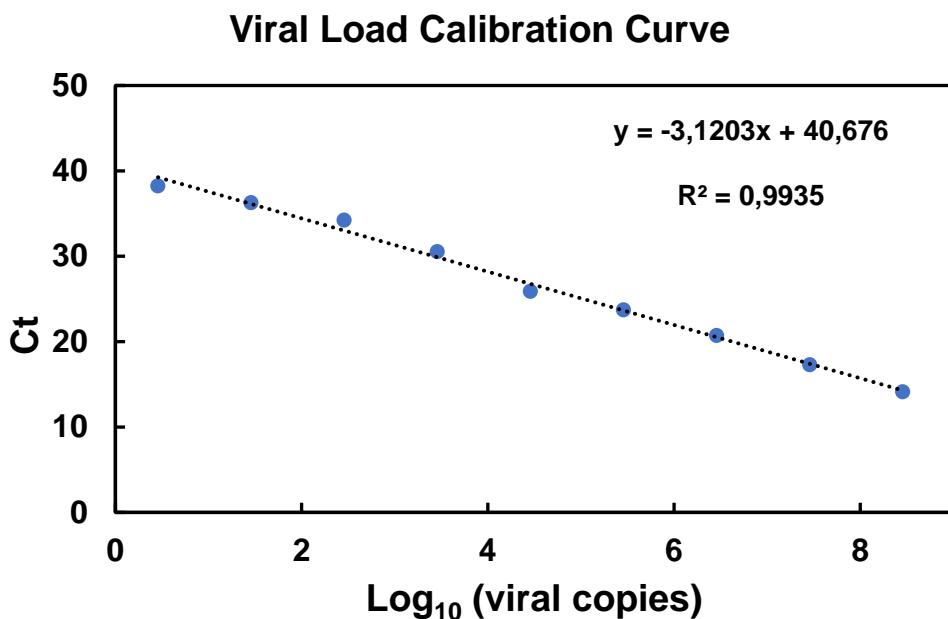

Figure S1. Calibration curve of the relationship between the number of viral copies (SARS-CoV-2) and Ct value from a diagnostic RT-qPCR. The calculation of the calibration line from the serial dilution of the 3180pb pUC series plasmid containing specific sequences of the viral E and RdRp genes detected by RT-qPCR related to the Ct value.

Table S1. Viral copy number ratio in each RNA dilution factor for samples positive for SARS-CoV-2.

Number of viral copies / μ l of RNA	Dilution
