Supplemental Figure 4. Select gene signature associations for EBV-associated cell clusters in E1 and E2: the bubble-plot illustrates select signature enrichments across the identified cell clusters for E1 and E2, upper part of figure illustrates signature terms related to B-cell differentiation states, lower part of figure illustrates signatures related to selected pathways as indicated on the left of the figure. Significant enrichment is illustrated on a blue to red colour scale (Z-score) with bubble size reflecting FDR significance.
