

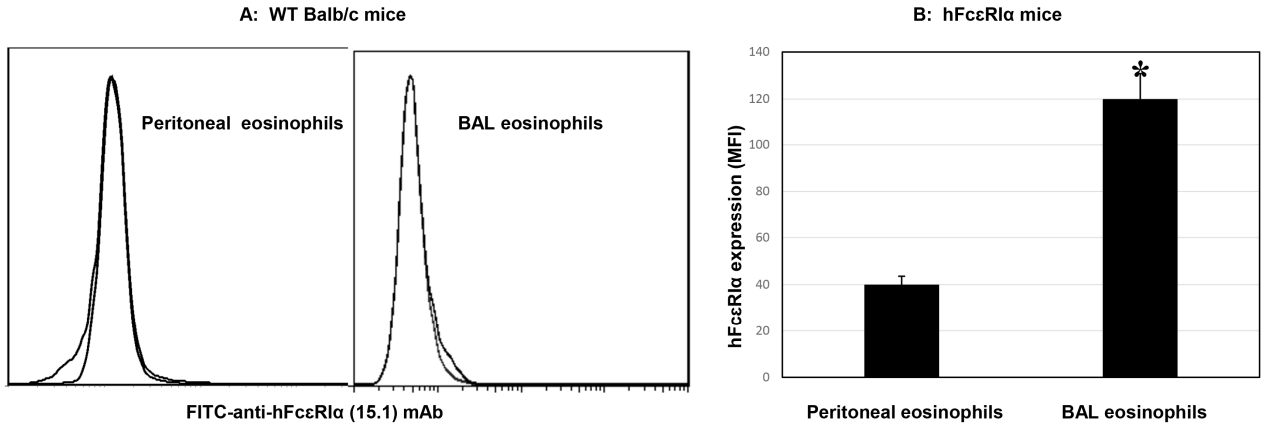

Figure S1. (A) No hFcεRIα (vs isotype control mAb) is detected on polymyxin-elicited peritoneal eosinophils and on BAL eosinophils of WT BALB/c mice. **(B)** The mean fluorescent intensity (MFI) obtained by flow cytometry indicates the expression levels of hFcεRIα on polymyxin-elicited peritoneal eosinophils and BAL eosinophils from hFcεRIα transgenic mice. Data represent means ± SD of three mice. *$p<0.01$ indicates statistical significance when comparing the BAL eosinophils with peritoneal eosinophils.
