

Figure S1. Carboplatin challenge performed at earlier passages demonstrates repeated sublethal carboplatin exposure induces chemoresistance in RB028 (EC_{50} for RB028^{Naive} $\sim 0.3316 \mu\text{M}$; EC_{50} for RB028^{2xC} $\sim 2.508 \mu\text{M}$; EC_{50} for RB028^{4xC} $\sim 31.10 \mu\text{M}$).
