Table S1. Linear regression of all morphometric traits measured of the star-shaped pored of *Minibiotus citlaliensis* in relation to buccal tube length (BTL). Data log–log transformed. N = sample size, b = slope, a* = intercept, r² = coefficient of correlation, t= (b)1/ SE of b, p = probability that b differs from slope of 1. Traits with p < 0.05 are allometric and are indicated in bold.

Table S2. Linear regression of all morphometric traits measured of the star-shaped pores of *Minibiotus sidereus* in relation to buccal tube length (BTL). Data log–log transformed. N = sample size, b = slope, a^* = intercept, r^2 = coefficient of correlation, $t = (b-1)/SE$ of b, p = probability that b differs from slope of 1. Traits with $p < 0.05$ are allometric and are indicated in bold.
