

Supplementary Figure S2: Segregation of AOIs in protein a 392 nalysis. (A) Principal component analysis visualized in a three-dimensional tSNE plot. All Pan-CK+ AOIs tightly cluster (red box). AOIs from progressing patients and non-progressing patients do not strongly separate. Purple circles = all ROIs from progressive patients corresponding to group A. Green symbols = all ROIs from group B; non progressors patients. (B) Heatmap view of unsupervised clustering of protein AOIs. Pan-CK status perfectly segregated AOIs whereas progressing patients and non progressing patients had less segregation in both pan-CK+ epithelial and pan-CK- stromal AOIs
