

Figure S2. Growth of PDS cultured in PnExP medium. Representative images of Normal (A) and tumor (B) PDS established from the lung tissues of a patient diagnosed with a lung SqCC after 7 days of culture in PnExP medium. Violin plots of normal PDS (C) and adenocarcinoma PDS (D) diameter over 14 days of culture. The data represent the median $\pm$ quartiles of 15 to 20 spheroids.
