

Figure S1. Expression of CK8, vimentin, and CD45 on endometrial cells cultured in vitro. Cells isolated from cancer (E10-18, E12-23, E13-24) and noncancerous (E1-6, E17-33, E22-38) endometrium were stained for CK8, vimentin and CD45 (green) and co-stained with DAPI (blue). Scale bar 100 μ m; Arrow —intense positive, arrowhead —weak positive; star —negative staining for vimentin.
