

## Title

Genomic patterns of Iberian wild bees reveal levels of diversity, differentiation and population structure supporting the "refugia within refugia" hypothesis.

## Supplementary Material

### Supplementary information

#### Tables

Table S1: Information of sampled bees. Specimens that have a longer ID were samples not used in the analysis and for that reason their field code was not changed.

Table S2: Distribution of samples across sampling area. For each species the sampling sites, the number of samples per sampling site and the total number of individuals retained after filtering (Total) is given.

Species	And	Bej	Bet	Cat	Clm	Fvf	Fzz	Gal	Gua
<i>A. agilissima</i>	0	0	4	1	0	0	1	4	0
<i>A. flavipes</i>	6	4	3	4	4	3	0	4	0
<i>L. malachurum</i>	4	0	3	4	1	4	4	0	4
Species	Jac	Mal	Mgr	Ode	Sda	Sin	Sma	Total	
<i>A. agilissima</i>	2	0	0	0	0	0	0	<b>12</b>	
<i>A. flavipes</i>	4	6	4	4	1	4	6	<b>57</b>	
<i>L. malachurum</i>	0	0	3	3	1	3	1	<b>35</b>	

Table S3: Filtering SNPs. From left to right for each species: number of single nucleotide polymorphic sites (SNPs) before filtering with *vcftools*; number of SNPs after filtering with *vcftools* with only one random SNP per locus and with all SNPs per locus; number of sampled individuals and number of analyzed individuals.

Species	SNPs before filtering	SNPs after filtering		Sampled Individuals	Analyzed Individuals
		One random SNP per locus	All SNPs per locus		
<i>A. agilissima</i>	43451	14230	26321	16	12
<i>A. flavipes</i>	62620	27822	543914	59	57
<i>L. malachurum</i>	72772	33810	256976	43	35

Table S4: Summary statistics by populations: Number of individuals per population (**Npop**); Observed heterozygosity (**Ho**); Expected heterozygosity (**He**); Inbreeding coefficient (**F<sub>IS</sub>**); and Nucleotide diversity ( **$\pi$** ). For **Ho**, **F<sub>IS</sub>** and  **$\pi$**  it is provided the average value and respective standard deviation.

Species/Populations	Npop	Ho	He	F <sub>IS</sub>	$\pi$
