Supplementary Material

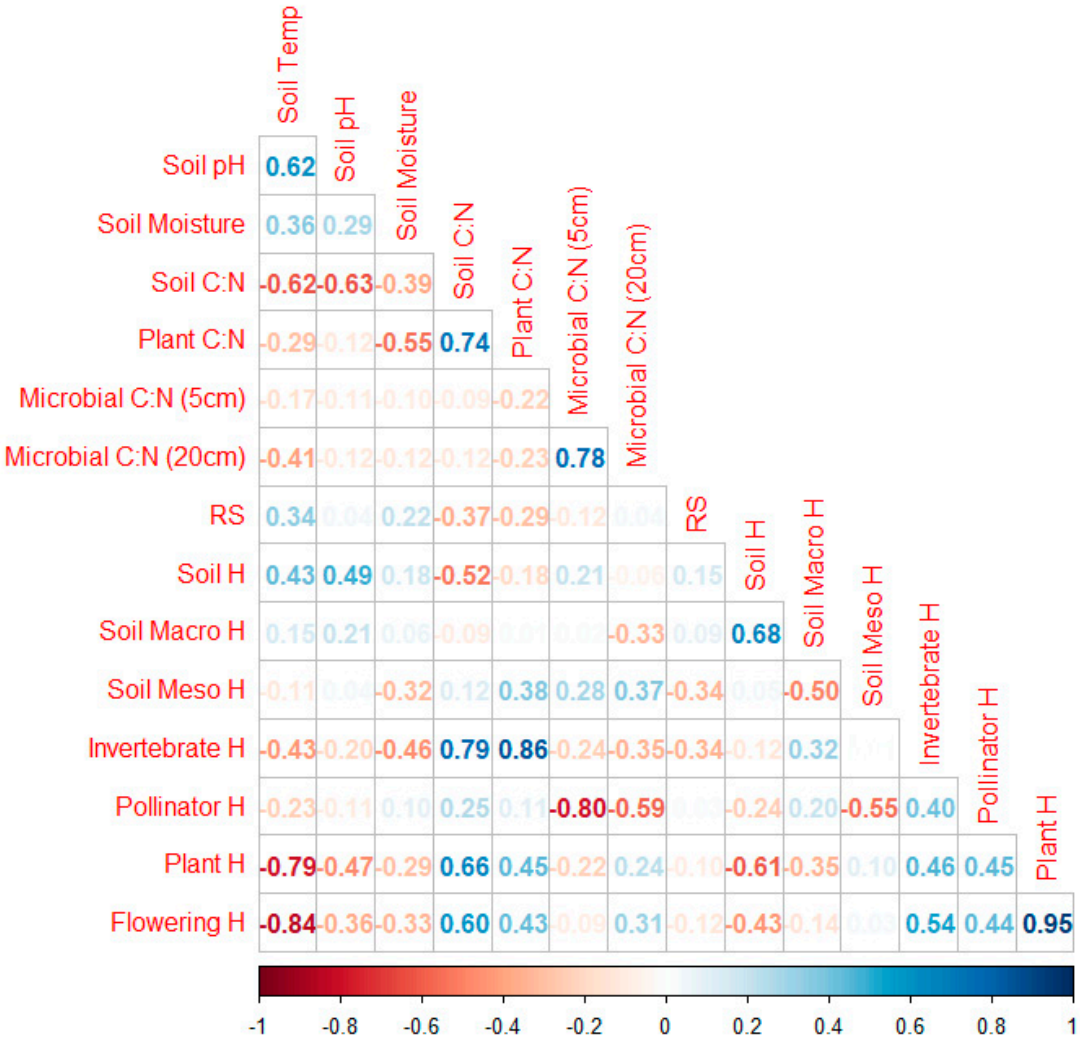

Figure S1. Correlation matrix between site characteristics and diversity measures

