Table S2. Description of risk models and participants

Author, year	Name of model	Prediction time	Number of cases	Number of controls	Ancestry*
Models based only on genetic risk factors					
Allman, 2015a [43]	NA	5-year risk	421	7118	African American
Allman, 2015b [43]	NA	5-year risk	147	3216	Hispanic
Dite, 2016 [48] – ER-positive	NA	5-year risk	261	856	European ancestry
Dite, 2016 [48] – ER-negative	NA	5-year risk	155	856	European ancestry
Du, 2021 [49] – Overall BC	NA	Lifetime risk [†]	9,241	10,193	African ancestry
Du, 2021 [49] – ER-positive	NA	Lifetime risk [†]	4,299	10,193	African ancestry
Du, 2021 [49] – ER-negative	NA	Lifetime risk [†]	2,636	10,193	African ancestry
Gao, 2022 [67] – Overall BC	NA	10-year and lifetime [‡] risk	9235	10,184	African ancestry
Gao, 2022 [67] – ER-positive	NA	10-year and lifetime [‡] risk	4295	10,184	African ancestry
Gao, 2022 [67] – ER-negative	NA	10-year and lifetime [‡] risk	2635	10,184	African ancestry
Ho, 2020a [50] – Overall BC	NA	10-year and lifetime [‡] risk	15,755	16,493	Asian (Chinese, Indian, Malay)
Ho, 2020a [50] – ER-positive	NA	10-year and lifetime [‡] risk	10,477	16,483	Asian (Chinese, Indian, Malay)
Ho, 2020a [50] – ER-negative	NA	10-year and lifetime [‡] risk	4,764	16,483	Asian (Chinese, Indian, Malay)
Ho, 2020b [50] – Overall BC	NA	10-year and lifetime [‡] risk	1507	1212	Asian American
Ho, 2020b [50] – ER-positive	NA	10-year and lifetime [‡] risk	1022	1212	Asian American
Ho, 2020b [50] – ER-negative	NA	10-year and lifetime [‡] risk	280	1212	Asian American
Ho, 2022a [68]	Validation set	10-year and lifetime [‡] risk	6392	6638	East Asian
Ho, 2022b [68]	Prospective test set	10-year and lifetime [‡] risk	1592	89,898	East Asian
Ho, 2022c [68]	Validation set	10-year and lifetime [‡] risk	585	1018	South Asian (Indian)
Hou, 2022 [70] – Overall BC	Validation set	5-year risk	427	374	Asian
Hou, 2022 [70] – ER-positive	Validation set	5-year risk	290	374	Asian
Hou, 2022 [70] – ER-negative	Validation set	5-year risk	124	374	Asian
Liu, 2021a [74]	NA	Lifetime risk [‡]	3960	29,634	European ancestry
Liu, 2021b [74]	NA	Lifetime risk [‡]	274	3,527	African ancestry
Liu, 2021c [74]	NA	Lifetime risk [‡]	147	2,049	Latinx ancestry
Mavaddat, 2015 [56]	NA	10-year risk	33,673	33,381	European ancestry
Mavaddat, 2019a [12] – Overall BC	Validation set	10-year risk	5,159	5,285	European ancestry
Mavaddat, 2019a [12] – ER-positive	Validation set	10-year risk	4,233	5,285	European ancestry
Mavaddat, 2019a [12] – ER-negative	Validation set	10-year risk	926	5,285	European ancestry
Mavaddat, 2019b [12] – Overall BC	Prospective test set	10-year risk	11,428	18,323	European ancestry

