

SUPPLEMENTAL FIGURES and TABLES

SUPPLEMENTAL FIGURES

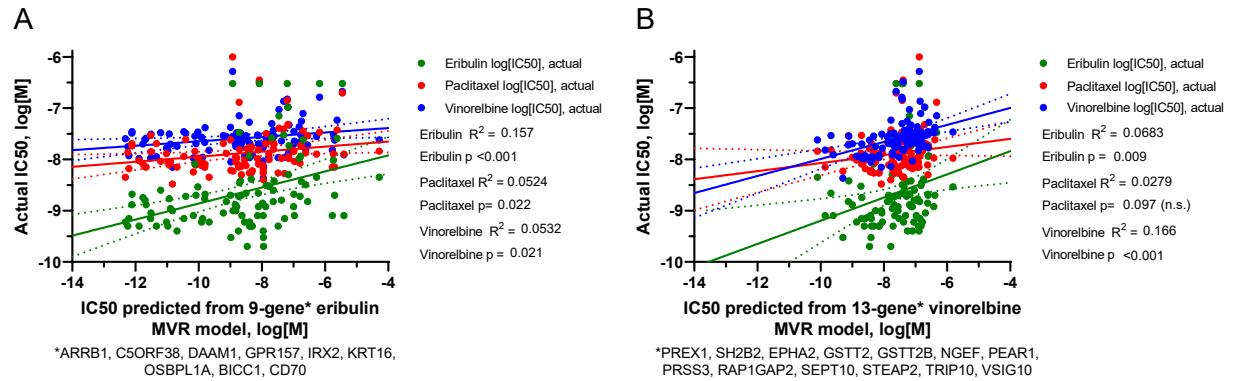

Supplemental Figure S1

Supplemental Figure S1. Linear regression analyses of gene expression ($\log_2[\text{RPKM}]$) versus $\log[\text{M}]$ IC50 for eribulin and vinorelbine UFGs. (A-G), eribulin up genes; (H, I), eribulin down genes; (J, K), vinorelbine up genes; (L-V), vinorelbine down genes. Linear regression lines (solid) are shown together with their corresponding 95% confidence bands (dotted).

Supplemental Figure S2

Supplemental Figure S2. Predicted versus actual IC₅₀s based on full UFG set MVR models. Predicted IC₅₀s were derived from (A) all 9 eribulin UGFs, and (B) all 13 vinorelbine UGFs. Linear regression lines (solid) are shown together with their corresponding 95% confidence bands (dotted). For visual comparison, scales of x- and y-axes were kept the same between both panels here and Panels A and C of Figure 5.

SUPPLEMENTAL TABLES

Supplemental Table S1: 100 CCL cell lines and their antiproliferative IC50s against eribulin, paclitaxel and vinorelbine									
Cell line	Tissue of origin	IC50, nM			Cell line	Tissue of origin	IC50, nM

Supplemental Table 2 footnotes:

- ¹ Positive and negative associations with response reflect higher and lower expression levels of specific genes between the most sensitive and least sensitive cell line quartiles, respectively.
- ² Fold-changes represent ratios of mean expression levels of individual genes between most sensitive and least sensitive cell line quartiles.
- ³ The indicated 9 genes were shared by eribulin and vinorelbine. No genes were shared between eribulin and paclitaxel.
- ⁴ Only one gene was shared by paclitaxel and vinorelbine.

Supplemental Table 3 footnotes:

¹ Listed in order of decreasing network enrichment score.

² 7/9 eribulin UFGs and 13/13 vinorelbine UFGs were captured in the network propagation analyses. The 2 uncaptured eribulin UFGs were C5ORF38 and GPR157.

³ Shared between eribulin and vinorelbine.