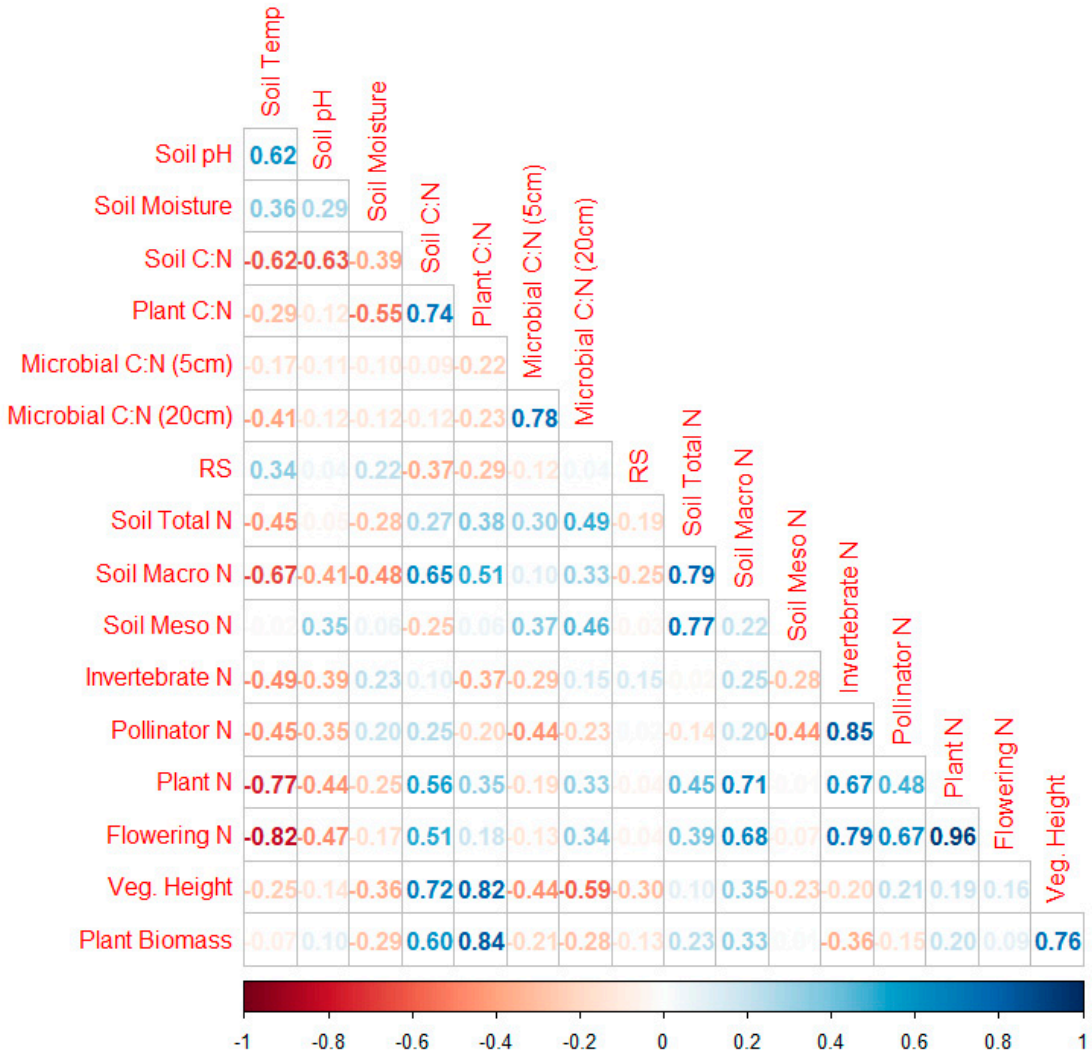

Figure S2. Correlation matrix between site characteristics and abundance (N) and biomass measures.

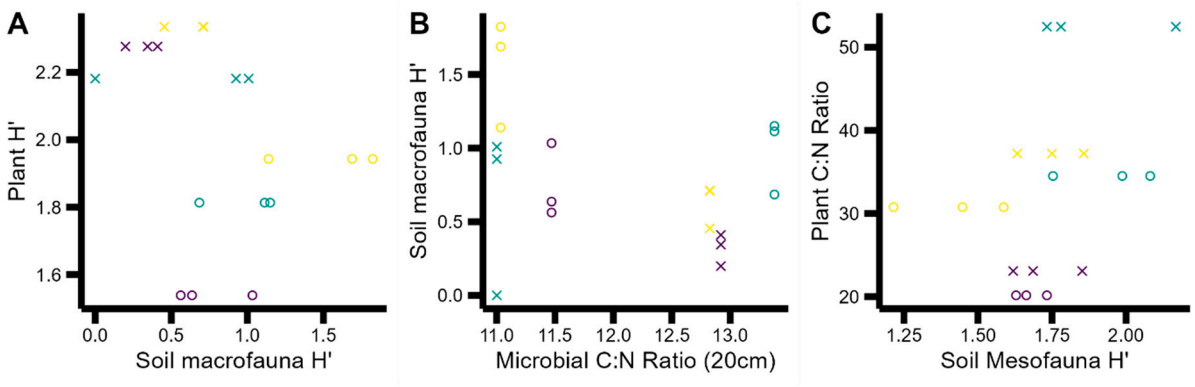

Figure S3. Non-significant relationships between site characteristics and diversity metrics across two sites (indicated by symbol shape: circles: Wildflower Trail, triangles: Sustainability Gardens) and three habitat types (indicated by symbol colours: purple: SMG, blue: TG, yellow: SF). A) Plant Shannon diversity index by soil macrofauna Shannon diversity index; B) soil macrofauna Shannon diversity index by microbial C:N ratio at 20cm depth and C) Plant C:N ratio by soil mesofauna Shannon diversity index.
