

Table S4. Discriminant analysis of the division of children with Down syndrome (DS) into two groups based on the proportionality of their anthropological measures as disproportionate cephalization index ($CI \geq 1.1$) or proportionate ($CI < 1.1$).

DA Clasification Results ¹				
Category	Predicted Group Membership		Total	
	$CI < 1.1$	$CI \geq 1.1$		
Original Count				
$CI < 1.1$	26	4	30	
$CI \geq 1.1$	5	21	26	
%				
$CI < 1.1$	86.7	13.3	100.0	
$CI < 1.1$	19.2	80.8	100.0	

¹83.9% of original grouped cases were correctly classified.

83.9% children had correct classifications, of which 86.7% was correctly classified as proportionate CI, and 5 (13.3%) were wrongly classified as disproportionate CI, 80.8% was correctly classified and 4 (19.2%) were wrongly classified.
