

Prevalence and Effect of Low Skeletal-Muscle Mass among Hepatocellular Carcinoma Patients Undergoing Systemic Therapy: A Systematic Review and Meta-Analysis

Supplemental Materials

Table S1 - PRISMA checklist

Table S2 - Search strategy

Table S3 - Excluded studies and reasons

Table S4- Quality of the included cohort studies as assessed by Newcastle–Ottawa Scale.

Table S5 - Subgroup analysis of the prevalence of LSMM among HCC patients undergoing systemic therapy

Table S6 - Subgroup analysis of HR and 95% confidence interval of overall survival among HCC patients undergoing systemic therapy with and without LSMM

Table S7. Subgroup analysis HR and 95% confidence interval of progression free survival among HCC patients undergoing systemic therapy with and without LSMM

Figure S1. Publication bias

Figure S2. Sensitivity analysis

Table S1. PRISMA checklist

Section/topic	#	Checklist item	Reported on page #
TITLE			
Title	1	Identify the report as a systematic review, meta-analysis, or both.	Page 1
ABSTRACT			
Structured summary	2	Provide a structured summary including, as applicable: background; objectives; data sources; study eligibility criteria, participants, and interventions; study appraisal and synthesis methods; results; limitations; conclusions and implications of key findings; systematic review registration number.	Page 3–4
INTRODUCTION			
Rationale	3	Describe the rationale for the review in the context of what is already known.	Page 5
Objectives	4	Provide an explicit statement of questions being addressed with reference to participants, interventions, comparisons, outcomes, and study design (PICOS).	Page 5
METHODS			
Protocol and registration	5	Indicate if a review protocol exists, if and where it can be accessed (e.g., Web address), and, if available, provide registration information including registration number.	Page 3
Eligibility criteria	6	Specify study characteristics (e.g., PICOS, length of follow-up) and report characteristics (e.g., years considered, language, publication status) used as criteria for eligibility, giving rationale.	Page 6
Information sources	7	Describe all information sources (e.g., databases with dates of coverage, contact with study authors to identify additional studies) in the search and date last searched.	Page 6
Search	8	Present full electronic search strategy for at least one database, including any limits used, such that it could be repeated.	Page 6

Study selection	9	State the process for selecting studies (i.e., screening, eligibility, included in systematic review, and, if applicable, included in the meta-analysis).	Page 6-7
Data collection process	10	Describe method of data extraction from reports (e.g., piloted forms, independently, in duplicate) and any processes for obtaining and confirming data from investigators.	Page 7
Data items	11	List and define all variables for which data were sought (e.g., PICOS, funding sources) and any assumptions and simplifications made.	Page 7
Risk of bias in individual studies	12	Describe methods used for assessing risk of bias of individual studies (including specification of whether this was done at the study or outcome level), and how this information is to be used in any data synthesis.	Page 7
Summary measures	13	State the principal summary measures (e.g., risk ratio, difference in means).	Page 7
Synthesis of results	14	Describe the methods of handling data and combining results of studies, if done, including measures of consistency (e.g., I^2) for each meta-analysis.	Page 7-8
Risk of bias across studies	15	Specify any assessment of risk of bias that may affect the cumulative evidence (e.g., publication bias, selective reporting within studies).	Page 8
Additional analyses	16	Describe methods of additional analyses (e.g., sensitivity or subgroup analyses, meta-regression), if done, indicating which were pre-specified.	Page 8
RESULTS			
Study selection	17	Give numbers of studies screened, assessed for eligibility, and included in the review, with reasons for exclusions at each stage, ideally with a flow diagram.	Figure 1
Study characteristics	18	For each study, present characteristics for which data were extracted (e.g., study size, PICOS, follow-up period) and provide the citations.	Table 1
Risk of bias within studies	19	Present data on risk of bias of each study and, if available, any outcome level assessment (see item 12).	Table 2

Results of individual studies	20	For all outcomes considered (benefits or harms), present, for each study: (a) simple summary data for each intervention group (b) effect estimates and confidence intervals, ideally with a forest plot.	Table 1
Synthesis of results	21	Present results of each meta-analysis done, including confidence intervals and measures of consistency.	Figure 2-4 Appendix Table 4 Appendix Table 5
Risk of bias across studies	22	Present results of any assessment of risk of bias across studies (see Item 15).	Table 2
Additional analysis	23	Give results of additional analyses, if done (e.g., sensitivity or subgroup analyses, meta-regression [see Item 16]).	Appendix Figure 1 Appendix Figure 2
DISCUSSION			
Summary of evidence	24	Summarize the main findings including the strength of evidence for each main outcome; consider their relevance to key groups (e.g., healthcare providers, users, and policy makers).	Page 11
Limitations	25	Discuss limitations at study and outcome level (e.g., risk of bias), and at review-level (e.g., incomplete retrieval of identified research, reporting bias).	Page 13
Conclusions	26	Provide a general interpretation of the results in the context of other evidence, and implications for future research.	Page 14
FUNDING			
Funding	27	Describe sources of funding for the systematic review and other support (e.g., supply of data); role of funders for the systematic review.	Page 2

