Description

As shown in Figure S1 and Table S1, the total ion chromatogram (TIC) and list of compounds were detected by Gas Chromatograph Mass Spectrometer (GC-MS).

Differential expressed metabolites in scent glands during the breeding and non-breeding seasons in the positive ion mode and negative ion mode were shown in Table S2 and Table S3.

The MS/MS spectrum of the fragment ions from MALDI and LC at m/z 496.3 were shown in Figure S2 and S4. Signals of ion fragments revealed the molecular structure of LysoPC (16:0).

The MS/MS spectrum of the fragment ions from MALDI and LC at m/z 756.5 were shown in Figure S3 and S5. Signals of ion fragments revealed the molecular structure of PC (32:0).
