

Supplementary Materials

Supplementary Text S1: classification of treatments.

Supplementary Figure S1: flow diagram.

Supplementary Table S1: PRISMA 2020 checklist.

Supplementary Table S2: clinical and laboratory data of cHL/follicular composite lymphomas.

Supplementary Table S3: histopathological and molecular data of cHL/follicular composite lymphomas.

Supplementary Table S4: clinical and laboratory data data of cHL/mantle-cell composite lymphomas.

Supplementary Table S5: histopathological and molecular data of cHL/mantle-cell composite lymphomas).

Supplementary Table S6: clinical and laboratory data of cHL/marginal zone composite lymphomas.

Supplementary Table S7: histopathological and molecular data of cHL/marginal zone composite lymphomas.

Supplementary Table S8: clinical and laboratory data of cHL/diffuse large B-cells composite lymphomas.

Supplementary Table S9: histopathological and molecular data of cHL/diffuse large B-cells composite lymphomas.

Supplementary Table S10: clinical and laboratory data of cHL/NLPHL composite lymphomas.

Supplementary Table S11: histopathological and molecular data of cHL/NLPHL composite lymphomas.

Supplementary Table S12: clinical and laboratory data of cHL/T-cell composite lymphomas.

Supplementary Table S13: histopathological and molecular data of cHL/T-cell composite lymphomas.

Supplementary Text S1: classification of treatments.

For treatments, since the chemotherapy used were different between studies/case reports, lymphoma treatments were classified in five groups as follows: i) cHL-like chemotherapy; ii) B-cell lymphoma-like chemotherapy (small B-cell and diffuse large B-cell (DLBCL) lymphoma); iii) T-cell lymphoma-like chemotherapy; and iv) composite lymphoma-like chemotherapy (combination of cHL-like chemotherapy and another molecule or chemotherapy to treat both contingents).

cHL-like chemotherapy

ABVD +/- RT (doxorubicin, vinblastine, bleomycin, dacarbazine +/- radiotherapy), ChiIVPP (chlorambucil, vinblastine, procarbazine, prednisolone), CVPP (cyclophosphamide, vinblastine, procarbazine, prednisolone), COPP (cyclophosphamide, vincristine, procarbazine, prednisolone), vinblastine (VELBE), IVOx (ifosfamide, etoposide, oxaliplatin), cisplatin + prednisone + BCNU (cyclophosphamide, carmustine), BEACOPP (bleomycin, etoposide, doxorubicin, cyclophosphamide, vincristine, procarbazine, prednisone), BV-ICE (brentuximab, vedotin, ifosfamide, carboplatin, etoposide) were considered as cHL-like chemotherapy.

B-cell lymphoma-like chemotherapy

R-CHOP +/- RT (rituximab, doxorubicin, methylprednisolone, cyclophosphamide, vincristine +/- radiotherapy) or CHOP +/- RT, EPOCH (etoposide, vincristin, adriamycin, cyclophosphamide, prednisone), bendamustine were considered as small B-cell lymphoma-like chemotherapy.

