Supplementary Figure S2

The dendrogram and clustering analysis of control (Ctr) and UVA (18 J/cm²) irradiated melanoma cells treated with algae lipid extracts (3 ng/mL; *N.o., Nannochloropsis oceanica*; *C.a., Chlorococcum amblystomatis*) cultured *in vitro* in a three-dimensional model (3D). The results obtained for cell lysates are shown in panel A and FBS-free medium in panel B.
