

SUPPLEMENTARY FIGURES

Figure S1. Gene expression of *CTAG1B* and differentiation antigens *TYR* and *MLANA* in melanoma tumours. **(a)** mRNA co-expression of *CTAG1B* and *TYR* ($r=-0.06$, $p\text{-value}=0.165$) or **(b)** *MLANA* ($r=-0.05$, $p\text{-value}=0.268$) in melanoma patients using the TCGA dataset (Skin Cutaneous melanoma, TCGA, Firehose Legacy) consisting of 472 samples (469 patients). mRNA expression is shown as z-scores relative to all samples (log RNA Seq V2 RSEM), and correlation is analysed using the Pearson correlation. TCGA, The Cancer Genome Atlas.

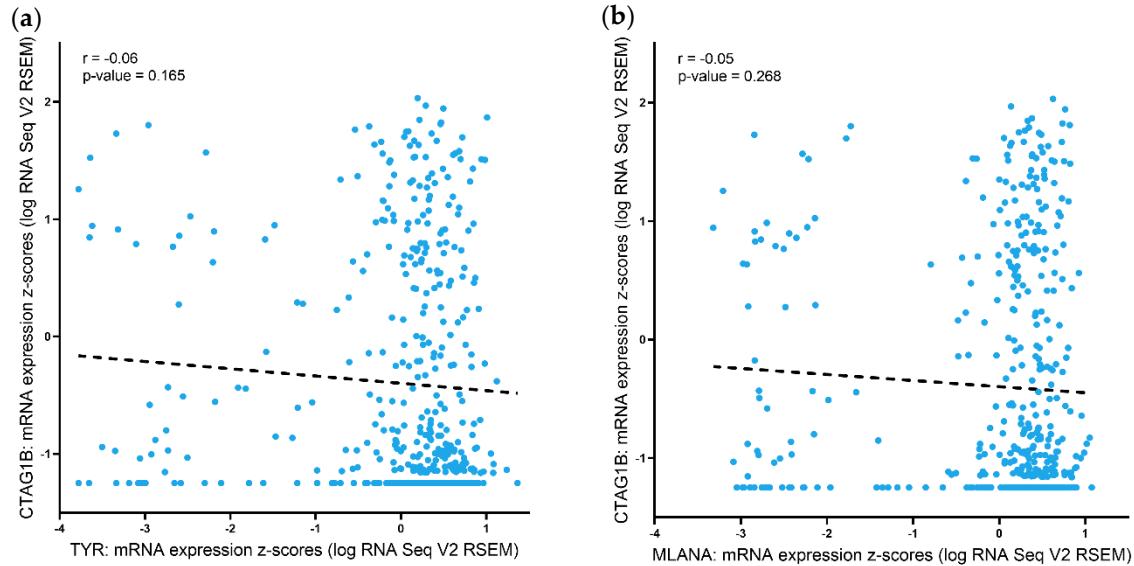

Figure S2. Gene expression of *ROPN1*, *ROPN1B* and *CTAG1B* by AJCC disease stage codes in melanoma tumours. (a) mRNA expression of *ROPN1* (p -value=0.1793), (b) *ROPN1B* (p -value=0.1396) and (c) *CTAG1B* (p -value=0.3375) in melanoma patients according to the Neoplasm Disease Stage AJCC codes using the TCGA dataset (Skin Cutaneous melanoma, TCGA, Firehose Legacy) consisting of 472 samples (469 patients). mRNA expression is shown as z-scores relative to all samples (log RNA Seq V2 RSEM). TCGA, The Cancer Genome Atlas.