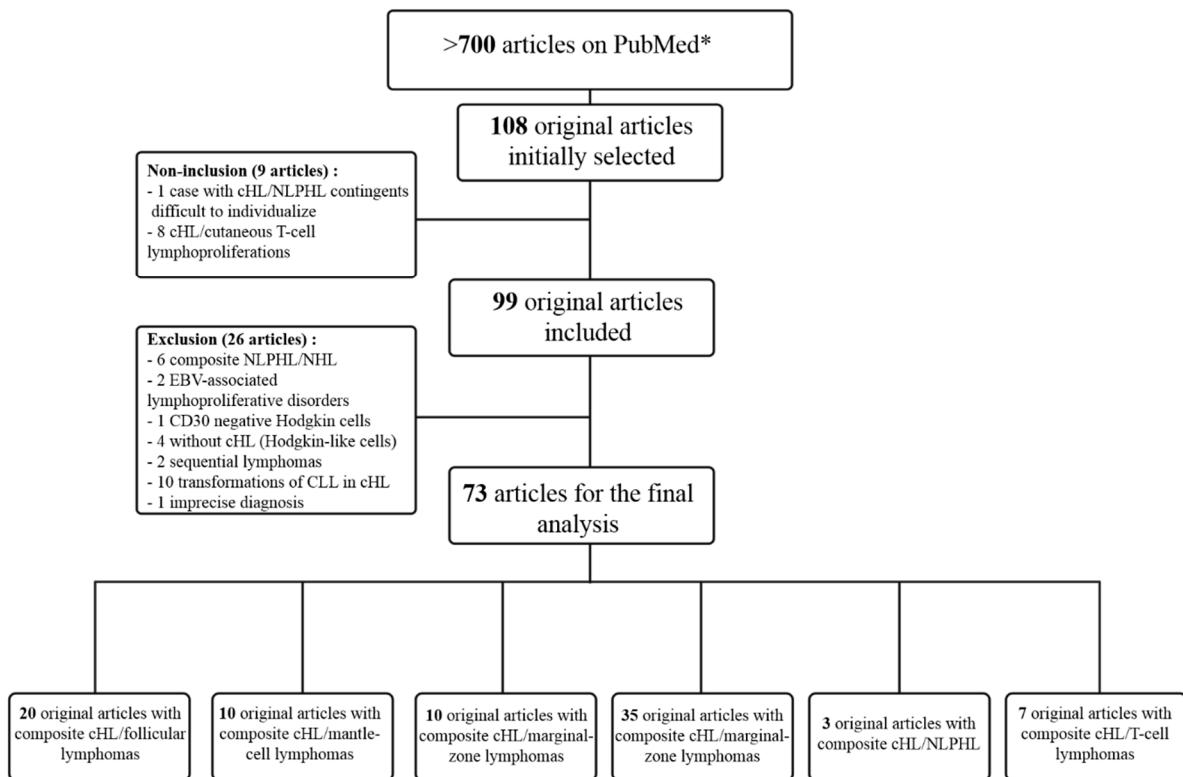

R-CHOP, CHOP, R-DHAOx (rituximab dexamethasone cytarabine oxaliplatin), R-ACVBP (rituximab, doxorubicin, cyclophosphamide, vindesine, bleomycin, prednisone), R-COPADM (rituximab, cyclophosphamide, vincristine, prednisone, adriamycin, high-dose methotrexate) + CYM (cytarabine, methotrexate, prednisone), MACOP-B (methotrexate, doxorubicin, cyclophosphamide, vincristine, prednisone, bleomycin), R-EPOCH, ProMACE-MOPP (prednisone, methotrexate, doxorubicin, cyclophosphamide, etoposide, and mechlorethamine, vincristine, procarbazine, prednisone), ProMACE CytaBOM (cyclophosphamide, doxorubicin, etoposide and cytozar, bleomycin, vincristine, methotrexate prednisone), were classified as DLBCL-like chemotherapy.

T-cell lymphoma-like chemotherapy

CHO(E)P and GDP (Gemcitabine, Dexamethasone, Cisplatin) were considered as T-cell lymphoma-like chemotherapy.

Composite lymphoma-like chemotherapy

The combination of chemotherapies as R-ABVD (rituximab, doxorubicin, vinblastine, bleomycin, dacarbazine), C-MOPP (cyclophosphamide, vincristine, procarbazine, prednisone) + ABVD or MOPP (mechlorethamine, vincristine, procarbazine, prednisone) + ABV, R-BEACOPP, ABVD or CHOP combined with R-ICE (rituximab, ifosfamide, carboplatin, etoposide), ICE + LEED (L-PAM, etoposide, cyclophosphamide, and dexamethazone), ABDV + CHO(E)P or ABDV + chidamide, and RT + R-CODOX-M/IVAC (rituximab, cyclophosphamide, doxorubicin, vincristine, methotrexate/ifosfamide, etoposide, high dose cytarabine), R-DHAOX (rituximab, dexamethasone, high-dose cytarabine, oxaliplatin) were considered as composite lymphoma-like chemotherapy.

Supplementary Figure S1: flow diagram for original article inclusion/exclusion.

*Among the >700 articles found on PubMed using the keywords “composite lymphoma(s)”, “synchronous lymphoma(s)”, “composite AND Hodgkin”, and “synchronous AND Hodgkin”, 108 were initially selected (all composite/synchronous lymphoma case reports or series). However, nine original articles were not included because they did not meet inclusion criteria (see Methods). Among the 99 original articles included, 26 were excluded because they met exclusion criteria (see Methods). As a result, 73 original articles were used for the final analysis. However, many articles reported different types of composite lymphomas, explaining that the sum of all articles is not 73.

