

Supplementary

Figure S1. Effects of ATB320 on changes in serum TGF-βs levels. Levels of TGF-β1 and TGF-β2 in the blood serum of hu-PBL NSG-B2m mice were detected by the Luminex assay on day 23. Data showing the concentration of (A) TGF-β1 and (B) TGF-β2 in serum. The results are expressed as mean±S.E.M. obtained from six mice per group. ## $p < 0.01$ vs. Tumor only group; ** $p < 0.01$ vs. PBMC+Vehicle group (Dunnett's test).
