Table S2. Centrality measures per variable in the domain-level network

Variable	Betweenness	Closeness	Strength
SWB	-0.500	-0.925	-1.149
PWB	1.500	0.903	0.981
EWB	-0.500	-0.804	-0.509
PD	-0.500	0.826	0.676

Note: SWB: Social well-being; PWB: Psychological well-being; EWB: Emotional well-being; PD: Psychological distress

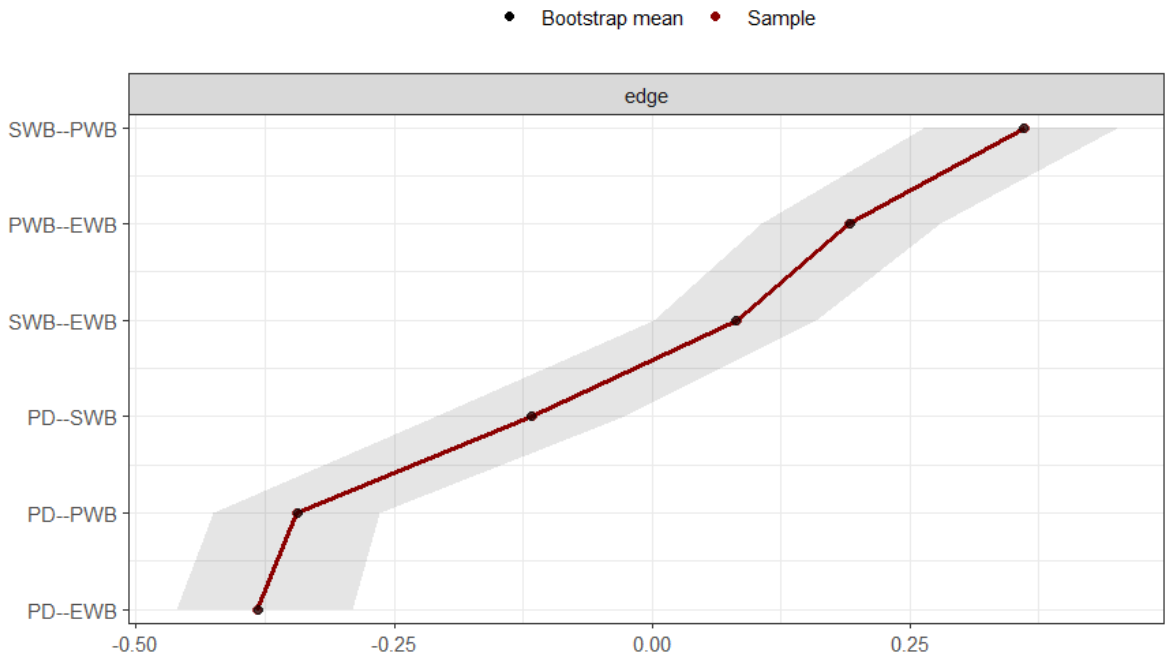

Figure S1. Stability of edge weights in the domain-level network
Note: The red line represents the edge weight values, while the gray area depicts the 95% confidence intervals (CIs).

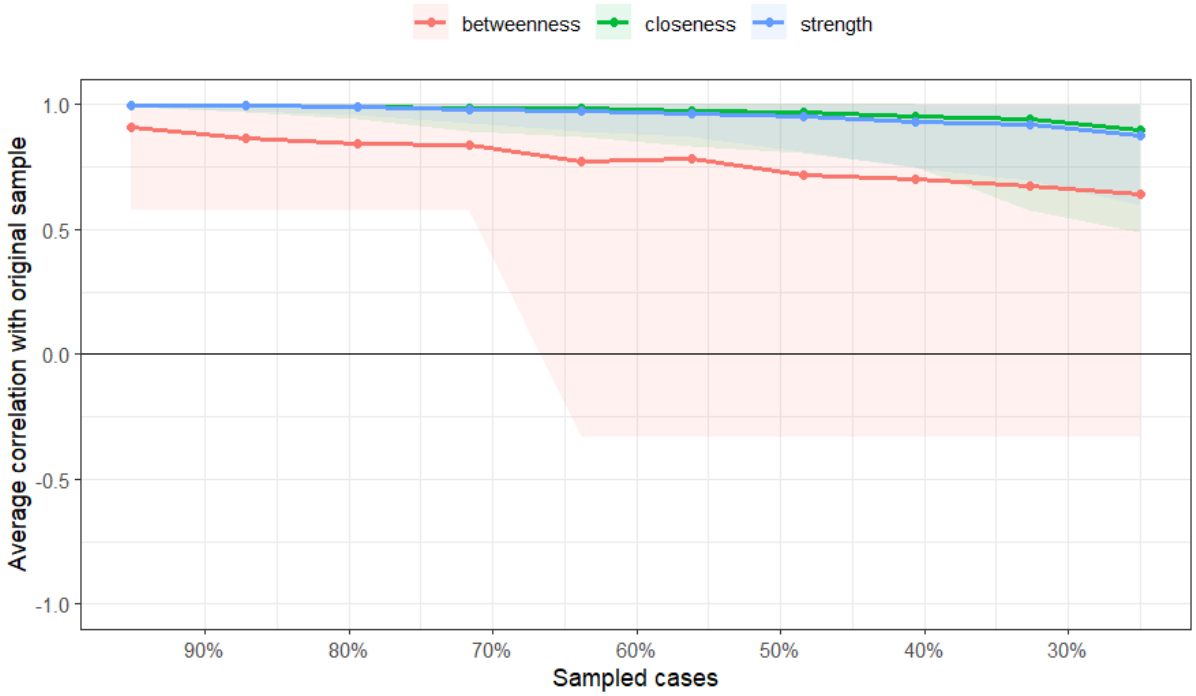

Figure S2. Stability of node centrality in the domain-level network

Note: Average correlation between node strength, closeness, expected influence, and betweenness with sampled cases dropped compared to the original sample. The colored lines show the mean values, and the shaded areas indicate the range from the 2.5th quantile to the 97.5th quantile.

Table S3. The abbreviation, mean scores, and standard deviations for each variable in the item-level network.

Variables	Abbreviation	M	SD
Components of Social Well-Being			
I feel like an important member of society	F1	3.68	.89
I feel close to other members of society	F2	3.38	.91