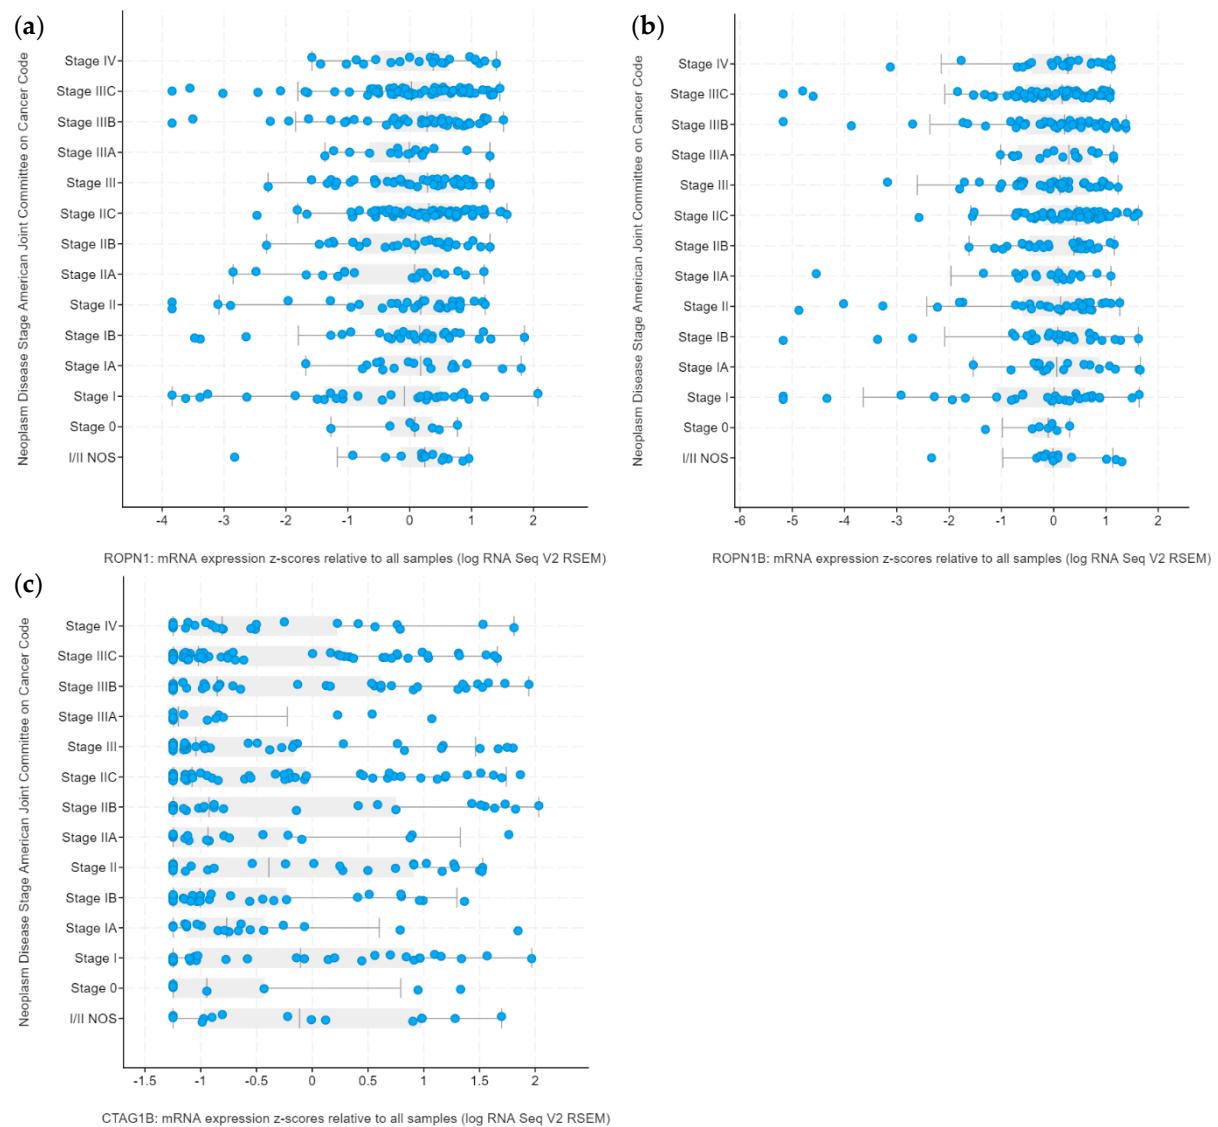

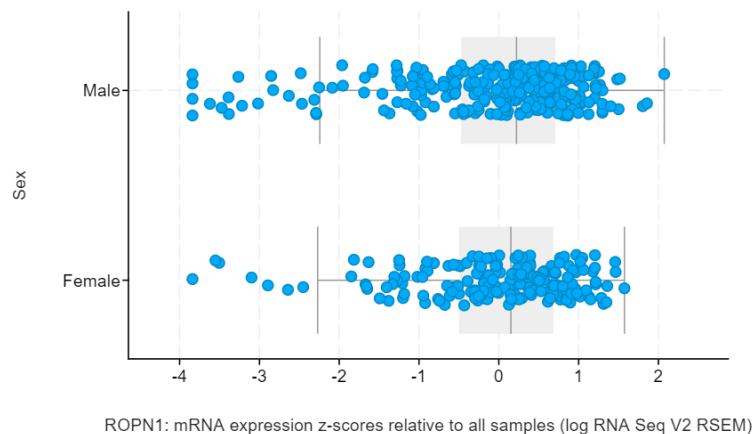

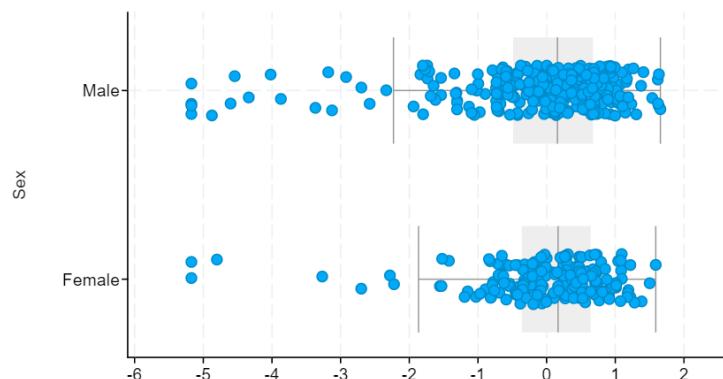

Figure S3. Gene expression of *ROPN1*, *ROPN1B* and *CTAG1B* by gender in melanoma tumours. (a) mRNA expression of *ROPN1* ($p\text{-value}=0.9437$), (b) *ROPN1B* ($p\text{-value}=0.3623$) and (c) *CTAG1B* ($p\text{-value}=0.8291$) in melanoma patients according to gender using the TCGA dataset (Skin Cutaneous melanoma, TCGA, Firehose Legacy) consisting of 472 samples (469 patients). mRNA expression is shown as z-scores relative to all samples (log RNA Seq V2 RSEM). TCGA, The Cancer Genome Atlas.

(a)

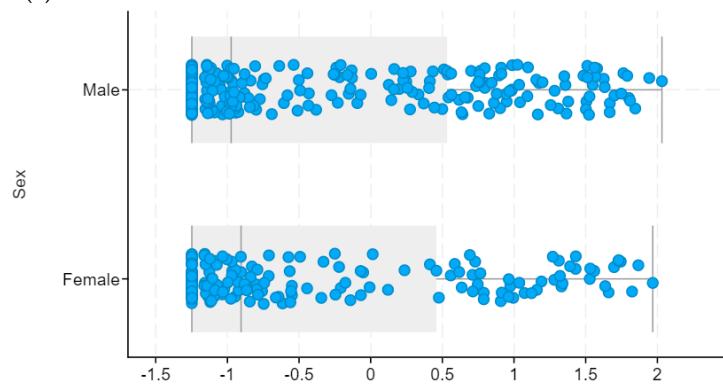

ROPN1: mRNA expression z-scores relative to all samples (log RNA Seq V2 RSEM)

(b)

ROPN1B: mRNA expression z-scores relative to all samples (log RNA Seq V2 RSEM)

(c)

CTAG1B: mRNA expression z-scores relative to all samples (log RNA Seq V2 RSEM)

Figure S4. Cytoplasmic expression of ROPN1B, NY-ESO-1 and MLANA in melanoma tumours. Multispectral immunohistochemistry of melanoma tumour cores showing staining for ROPN1B, NY-ESO-1 or MLANA with MHC class I. Representative region of interest showing ROPN1B (**a1**) and MHC Class I (**a2**), NY-ESO-1 (**b1**) and MHC Class I (**b2**), or MLANA (**c1**) and MHC Class I (**c2**) staining patterns. Tissue microarrays were stained with anti-ROPN1B (green), anti-NY-ESO-1 (red) or anti-MLANA (orange) and anti-MHC Class I (white) antibodies with DAPI (blue) counterstain, and are displayed as merge (**a**, **b** and **c**) and single colours (**a1**, **a2**, **b1**, **b2**, **c1** and **c2**). All images were taken using a 40x objective, and scale bars indicate 50µm or 100µm.