Table S2. Search strategy

Database	Keyword	Date	Results
PubMed	(liver cancer) AND (((sarcopenia) OR ((muscle mass) AND (hand strength)) AND (walking speed))) OR ((muscle mass) AND (hand strength)) OR ((muscle mass) AND (walking speed))	April 05,2023	411
Embase	(((((("muscle mass") AND (hand strength)) AND (walking speed)) OR ("muscle mass") AND (hand strength))) OR ("muscle mass") AND (walking speed))) OR (sarcopenia) AND (liver cancer)	April 05,2023	814
CENTRAL	(liver cancer) AND (((sarcopenia) OR ((muscle mass) AND (hand strength)) AND (walking speed))) OR ((muscle mass) AND (hand strength)) OR ((muscle mass) AND (walking speed))	April 05,2023	19

Table S3. Excluded studies and reasons for exclusion

Reason:

1. Hepatic tumors other than HCC
2. Not related to sarcopenia or muscle mass
3. Receiving other therapy than recommend systemic therapy
4. Absence of statistical data (hazard ratios and 95% confidence intervals) regarding the influence of pretreatment sarcopenia on OS or PFS
5. Overlapping population

	Guo (2022)	0	1	1	1	1	1	1	0	0	6	poor	
	Chen (2023)	0	1	1	1	1	1	1	1	0	7	good	

Studies with 3 or 4 stars in selection domain AND 1 or 2 stars in comparability domain AND 2 or 3 stars in outcome/exposure domain were judged as good quality;

studies with 2 stars in selection domain AND 1 or 2 stars in comparability domain AND 2 or 3 stars in outcome/exposure domain were judged as moderate

quality;

studies with 0 or 1 star in selection domain OR 0 stars in comparability domain OR 0 or 1 stars in outcome/exposure domain were judged as low quality.

The questions in each domain were as follows.

Selection:

Q1. Representativeness of exposed cohort: 1, truly or somewhat representative of a population-based or multi-center study; 0, selected group of users or lack of description of the derivation of the cohort.

Q2. Selection of non-exposed cohort: 1, drawn from the same community as the exposed cohort; 0, drawn from a different source or lack of description of the derivation of the non-exposed cohort.

Q3. Ascertainment of exposure: 1, secure record or structured interview; 0, written self-report or lack of description of validation.

Q4. Demonstration that outcome of interest was not present at start of study: 1, yes; 0, no.

Comparability:

Q1. Study adjusted for age and sex: 1, yes; 0, no

Q2. study controls for any additional factor: 1, yes; 0, no.

Outcome:

Q1. Assessment of outcome: 1, independent blind assessment, confirmed by medical records or record linkage; 0, self-reported or no description.

Q2. Was follow-up long enough for outcomes to occur: 1, duration of follow-up at least 2 years; 0, duration of follow-up < 2 years.

Q3. Loss to follow-up rate: 1, complete follow-up or loss to follow-up rate less than 20%; 0, loss to follow-up rate more than 20% or no statement.

Table S5. Subgroup analysis of the prevalence of LSMM among HCC patients undergoing systemic therapy

Subgroup	Records (N)	Patients (N)	Prevalence (%)	95% CI	I ² (%)
Overall	21	2377	43.4	37.0 – 50.0	89.27
Treatment regimen					
Sorafenib	10	1496	41.7	32.0–52.1	92.88
Lenvatinib	5	447	45.5	32.1–59.5	87.34
Immunotherapy	6	434	44.4	34.0-55.3	78.65
Study region					
Asian country	18	1946	42.2	34.7-50.1	90.63
Non-Asian country	3	431	51.0	46.3–55.7	0
Muscle measured					
SMI	17	1894	44.5	37.7-51.6	87.85
PMI	4	483	38.9	22.7–58.0	93.69
Study quality					
Good	18	2208	42.4	35.3–49.9	90.77
Poor	3	169	49.1	41.6-56.6	0
Observation time					
≥2 years	17	2145	42.9	35.5–50.6	91.16
<2 years	4	232	45.5	36.8-54.4	42.95

SMI, Skeletal muscle mass index; PMI, psoas mass index; CI, confidence interval

Table S6. Subgroup analysis of HR and 95% confidence interval of overall survival among HCC patients undergoing systemic therapy with and without LSMM