Mavaddat, 2019b [12] – ER-positive	Prospective test set	10-year risk	7,992	18,323	European ancestry
Mavaddat, 2019b [12] – ER-negative	Prospective test set	10-year risk	1,259	18,323	European ancestry
Wen, 2016 [64]	NA	Lifetime risk [‡]	11,905	11,662	East Asian
Yang X., 2022 [23]	NA	5-year risk	676	15,502	European ancestry
Yang Y., 2022a [72]	Validation set	10-year risk	1426	1323	Asian
Yang Y., 2022b [72]	Prospective set	10-year risk	368	736	Asian
Models based on genetic risk factors and non-genetic risk factors					
Allman, 2015c [43]	BCRAT	5-year risk	421	7118	African American
Allman, 2015d [43]	IBIS	5-year risk	421	7118	African American

Pal Choudhury, 2021b** [25]	Tyrrer-Cuzick v.8	5-year risk	619 ⁱ	718 ^j	European ancestry
Shieh, 2016a [59]	BCSC v2	5-year risk	448	448	European ancestry, East Asian and Hispanic
Shieh, 2016b [59]	BCSC v2	5-year risk	387	387	European ancestry
Shieh, 2016c [59]	BCSC v2	5-year risk	51	51	East Asian
Shieh, 2017 [60]	BCSC	5-year risk	110	214	European ancestry
Starlard-Davenport, 2018 [61]	BCRAT	5-year risk and lifetime risk ⁺⁺	319	559	African American
Vachon, 2015 [63]	BCSC	5-year risk	456	1166	European ancestry
van Veen, 2018 [62]	Tyrrer-Cuzick v6	10-year risk	466	8897	European ancestry
Yang X., 2022 [23]	BOADICEA V.6	5-year risk	280	5693	European ancestry
Yang Y., 2022b [72]	Prospective set	10-year risk	368	736	Asian
Zheng, 2010 [65]	NA	10-year risk	3039	3082	Asian

Abbreviations: BCSC = Breast Cancer Surveillance Consortium; BPC3 = Breast and Prostate Cancer Cohort Consortium; BOADICEA = Breast and Ovarian Analysis of Disease Incidence and Carrier Estimation Algorithm; BCRAT = Breast Cancer Risk Assessment Tool (Gail Model); IBIS = International Breast Intervention Study (Tyrrer-Cuzick model); iCARE-Lit = Individualized Coherent Absolute Risk Estimator based on literature review; iCARE-BPC3 = Individualized Coherent Absolute Risk Estimator based on BPC3 analysis

Notes: A streamlined model includes first degree family history and age; NA indicates that the model was not based on a pre-existing tool

* Indicates the most prevalent ancestry group on which the PRS was derived;

** Models are presented stratified by age groups.

[†] Lifetime risk is an estimated risk until the age of 85; ⁺⁺ Lifetime risk is an estimated risk until the age of 90;

[‡] Lifetime risk is an estimated risk until the age of 80;

^a = 333, 332 and 307 cases were aged 35 to 39, 40 to 49 and 50 to 59, respectively; ^b = 182, 151 and 130 non cases were aged 35 to 39, 40 to 49 and 50 to 59, respectively; ^c = 891 cases were aged <50 and 5,920 were aged ≥50; ^d = 54,058 non cases were aged <50 and 232,743 were aged ≥50; ^e = 235 cases were aged <65 and 173 were age ≥65; ^f = 1,732 controls were aged <65 and 1,366 were age ≥65; ^g = 263 cases were aged <50 and 598 were aged ≥50; ^h = 27,967 non cases were aged <50 and 36,044 were aged ≥50; ⁱ = 207 cases were aged <50 and 412 were aged ≥50; ^j = 233 non cases were aged <50 and 485 were aged ≥50.

Table S3. Predictive performance of models in individual studies

Author, year	Measure of discrimination	Discriminative ability (95% CI)	Calibration	Reclassification (95% CI)
Models based on genetic risk factors alone				
Allman, 2015a [43]	AUC	0.550 (0.530 – 0.580)	$\chi^2 = 6.0, P = 0.6$	
Allman, 2015b [43]	AUC	0.590 (0.540 – 0.640)	$\chi^2 = 20.8, P = 0.01$	
Allman, 2021a [44]	AUC	0.550 (0.525 – 0.584)	NA
