

Supplementary Results

Supplementary Figure S1. Ten-fold dilutions ranging from 10^9 to 10^3 copies of SARS-CoV-2 RNA were tested in triplicates using real-time RT-PCR. A standard curve of the (A) *N*, (B) *RdRP* and *S*, and (C) *E* was generated by plotting the Ct values on the y-axis and the log10 of the input on the x-axis.