Subgroup	Records (N)	Patients (N)	HR	95% CI	p	I ² (%)
Overall	20	2248	1.70	1.46–1.97	< 0.001	29.27
Crude	16	1730	1.68	1.44–1.95	< 0.001	24.37
Adjusted	16	1633	1.84	1.59–2.13	< 0.001	11.07
Treatment regimen						
Sorafenib	11	1496	1.74	1.41–2.14	< 0.001	48.15
Lenvatinib	5	447	1.71	1.22–2.41	0.002	15.13
Immunotherapy	4	305	1.61	1.15–2.24	0.005	< 0.01
Study region						
Asian country	17	1817	1.80	1.54–2.11	< 0.001	15.54
Non-Asian country	3	431	1.31	1.07–1.62	0.010	< 0.01
Muscle measured						
SMI	16	1,765	1.74	1.44–2.10	< 0.001	42.00
PMI	4	483	1.61	1.22–2.11	0.001	< 0.01
Observation time						
≥ 2 years	18	2,145	1.69	1.46–1.96	< 0.001	28.24
< 2 years	2	103	1.94	0.54–6.90	0.308	68.12

All OS studies were of “good” quality

SMI, Skeletal muscle mass index; PMI, psoas mass index; CI, confidence interval

Table S7. Subgroup analysis HR and 95% confidence interval of progression free survival among HCC patients undergoing systemic therapy with and without LSMM

Subgroup	Records (N)	Patients (N)	HR	95% CI	p	I ² (%)
Overall	13	1,400	1.32	1.16-1.51	< 0.001	< 0.01
Crude	9	882	1.57	1.24-1.98	< 0.001	42.37
Adjusted	7	801	1.32	1.10-1.59	0.003	< 0.01
Treatment regimen						
Sorafenib	5	863	1.23	1.03–1.46	0.020	< 0.01
Lenvatinib	2	103	2.08	1.18–3.67	0.012	< 0.01
Immunotherapy	6	434	1.41	1.12-1.78	0.004	< 0.01
Study region						
Asian area	12	1,343	1.34	1.17-1.54	< 0.001	< 0.01
Non-Asian area	1	57	0.99	0.53–1.83	0.974	< 0.01
Study quality						
Good	10	1,231	1.27	1.10–1.46	0.001	< 0.01
Poor	3	169	1.87	1.24-2.81	0.003	< 0.0
Observation time						
Over 2 years	10	1,231	1.27	1.10–1.46	< 0.001	< 0.01
Less than 2 years	3	169	1.87	1.24-2.81	0.003	< 0.01

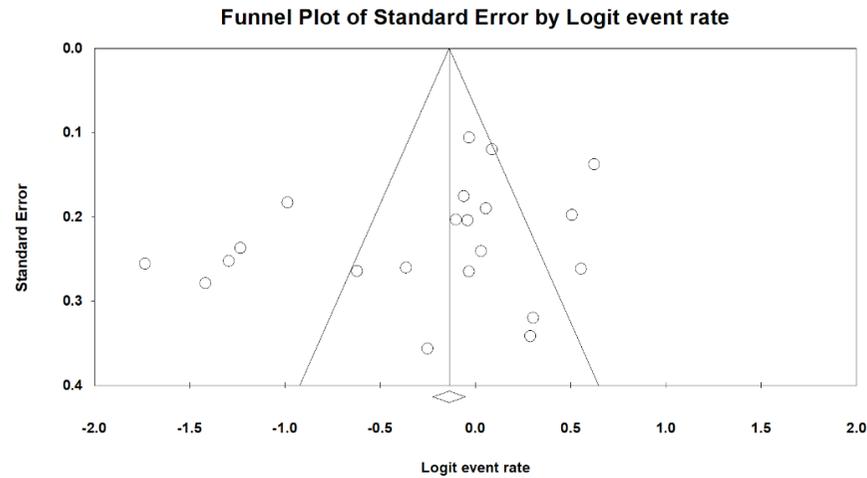

All PFS studies used SMI.

SMI, Skeletal muscle mass index; CI, confidence interval

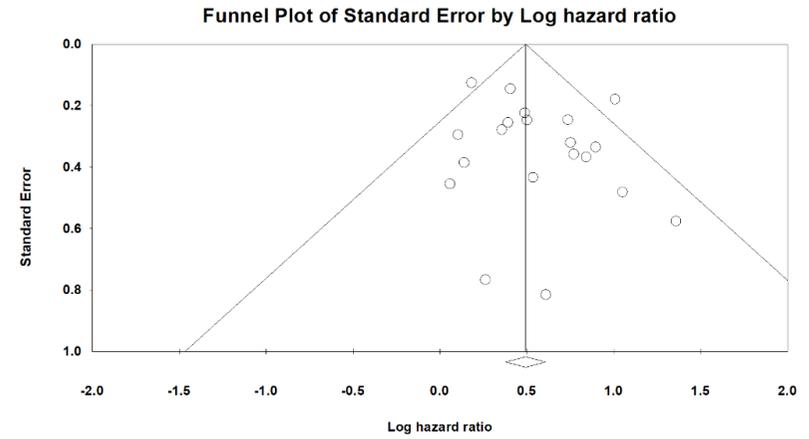

Figure S1. Publication bias analysis using funnel plots for

(A) Prevalence, (B) HRs of overall survival, (C) HR of progression-free survival

(A) Prevalence (Egger's test: $p, 0.10$)

