	15.2	1.3	0.2	0.02	7.7
+ streptavidin	81.6	13.7	0.1	0.17	0.001	6.2
+ EDC/NHS + streptavidin	77.7	16.7	1.2	0.22	0.02	6.2

**Figure S8.** Differential pulse voltammograms obtained using a gold surface modified with a monolayer of streptavidin-modified polystyrene beads with A) and without C) silica deposited on top when incubating PEG-coated gold nanoparticles. The SEM images of the electrode with B) and without D) silica deposited on top after PEG-coated gold nanoparticles incubation. All scale bars are 500 nm.