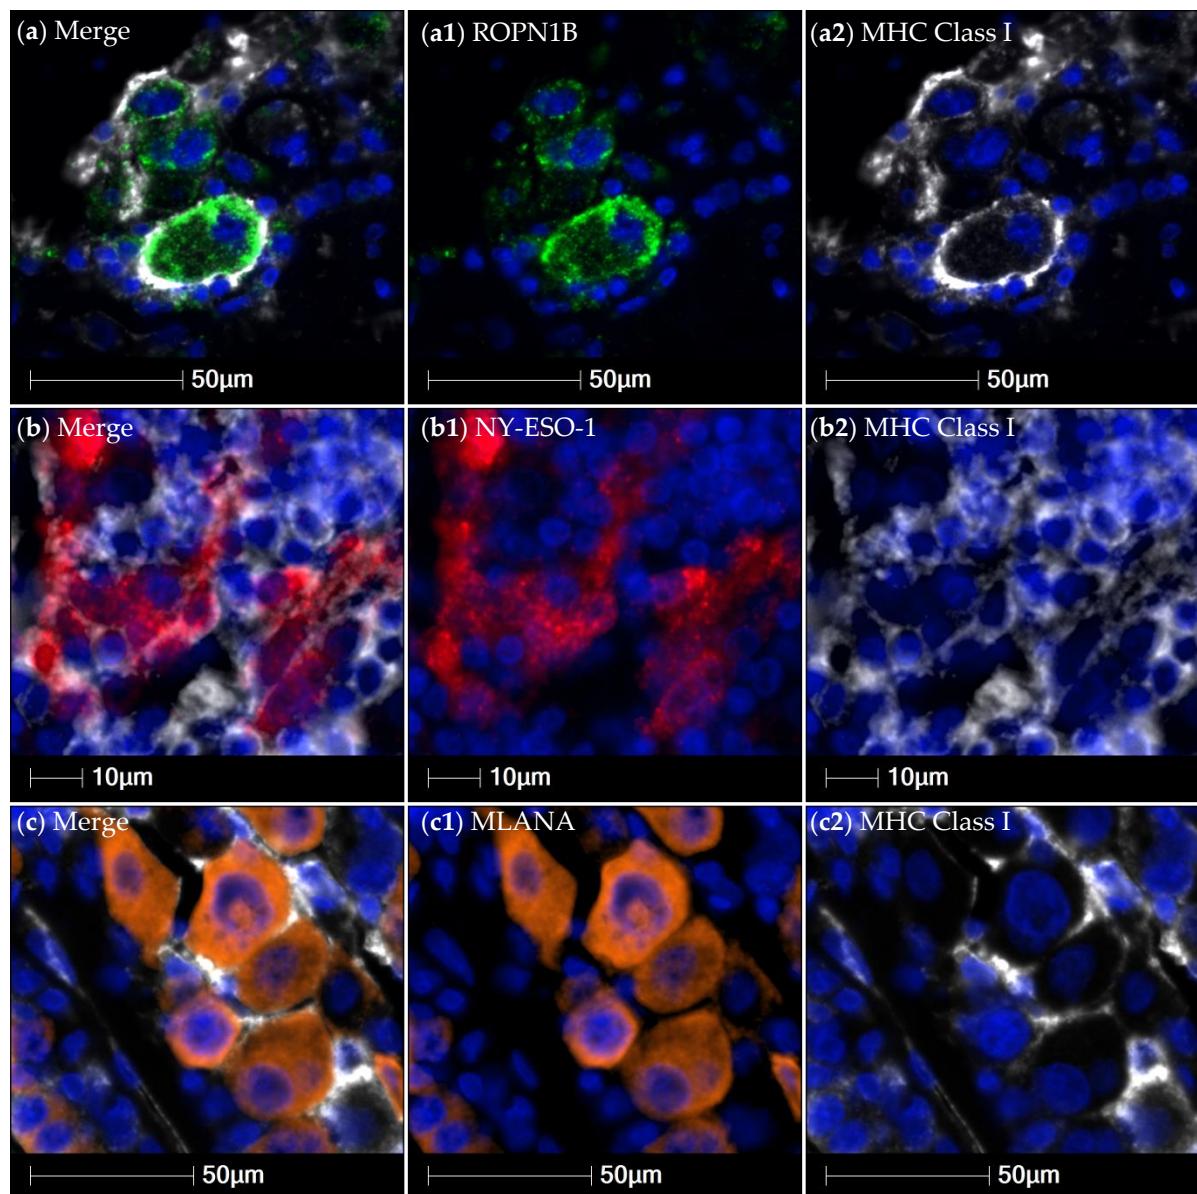

Figure S5. Variability seen between concentrated ROPN1B and diffuse NY-ESO-1 staining patterns in melanoma tumours. Multispectral immunohistochemistry of a melanoma tumour core showing staining for ROPN1B, NY-ESO-1, MLANA and SOX10. (a) Representative region of interest showing ROPN1B (a1) and NY-ESO-1 (a2) staining patterns. Tissue microarrays were stained with anti-ROPN1B (green), anti-NY-ESO-1 (red), anti-MLANA (orange) and anti-SOX10 (yellow) antibodies with DAPI (blue) counterstain, and are displayed as merge (a) and single colour (a1-a4) cores. Whole tumour cores with more than 2% of the tissue cells staining for the target proteins were considered positive. All images were taken using a 20x objective, and scale bars indicate 100 μ m (core) or 50 μ m (region of interest).

