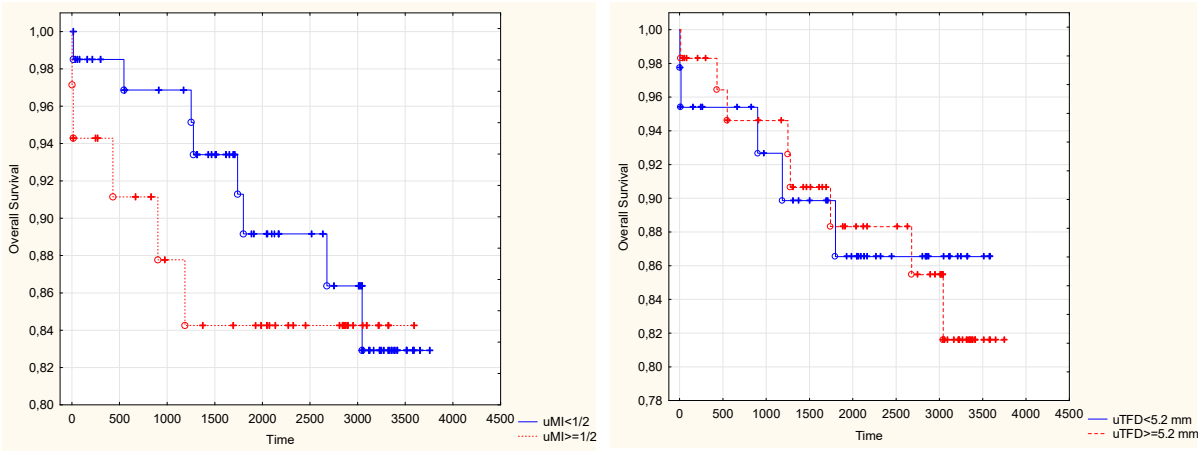

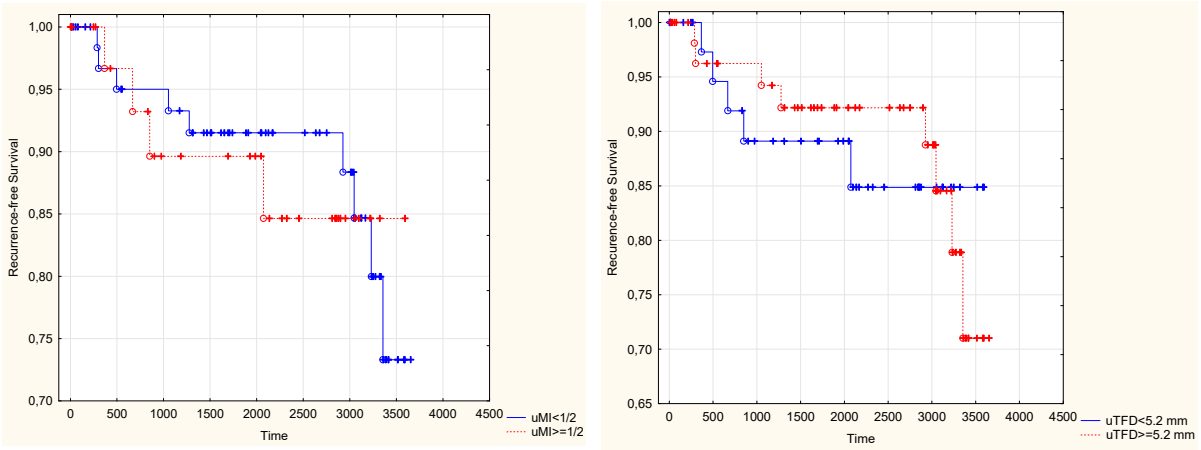

Figures S3-S4

Regarding uMI (less or equal- or over 1/2 or 50%) differences between survival curves are not statistically significant (Log-rank test, p=0.5949) (Figure S3a). Differences between survival curves according to uTFD (<5.2 mm, >= 5.2 mm) are not statistically significant (log-rank test, p=0.9225) (Figure S3b). Differences between recurrence-free survival curves regarding uMI were not statistically significant (log-rank test, p=0.7606) (Figure S4a). Differences between reference-free survival curves regarding uTFD were not statistically significant (log-rank test, p=0.8563) (Figure S4b).
