

1	Definition of algorithms for patient-stratification to appropriate diagnostic and treatment pathway
2	Definition and validation of gynaecological oncology-specific frailty scores and complication scores
3	Linkage of socioeconomic data with genetic testing data and exploration of barriers to the broad implementation of genetic testing
4	Utilise the audit infrastructure to establish linked networks of tissue banks that can use routinely-collected data and outcomes for translational research as well as with prospectively assessed comprehensive clinical data
5	Define subgroup of patients who will not benefit from standard treatment approaches and need to be directed towards alternative treatment pathways at diagnosis
6	Health systems research to investigate effectiveness of supra-regional networks for ovarian cancer

Box S3 - Priorities and key aspects for research
