

Western blot

Supplementary Figure 1. Images of whole blots against PDH, PDK4, CS, ACOX1, ACADM, ACC, FAS, ATGL, COX I, COX II, COX III, COX IV, ATP synthase, PGC-1 α , and β -actin for tumor and adipose tissue. Each blot is representative of three independent trials and shows three representative bands per group (normal-weight women with benign tumors, overweight/obese women with benign tumors, normal-weight women with malignant tumors, and overweight/obese women with malignant tumors). for tumor tissue and adipose tissue. Three bands per group shown here represent three samples obtained by pooling nine samples from each group before loading.
