

BrdU for 1 h → AUF treatment → Recovery → PI staining → Flow cytometry

Figure S3. Effect of AUF on cell cycle. MDA-MB-231 cells were labeled with BrdU for 1 h and then subjected to two conditions for 30 min: non-treated (NT) or treated with 6 μ M AUF. After a defined recovery time in growth media (0, 4, 8, or 24 h), cells were removed and proceeded for PI staining and flow cytometry. Representative graphs of two experiments are shown.