CLL: Chronic lymphocytic leukemia; cHL: Classical Hodgkin lymphoma; EBV: Epstein-Barr virus; NHL: Non-Hodgkin lymphoma; NLPHL: Nodular lymphocyte-predominant Hodgkin lymphoma. This figure was created using BioRender (Toronto, Canada).

Supplementary Table S1: PRISMA 2020 checklist.

Section and Topic	Item #	Checklist item	Location where item is reported
TITLE			
Title	1	Identify the report as a systematic review.	p. 1
ABSTRACT			
Abstract	2	See the PRISMA 2020 for Abstracts checklist.	p. 4
INTRODUCTION			
Rationale	3	Describe the rationale for the review in the context of existing knowledge.	p. 5-6
Objectives	4	Provide an explicit statement of the objective(s) or question(s) the review addresses.	p. 5-6
METHODS			
Eligibility criteria	5	Specify the inclusion and exclusion criteria for the review and how studies were grouped for the syntheses.	p. 7
Information sources	6	Specify all databases, registers, websites, organisations, reference lists and other sources searched or consulted to identify studies. Specify the date when each source was last searched or consulted.	p. 7
Search strategy	7	Present the full search strategies for all databases, registers and websites, including any filters and limits used.	p. 7
Selection process	8	Specify the methods used to decide whether a study met the inclusion criteria of the review, including how many reviewers screened each record and each report retrieved, whether they worked independently, and if applicable, details of automation tools used in the process.	p. 7
Data collection process	9	Specify the methods used to collect data from reports, including how many reviewers collected data from each report, whether they worked independently, any processes for obtaining or confirming data from study investigators, and if applicable, details of automation tools used in the process.	p. 7
Data items	10a	List and define all outcomes for which data were sought. Specify whether all results that were compatible with each outcome domain in each study were sought (e.g. for all measures, time points, analyses), and if not, the methods used to decide which results to collect.	p. 7, Supp. Material
	10b	List and define all other variables for which data were sought (e.g. participant and intervention characteristics, funding sources). Describe any assumptions made about any missing or unclear information.	p. 7, Supp. Material
Study risk of bias assessment	11	Specify the methods used to assess risk of bias in the included studies, including details of the tool(s) used, how many reviewers assessed each study and whether they worked independently, and if applicable, details of automation tools used in the process.	p. 7
Effect measures	12	Specify for each outcome the effect measure(s) (e.g. risk ratio, mean difference) used in the synthesis or presentation of results.	p. 8
Synthesis methods	13a	Describe the processes used to decide which studies were eligible for each synthesis (e.g. tabulating the study intervention characteristics and comparing against the planned groups for each synthesis (item #5)).	p. 7
	13b	Describe any methods required to prepare the data for presentation or synthesis, such as handling of missing summary statistics, or data conversions.	p. 8
	13c	Describe any methods used to tabulate or visually display results of individual studies and syntheses.	p. 8

Reporting bias assessment	14	Describe any methods used to assess risk of bias due to missing results in a synthesis (arising from reporting biases).	p. 8
Certainty assessment	15	Describe any methods used to assess certainty (or confidence) in the body of evidence for an outcome.	NA
RESULTS			
Study selection	16a	Describe the results of the search and selection process, from the number of records identified in the search to the number of studies included in the review, ideally using a flow diagram.	p. 9
	16b	Cite studies that might appear to meet the inclusion criteria, but which were excluded, and explain why they were excluded.	p. 9
Study characteristics	17	Cite each included study and present its characteristics.	p. 9 -17
Risk of bias in studies	18	Present assessments of risk of bias for each included study.	NA
Results of individual studies	19	For all outcomes, present, for each study: (a) summary statistics for each group (where appropriate) and (b) an effect estimate and its precision (e.g. confidence/credible interval), ideally using structured tables or plots.	Tables 1-3
Results of syntheses	20a	For each synthesis, briefly summarise the characteristics and risk of bias among contributing studies.	p. 10-17
	20b	Present results of all statistical syntheses conducted. If meta-analysis was done, present for each the summary estimate and its precision (e.g. confidence/credible interval) and measures of statistical heterogeneity. If comparing groups, describe the direction of the effect.	Table 1-3
	20c	Present results of all investigations of possible causes of heterogeneity among study results.	NA
	20d	Present results of all sensitivity analyses conducted to assess the robustness of the synthesized results.	NA
Reporting biases	21	Present assessments of risk of bias due to missing results (arising from reporting biases) for each synthesis assessed.	NA
Certainty of evidence	22	Present assessments of certainty (or confidence) in the body of evidence for each outcome assessed.	NA
DISCUSSION			
Discussion	23a	Provide a general interpretation of the results in the context of other evidence.	p. 18-19
	23b	Discuss any limitations of the evidence included in the review.	p. 24
	23c	Discuss any limitations of the review processes used.	p. 24
	23d	Discuss implications of the results for practice, policy, and future research.	p. 24-25