(B) HRs of overall survival (Egger's test: $p, 0.20$)

(C) HR of progression-free survival (Egger's test: $p, 0.10$)

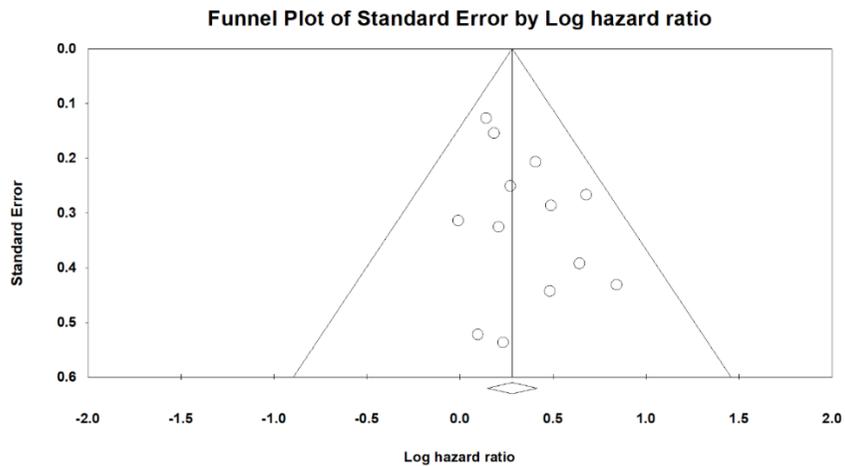

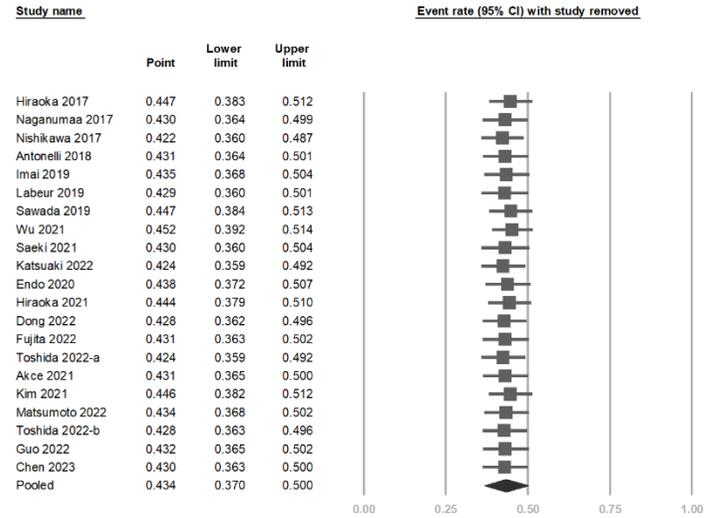

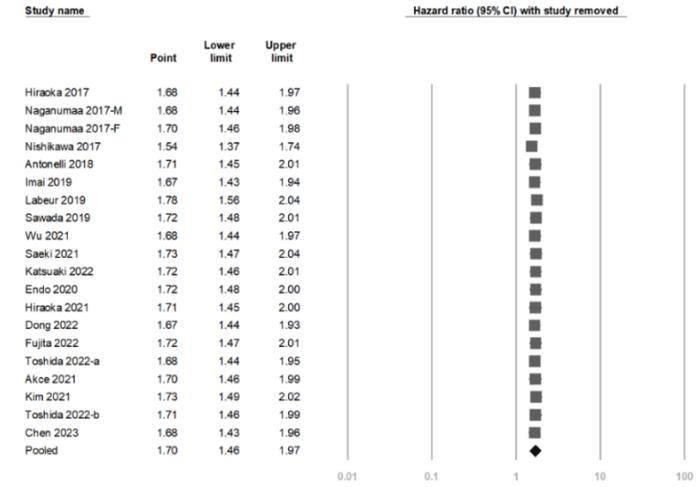

Figure S2. Sensitivity analysis

(A) Prevalence, (B) Overall survival, (C) Progression-free survival

(A) Prevalence

(B) overall survival

(C) Progression-free survival
