

Supplementary material

Table S1. Tukey's Honest Significant Difference (Tukey HSD) test for those biological and environmental response variables that exhibited significant main effects of the mud crab *Rhithropanopeus harrisii* or interactive effects of the invader and temperature in the analysis of variance (ANOVA). The contrast between different treatments (CW: control, winter; CS: control, summer; RhW: crab, winter; RhS: crab, summer), mean estimates (estimates), standard errors (SE), degrees of freedom (DF), the statistic (t-value) and associated significance (p-value) are presented. Logarithmically transformed variables are indicated with log

Response variable	Contrast	Estimate	SE	DF	t-value	p-value
log(abundance of bivalves)	CW - RhW	0.01	0.72	16	0.01	1.0000
	CW - CS	0.02	0.72	16	0.03	1.0000
	CW - RhS	3.08	0.72	16	4.26	0.0030
	RhW - CS	0.01	0.72	16	0.02	1.0000
	RhW - RhS	3.07	0.72	16	4.24	0.0003
	CS - RhS	3.06	0.72	16	4.23	0.0003
log(abundance of gastropods)	CW - RhW	0.19	0.30	16	0.64	0.9173
	CW - CS	-1.50	0.30	16	-5.04	0.0006
	CW - RhS	-0.31	0.30	16	-1.05	0.7256
	RhW - CS	-1.69	0.30	16	-5.68	0.0002
	RhW - RhS	-0.50	0.30	16	-1.69	0.3621
	CS - RhS	1.19	0.30	16	4.00	0.0052
log(dry weight of bivalve)	CW - RhW	-0.07	0.47	16	-0.15	0.9988