OTHER INFORMATION			
Registration and protocol	24a	Provide registration information for the review, including register name and registration number, or state that the review was not registered.	p. 8
	24b	Indicate where the review protocol can be accessed, or state that a protocol was not prepared.	NA
	24c	Describe and explain any amendments to information provided at registration or in the protocol.	NA
Support	25	Describe sources of financial or non-financial support for the review, and the role of the funders or sponsors in the review.	p. 28
Competing interests	26	Declare any competing interests of review authors.	p. 28
Availability of data, code and other materials	27	Report which of the following are publicly available and where they can be found: template data collection forms; data extracted from included studies; data used for all analyses; analytic code; any other materials used in the review.	Supp. Material

Gualco <i>et al.</i> , 2009 [110]	55	F	No	Cervical LN and mediastinal	NA	Yes	II B	NA	Anemia, LDH and β2-microglobulin increase	CT-scan: mediastinal lymphadenopathy	NA	NA	NA	NA
Sanchez <i>et al.</i> , 2006 [11]	65	M	No	Cervical, axillary, right groin, iliac, and splenomegaly and liver involvement	2,1	Yes	NA	Dysuria	Normal blood cell count and chemistry panel	CT-scan: extensive lymphadenopathy throughout the abdomen and pelvis, splenomegaly	Cyclophosphamide, prednisone and then C-MOPP	Dead of sepsis and hepatic encephalopathy after 3 weeks	0.75	0.75
Brown <i>et al.</i> , 2004 [112]	60	M	No	Cervical LN	NA	No	IV A	Fever and night sweats	NA	BM+: PTCL (20-30% involved)	CHOP x4 at first, then ESHAP, and then autologous-PBSCT after relapse	NA	NA	NA
Wlodarska <i>et al.</i> , 1993 [113]	54	M	HL 3 years earlier	Cervical, axillary, mediastinal, retroperitoneal LN	NA	Yes	NA	Arthritis	NA	BM-	NA	NA	NA	NA
Gui <i>et al.</i> , 2020 [114]	44	M	No	Bilateral axillary, cervical, inguinal, mediastinal, paraailliac, retroperitoneal LN	4	No	IV A	NA	LDH and β2-microglobulin in normal range	PET-scan: bilateral axillary, cervical, inguinal, mediastinal and paraailliac, retroperitoneal LN BM+: T-cell lymphoma (3,5%)	ABVD x1, chidamide, followed by GDP x1	Partial remission	NA	NA
Demurtas <i>et al.</i> , 2011 (case 17) [60]	84	M	No	Axillary LN	NA	NA	NA	NA	NA	NA	NA	NA	Loss to follow-up	Loss to follow-up

BM+/-: Involvement or not on bone marrow biopsy; cHL: classical Hodgkin lymphoma; CT-scan: computed tomography-scan; F: Female; LDH: Lactate dehydrogenase; LN: Lymph node(s); M: Male; MF: Mycosis fungoid; NA: Not available; PET-scan: Positron emission tomography-scan; PTCL: Peripheral T-cell lymphoma; RT: Radiotherapy. For chemotherapy abbreviations, please see **Supplementary Text S1**.

Supplementary Table S13: histopathological and molecular data of cHL/T-cell composite lymphomas.

