Supplementary Materials:

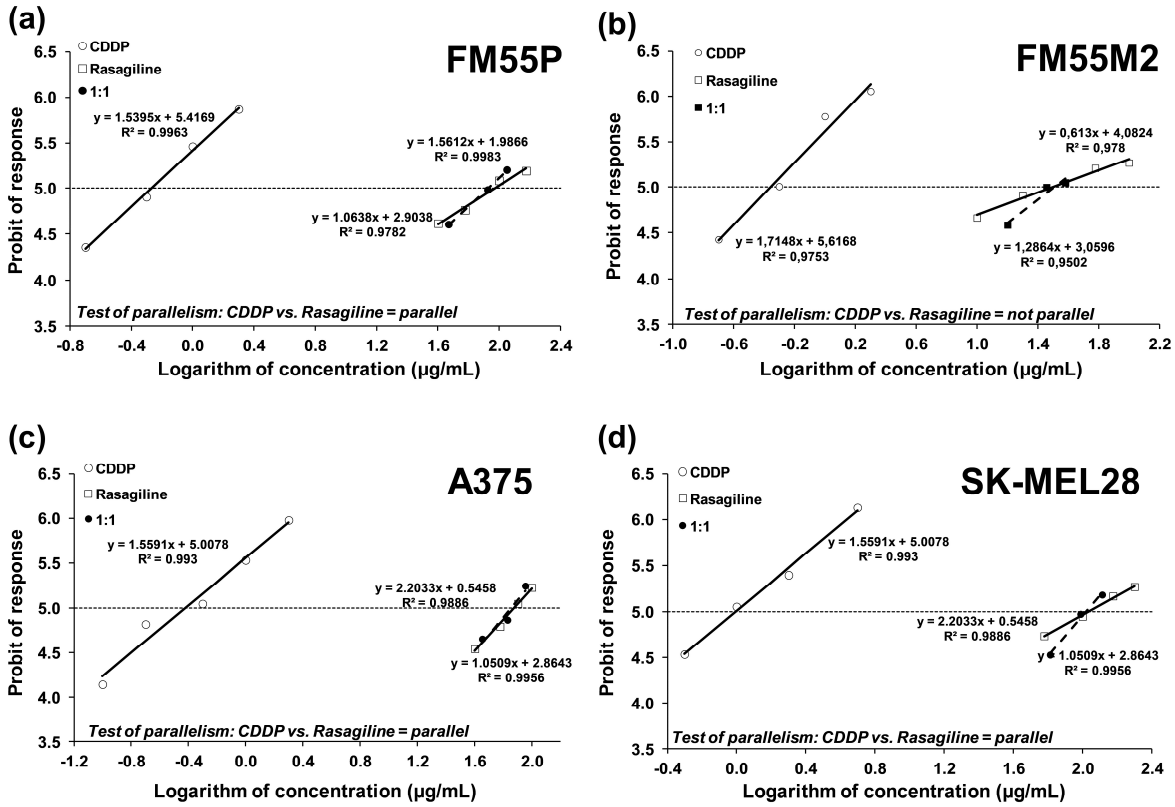

Figure S1: Log-probit concentration–effect lines for rasagiline and cisplatin (CDDP) administered alone and in combination in the fixed-ratio of 1:1, illustrating the anti-proliferative effects of the drugs in the malignant melanoma cell lines: FM55P (a), FM55M2 (b), A375 (c), and SK-MEL28 (d) measured in the MTT assay;

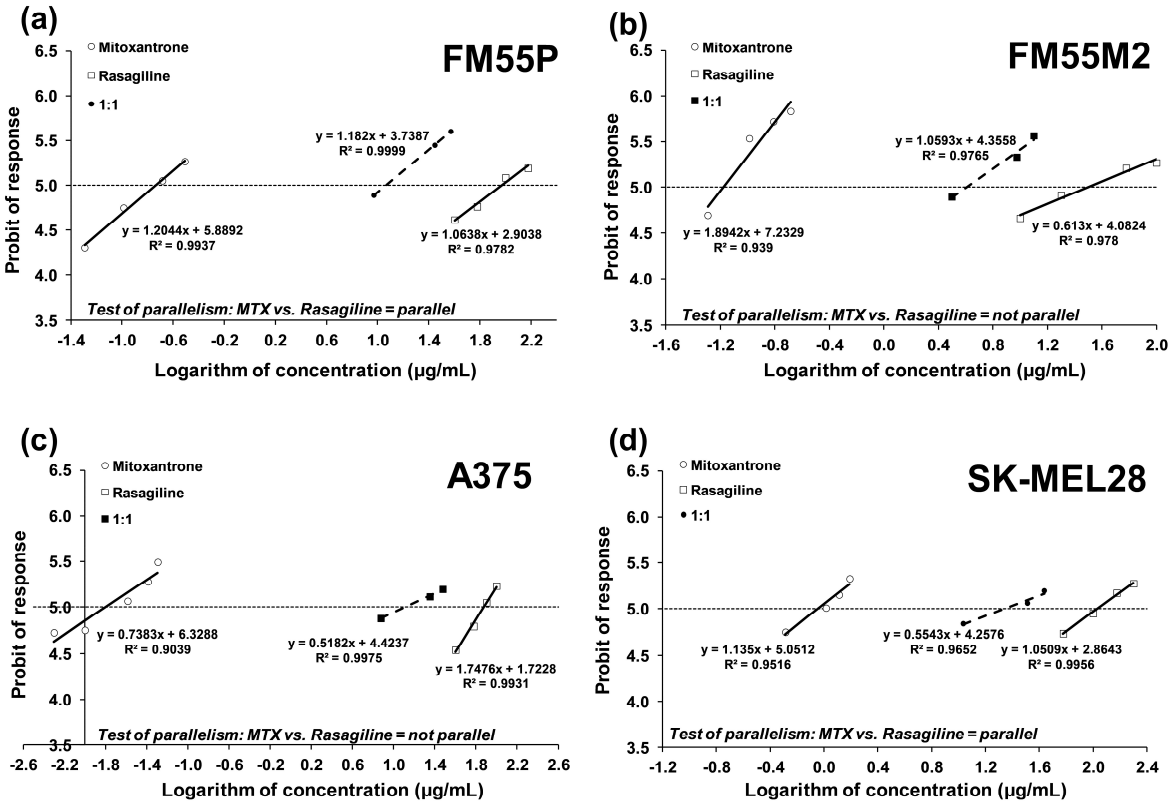

Figure S2: Log-probit concentration–effect lines for rasagiline and mitoxantrone (MTX) administered alone and in combination in the fixed-ratio of 1:1, illustrating the anti-proliferative effects of the drugs in the malignant melanoma cell lines: FM55P (a), FM55M2 (b), A375 (c), and SK-MEL28 (d) measured in the MTT assay.