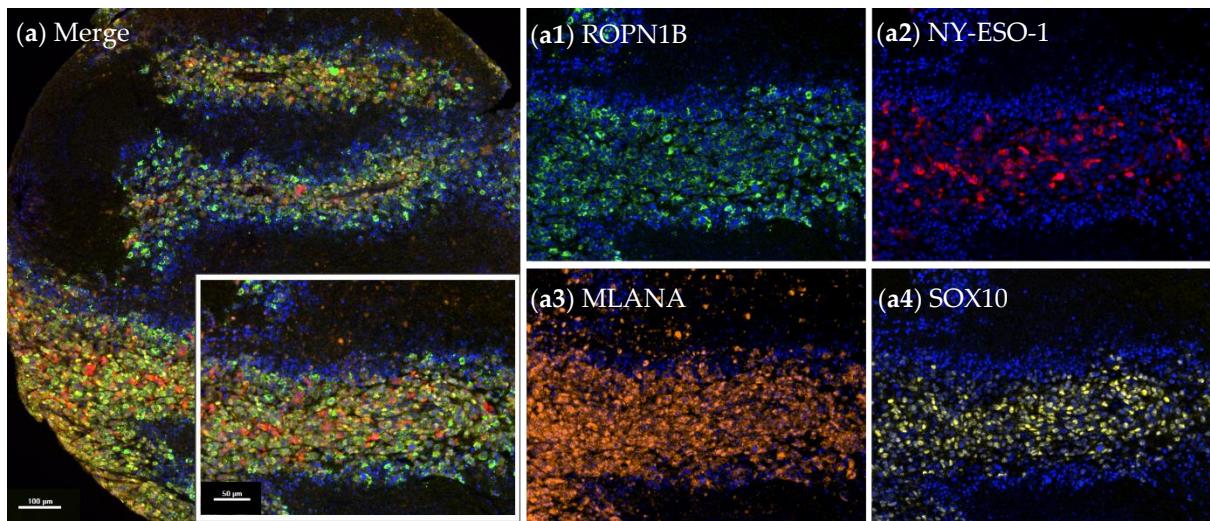

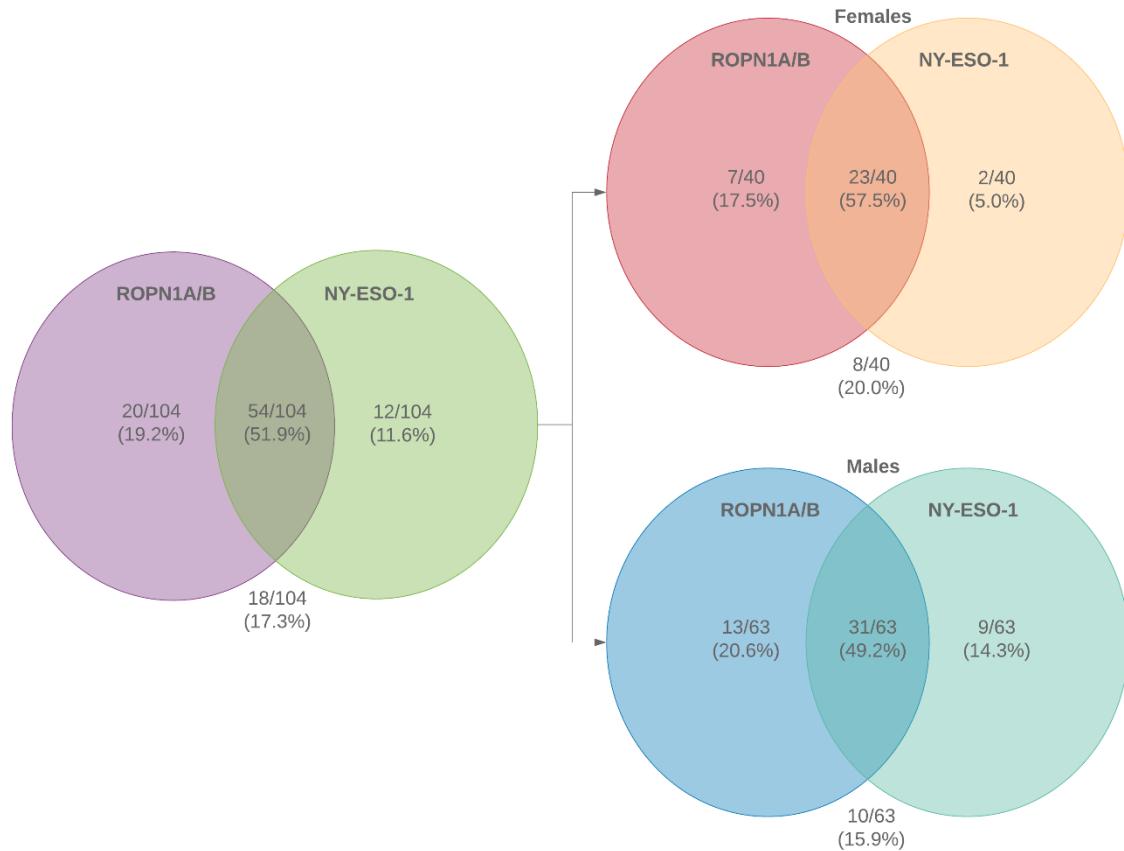

Figure S6. Venn diagram displaying predominance of ROPN1A/B and NY-ESO-1-specific antibodies in melanoma patients by gender. Antibody titres were measured in 104 melanoma patients using a custom protein microarray platform, and all resulting intensities above 500 RFU (defined noise threshold) were considered positive signals and plotted using 2-way Venn diagrams. RFU, relative fluorescent units.

SUPPLEMENTARY TABLES

Table S1. Specifications of antibodies and conditions used for multispectral immunohistochemistry.

Primary monoclonal antibody	Clone	Optimal concentration	Epitope retrieval
ROPN1B (Sigma-Aldrich, St. Louis, MO, USA, # HPA052530)	Polyclonal	1:500 dilution	pH 6
NY-ESO-1 (Invitrogen, Carlsbad, CA, USA, #35-6200)	E978	1:100 dilution, 5µg/mL	pH 9
MLANA (Novus Biologicals, Littleton, CO, USA, #NBP1-30151)	A19-P	1:100 dilution	pH 9
SOX-10 (Abcam, Cambridge, UK, #ab195364)	BC34	1:100 dilution, 125µg/mL	pH 9
MHC Class I (in-house)	-	1:3000 dilution	pH 9

Table S2. ROPN1A, ROPN1B, NY-ESO-1, MLANA and TYR-specific antibodies in melanoma patients. Antibody titres were measured in 104 melanoma patients using a custom protein microarray platform, and all resulting intensities above 500 RFU (defined noise threshold) were considered positive signals.
