Lagend:

Figure S1. Differentiation of THP-1 cells with PMA inducing agent. THP-1 cells ($1x10^6$) were incubated with RPMI-1640 culture medium and in the presence of the inducing agent Phorbol myristate acetate ester (PMA) in culture bottles for cell differentiation. **A** - THP-1 cells in their monocytic form in suspension (mϕFPRs$^{+/+}$). **B** - Differentiated THP-1 cells (MϕFPRs$^{-/-}$), adhered in the presence of only RPMI-1640 culture medium.