References	cHL type	T-cell lymphoma type	Separated / mixed contingents	Immunophenotype cHL	Immunophenotype T-cell lymphoma	Clonal B rearrangements (cHL)	Clonal T rearrangements (T-cell lymphoma)	Other molecular alterations
Ichikawa <i>et al.</i> , 2017 (case 1) [109]	cHL-MC	PTCL	NA	CD30+, CD15-, CD20-, PAX5+, EBER-	CD3+, CD4-, CD8+, TIA1+, Granzyme B-, EBER-	NA	NA	On whole tissue sample: clonal rearrangements of IgH and TCR γ
Ichikawa <i>et al.</i> , 2017 (case 2) [109]	cHL-MC	PTCL	NA	CD30+, CD15-, CD20+, PAX5+, EBER-	CD3+, CD4-, CD8+, TIA1+, Granzyme B-, FOXP3-, EBER-	NA	NA	On whole tissue sample: clonal rearrangements of IgH and TCR γ
Ichikawa <i>et al.</i> , 2017 (case 3) [109]	cHL-MC	PTCL	NA	CD30+, CD15+, CD20-, PAX5+, EBER-	CD3+, CD4+, CD8-, TIA1-, Granzyme B-, FOXP3+, EBER-	NA	NA	On whole tissue sample: clonal rearrangements of IgH and TCR γ
Ichikawa <i>et al.</i> , 2017 (case 4) [109]	cHL-MC	T-cell prolymphocytic leukemia	NA	CD30+, CD15+, CD20-, PAX5+, EBER-	CD3+, CD4-, CD8+, TIA1+, Granzyme B-, EBER-	NA	NA	On whole tissue sample: clonal rearrangements of IgH and TCR γ
Ichikawa <i>et al.</i> , 2017 (case 5) [109]	cHL-MC	T-cell prolymphocytic leukemia	NA	CD30+, CD15+, CD20-, PAX5+, EBER-	CD3+, CD4-, CD8+, TIA1+, Granzyme B-, EBER-	NA	NA	On whole tissue sample: clonal rearrangements of IgH and TCR γ
Gualco <i>et al.</i> , 2009 [110]	cHL	PTCL	NA	CD30+, CD15+, CD20-, EBER+, LMP1+, CD3-, CD45-	CD30-, CD15-, CD3+, CD4+, CD8-, CD56-, Ki67: 80%	Clonal IgH rearrangement	Clonal TCR γ and β rearrangement	NA
Sanchez <i>et al.</i> , 2006 [111]	cHL	PTCL	NA	CD30+, CD15+, CD20-, EBER+, CD45-, ALK1-	CD3+, CD5-	NA	NA	On whole tissue sample: TCR γ rearrangement : same rearrangements on both sites with both composite lymphomas No IgH rearrangement
Brown <i>et al.</i> , 2004 [112]	cHL-NS	PTCL	Separated (synchronous)	CD30+, CD15+, CD20-, EBER-, CD3-, CD45-	CD30-, CD15-, CD3+, CD5+, CD7-, CD45+, CD10-	NA	NA	Similar clonal TCR γ rearrangement in both site involved by T-cell lymphoma
Wlodarska <i>et al.</i> , 1993 [113]	cHL	PTCL	Mixed	CD30+, CD15+, CD20+, CD3-, CD4-, CD5-, CD8-	CD30-, CD15-, CD3+, CD4+, CD5+, CD8-, CD45+	NA	NA	On whole tissue sample: TCR γ and β rearrangements
Gui <i>et al.</i> , 2020 [114]	cHL	Cytotoxic CD8+ T-cell lymphoma	NA	CD30+, CD15+, PAX5+, MUM1+, EBER+, Ki67: 60%	CD30-, CD20-, CD2+, CD3+, CD4+(weak), CD5+, CD7+, CD8+, TIA1+, Granzyme B-, CD10-, CXCL13-, PD1+, CD56-, Ki67: 40%	NA	NA	On whole tissue sample: TCR β and δ rearrangements
Demurtas <i>et al.</i> , 2011 (case 17) [60]	cHL	PTCL	NA	NA	CD2+, CD3+, CD5-, CD7-, CD8+	No clonal IgH rearrangement	Clonal TCR γ rearrangement	NA

cHL: classical Hodgkin lymphoma; MC: Mixed cellularity; NS: Nodular sclerosis; EBER: Epstein-Barr virus-encoded small RNA *in situ* hybridization; NA: Not available; PTCL: Peripheral T cell lymphoma; +: positive; -: negative.
