

**Figure S1: Receiver Operating Characteristic (ROC) curve of the model developed**

The curve shows the predictive power of the scoring system for early progression (PFS < 3 months).  
The AUC of the model was 0.76 (95% CI: 0.70-0.81).

**Table S1. Beta-coefficients used to build the score system.**

Clinical characteristics	beta coefficient (S.E.)
SEX (F vs. M)	0.71 (0.28)
ECOG PS	
(1 vs. 0)	0.57 (0.30)
(2 vs. 0)	1.72 (0.42)
CONCOMITANT STEROIDS (yes vs. no)	0.82 (0.26)
NUMBER OF METASTATIC SITES (≥2 vs. ≤1)	0.78 (0.27)
LIVER METS (yes vs. no)	0.82 (0.39)
PLEURAL METS (yes vs. no)	0.79 (0.29)

S.E. standard error
