

# Neoadjuvant Chemotherapy of Triple-Negative Breast Cancer: Evaluation of Early Clinical Response, Pathological Complete Response Rates, and Addition of Platinum Salts Benefit Based on Real-World Evidence

Milos Holanek, Iveta Selingerova, Ondrej Bilek, Tomas Kazda, Pavel Fabian, Lenka Foretova, Maria Zvarikova, Radka Obermannova, Ivana Kolouskova, Oldrich Coufal, Katarina Petrakova, Marek Svoboda and Alexandr Poprach

## ***BRCA germline mutation testing categorization***

Out of a total of 237 patients, 72 (30%) patients were *BRCA1/2* mutated, 109 (46%) patients were *BRCA1/2* unmutated, and in 56 (24%) patients, the genetic testing was not performed. The age distribution according to *BRCA* testing is shown in Figure S1A. The median age was 37 years in the *BRCA1/2* mutated patients, 44 years in the were *BRCA1/2* unmutated patients and 63 years for untested patients. The untested patients were not indicated to genetic testing following the guidelines for high-risk patients, especially family cancer history was not described. According to a published study[1], the expected prevalence of *BRCA1/2* carriers in women with TNBC diagnosed at age 50 or above is less than 5%. Consequently, the untested patients were considered presumptive noncarriers and analyzed together with *BRCA1/2* noncarriers. Similarly, in the case of unknown *BRCA* status in daily clinical practice, these patients are considered *BRCA1/2* negative.

**Figure S1.** (A) Age distribution according to *BRCA* testing. (B) The proportion of *BRCA1/2* mutation in age decade.
